

LOW-VOLTAGE DUAL DIFFERENTIAL 1:5 LVPECL CLOCK DRIVER

Check for Samples: [CDCLVP215](#)

FEATURES

- 2x One Differential Clock Input Pair LVPECL to 5 Differential LVPECL Clock Outputs
- Fully Compatible With LVPECL/LVECL
- Supports a Wide Supply Voltage Range From 2.375 V to 3.8 V
- Open Input Default State
- Low-Output Skew (Typ 15 ps) for Clock-Distribution Applications
- V_{BB} Reference Voltage Output for Single-Ended Clocking
- Available in the QFN32 Package
- Frequency Range From DC to 3.5 GHz
- Pin-to-Pin Compatible With the MC100 Series EP111, LVEP210, ES6111, LVEP111

APPLICATIONS

- Designed for Driving 50- Ω Transmission Lines
- High Performance Clock Distribution

DESCRIPTION

The CDCLVP215 clock driver distributes two times one differential clock pair of LVPECL, (CLKA, CLKB) to 5 pairs of differential LVPECL clock (QA0..QA4, QB0..QB4) outputs with minimum skew for clock distribution. The CDCLVP215 specifies low output-to-output skew. The CDCLVP215 is specifically designed for driving 50- Ω transmission lines. When an output pair is not used, leaving it open is recommended to reduce power consumption. If only one of the output pairs is used, the other output pair must be identically terminated to 50 Ω .

The V_{BB} reference voltage output is used if single-ended input operation is required. In this case, the V_{BB} pin should be connected to $\overline{\text{CLKA}}$ or $\overline{\text{CLKB}}$ and bypassed to GND via a 10-nF capacitor.

However, for high-speed performance up to 3.5 GHz, the differential mode is strongly recommended.

The CDCLVP215 is characterized for operation from -40°C to 85°C .

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

- Output skew is calculated as the greater of: The difference between the fastest and the slowest t_{PLHn} (n = n0, n1,...n4) or the difference between the fastest and the slowest t_{PHLn} (n = n0, n1,...n4).
- Part-to-part skew, is calculated as the greater of: The difference between the fastest and the slowest t_{PLHn} (n = n0, n1,...n4) across multiple devices or the difference between the fastest and the slowest t_{PHLn} (n = n0, n1,...n4) across multiple devices.
- Output skew is measured per the output group.

REVISION HISTORY

Changes from Original (April 2008) to Revision A	Page
• Changed Status from: Product Preview To: Production	1
• Changed Features bullet From: Fully Compatible With LVPECL/LVPECL To: Fully Compatible With LVPECL/LVECL	1
• Changed Features Bullet From: Single Supply Voltage Required ± 3.3 V or ± 2.5 V Supply To: Supports a Wide Supply Voltage Range From 2.375 V to 3.8 V	1
• Deleted PTN1111 from The Pin-to-Pin Features bullet	1
• Changed EP210 in The Pin-to-Pin Features bullet From: EP210 to LVEP210.	1
• Added Application bullet: High Performance Clock Distribution	1
• Changed paragraph - From: The bottom of the QFN32 To: The PowerPAD™ of the QFN32... ..	2
• Changed list item From: $\overline{\text{CLKn}}$ pull up resistor 31.4 k Ω To: $\overline{\text{CLKn}}$ pull up resistor 37.5 k Ω	2
• Changed Abs Max table - Negative supply voltage value From -0.3 to 4.6 To: -4.6 to 0.3	3
• Changed PACKAGE THERMAL IMPEDANCE max values.	3
• Changed LVECL DC ELECTRICAL CHARACTERISTICS values.	3
• Added to the input current Test Conditions: $V_{IH} = V_{CC}$, $V_{IL} = V_{CC} - 2V$	3
• Changed From: Cross point of input 9 average (V_{IH} , V_{IL}) To: DC offset relative to V_{EE}	3
• Changed LVPECL DC ELECTRICAL CHARACTERISTICS values.	4
• Added to the input current Test Conditions: $V_{IH} = V_{CC}$, $V_{IL} = V_{CC} - 2V$	4
• Changed From: Cross point of input 9 average (V_{IH} , V_{IL}) To: DC offset relative to V_{EE}	4
• Changed AC ELECTRICAL CHARACTERISTICS values.	5
• Changed From: Cycle to Cycle RMS jitter To: Additive phase jitter.	5
• Changed Output rise and fall time (20%, 80%) MIN Value From: 100 To: 90	5

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
