

ESD751 和 ESD761 24V 单通道 ESD 保护二极管

1 特性

- IEC 61000-4-2 4 级 ESD 保护：
 - $\pm 22\text{kV}$ 或 $\pm 15\text{kV}$ 接触放电
 - $\pm 22\text{kV}$ 或 $\pm 15\text{kV}$ 气隙放电
- 强大的浪涌保护：
 - IEC 61000-4-5 (8/20 μs) : 2.8A 或 1.8A
- 24V 工作电压
- 双向 ESD 保护
- 低钳位电压可保护下游元件
- 温度范围：-55°C 至 +150°C
- I/O 电容 = 1.6pF 或 1.1pF (典型值)
- 采用标准引线式封装和 0402 尺寸封装：SoD-523 (DYA) 和 X1SON (DPY)
- 引线式封装，用于自动光学检测 (AOI)

2 应用

- USB 电力传输 (USB-PD)
 - VBUS 保护
 - I/O 保护
- 工业控制网络：
 - DeviceNet
 - 智能配电系统
 - 4/20mA 电路
 - PLC 浪涌保护
 - ADC 浪涌保护

3 说明

ESD751 和 ESD761 是适用于 USB 电力传输 (USB-PD) 的单通道低电容双向 ESD 保护器件。这些器件旨在耗散超过 IEC 61000-4-2 国际标准所规定最高水平 (分别为 $\pm 22\text{kV}$ 接触放电、 $\pm 22\text{kV}$ 气隙放电，以及 $\pm 15\text{kV}$ 接触放电、 $\pm 15\text{kV}$ 气隙放电) 的接触 ESD 冲击。低动态电阻和低钳位电压有助于保护系统免受瞬态事件的影响。这种保护至关重要，因为工业系统对鲁棒性和可靠性的要求很高。

7 Detailed Description

7.1 Overview

The ESD751 and ESD761 are single-channel bidirectional ESD diodes. These devices can dissipate ESD strikes above the maximum level specified by the IEC 61000-4-2 standard. The low capacitance between the I/O pins makes these devices suitable for slower speed signals such as USB-PD or industrial I/O applications. The surge current capability is suitable for VBUS protection or industrial I/Os requiring 2.8 A of surge current protection.

7.2 Functional Block Diagram

7.3 Feature Description

These clamping devices have a small dynamic resistance, which makes the clamping voltage low when the devices are actively protecting other circuits. The breakdown is bidirectional so these protection devices are a good fit for applications requiring positive and negative polarity protection. Low leakage allows the diode to conserve power when working below the V_{RWM} . The temperature range of -55°C to $+150^{\circ}\text{C}$ makes these ESD devices work at extensive temperatures in most environments. The leaded SOD-523 package is good for applications requiring automatic optical inspection (AOI).

7.3.1 IEC 61000-4-5 Surge Protection

The I/O pins can withstand surge events up to 2.8 A and 1.8 A (8/20 μs waveform) for the ESD751 and ESD761 respectively.

7.3.2 I/O Capacitance

The capacitance between the I/O pins is 1.6 pF and 1.1 pF for the ESD751 and ESD761 respectively. The capacitance of these devices support data rates up to 1 Gbps.

7.4 Device Functional Modes

The ESD751 and ESD761 are single channel passive clamps that have low leakage during normal operation when the voltage between I/O and GND is below V_{RWM} , and activate when the voltage between I/O and GND goes above V_{BR} . When the voltages on the protected lines fall below the V_{HOLD} , the device reverts back to the low leakage passive state

8 Application and Implementation

备注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

8.1 Application Information

The ESD751 and ESD761 are single channel TVS diodes which are used to provide a path to ground for dissipating ESD events on USB-PD or industrial I/O lines. As the current from ESD passes through the TVS, only a small voltage drop is present across the diode. This is the voltage presented to the protected IC. The low R_{DYN} of the triggered TVS holds this voltage, V_{CLAMP} , to a safe level for the protected IC.

8.2 Typical Application

图 8-1. Typical Application

8.2.1 Design Requirements

For this design example, the ESD751 and ESD761 are used to provide ESD protection on a USB-PD connector. 表 8-1 lists the known design parameters for this application.

表 8-1. Design Parameters for Typical Applications

Design Parameter	Value
Diode configuration	Bidirectional
VBUS Voltage	+ 20 V
V_{IO} differential signal range	± 3.3 V
V_{RWM}	± 24 V
Short to VBUS event on V_{IO}	± 20 V
Data rate	Up to 480 Mbps

8.2.2 Detailed Design Procedure

The ESD751 and ESD761 have a V_{RWM} of ± 24 V to protect the diode from being damaged during a short event that can occur when one of the USB-PD slower speed lines (CC1, CC2, SBU1, SBU2, D+, and D-) is shorted to VBUS. The bidirectional characteristic ensures both positive and negative polarity are protected. The low capacitance of 1.7 pF or less permits data rates up to 480 Mbps, which allows the designer to meet the requirements for the D+ and D- signals. These devices have an IPP = 2.8 A and 1.8 A (8/20 μ s), respectively. The surge current capability of these devices is suitable for protecting the VBUS power rail.

9 Power Supply Recommendations

These devices are passive TVS diode-based ESD protection devices, therefore there is no requirement to power them. Ensure that the maximum voltage specifications for each pin is not violated.

10 Layout

10.1 Layout Guidelines

- The optimum placement is as close to the connector as possible.
 - EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures.
 - The PCB designer must minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.
- Route the protected traces as straight as possible.
- Eliminate any sharp corners on the protected traces between the TVS and the connector by using rounded corners with the largest radii possible.
 - Electric fields tend to build up on corners, increasing EMI coupling.
- If pin 1 or 2 is connected to ground, use a thick and short trace for this return path.

11.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
