说明

CDCLVP111 时钟驱动器使用最小的时分偏斜将 LVPECL 输入的一个差分时钟对 (CLK0，CLK1) 分频为差分 LVPECL 时钟 (Q0，Q9) 输出的十个对。 CDCLVP111 可接受两个时钟源进入同一个输入复用器。 CDCLVP111 专门设计用于驱动器 50Ω 传输线路。 当一个输出引脚不被使用时，建议将其保持在开状态以减少功耗。 如果只使用差分对中的输出引脚中的一个，那么其它输出引脚必须被同样地端接至 50Ω。

如果要求单端输入运行，V_{BB}基准电压输出被使用。 在这种情况下，V_{BB}引脚应该被连接至$\overline{CLK0}$并由一个 10nF 电容器旁通至接地 (GND)。

然而，要实现高达 3.5GHz 的高速性能，强烈建议使用差分模式。

CDCLVP111 额定工作温度范围是 -55°C至 125°C。

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
