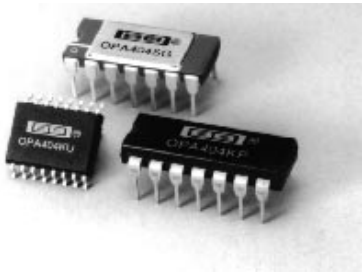
BURR-BROWN®



OPA404

Quad High-Speed Precision *Difet*® OPERATIONAL AMPLIFIER

FEATURES

- WIDE BANDWIDTH: 6.4MHz
- HIGH SLEW RATE: 35V/μs
- LOW OFFSET: ±750μV max
- LOW BIAS CURRENT: ±4pA max
- LOW SETTLING: 1.5μs to 0.01%
- STANDARD QUAD PINOUT

APPLICATIONS

- PRECISION INSTRUMENTATION
- OPTOELECTRONICS
- SONAR, ULTRASOUND
- PROFESSIONAL AUDIO EQUIPMENT
- MEDICAL EQUIPMENT
- DETECTOR ARRAYS

DESCRIPTION

The OPA404 is a high performance monolithic ***Difet***®(dielectrically-isolated FET) quad operational amplifier. It offers an unusual combination of very-low bias current together with wide bandwidth and fast slew rate.

Noise, bias current, voltage offset, drift, and speed are superior to BIFET® amplifiers.

Laser-trimming of thin-film resistors gives very low offset and drift—the best available in a quad FET op amp.

The OPA404's input cascode design allows high precision input specifications and uncompromised high-speed performance.

Standard quad op amp pin configuration allows upgrading of existing designs to higher performance levels. The OPA404 is unity-gain stable.

ORDERING INFORMATION

MODEL	PACKAGE	TEMPERATURE RANGE
OPA404KP	14-Pin Plastic DIP	0°C to +70°C
OPA404KU(1)	16-Pin Plastic SOIC	0°C to +70°C
OPA404AG	14-Pin Ceramic DIP	–25°C to +85°C
OPA404BG	14-Pin Ceramic DIP	–25°C to +85°C
OPA404SG	14-Pin Ceramic DIP	–55°C to +125°C

NOTE: (1) OPA404KU may be marked OPA404U.

PACKAGE INFORMATION

MODEL	PACKAGE	PACKAGE DRAWING NUMBER(1)
OPA404KP	14-Pin Plastic DIP	010
OPA404KU(2)	16-Pin Plastic SOIC	211
OPA404AG	14-Pin Ceramic DIP	169
OPA404BG	14-Pin Ceramic DIP	169
OPA404SG	14-Pin Ceramic DIP	169

NOTE: (1) For detailed drawing and dimension table, please see end of data sheet, or Appendix D of Burr-Brown IC Data Book. (2) OPA404KU may be marked OPA404U.

ABSOLUTE MAXIMUM RATINGS

Supply ..... ±18VDC
Internal Power Dissipation(1) 1000mW
Differential Input Voltage(2) ..... ±36VDC
Input Voltage Range(2) ..... ±18VDC
Storage Temperature Range ... P, U = –40°C/+125°C, G = –65°C/+150°C
Operating Temperature Range .. P, U = –25°C/+85°C, G = –55°C/+125°C
Lead Temperature (soldering, 10s) ..... 300°C
SOIC (soldering, 3s) ..... +260°C
Output Short-Circuit Duration(3) ..... Continuous
Junction Temperature ..... +175°C

NOTES: (1) Packages must be derated based on θ_{JC} = 30°C/W or θ_{JA} = 120°C/W. (2) For supply voltages less than ±18VDC the absolute maximum input voltage is equal to: 18V > V_{IN} > $-V_{CC}$ – 8V. See Figure 2. (3) Short circuit may be to power supply common only. Rating applies to +25°C ambient. Observe dissipation limit and T_J.

APPLICATIONS INFORMATION

OFFSET VOLTAGE ADJUSTMENT

The OPA404 offset voltage is laser-trimmed and will require no further trim for most applications. If desired, offset voltage can be trimmed by summing (see Figure 1). With this trim method there will be no degradation of input offset drift.

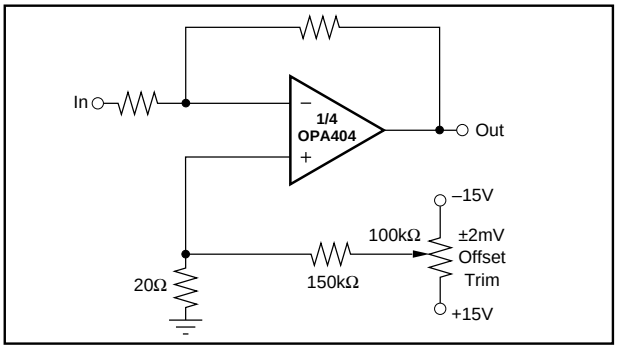

FIGURE 1. Offset Voltage Trim.

INPUT PROTECTION

Conventional monolithic FET operational amplifiers require external current-limiting resistors to protect their inputs against destructive currents that can flow when input FET gate-to-substrate isolation diodes are forward-biased. Most BIFET amplifiers can be destroyed by the loss of $-V_{CC}$.

Unlike BIFET amplifiers, the ***Difet*** OPA404 requires input current limiting resistors only if its input voltage is greater than 8 volts more negative than $-V_{CC}$. A 10kΩ series resistor will limit the input current to a safe value with up to ±15V input levels even if both supply voltages are lost. (See Figure 2 and Absolute Maximum Ratings).

Static damage can cause subtle changes in amplifier input characteristics without necessarily destroying the device. In precision operational amplifiers (both bipolar and FET types), this may cause a noticeable degradation of offset voltage and drift.

Static protection is recommended when handling any precision IC operational amplifier.

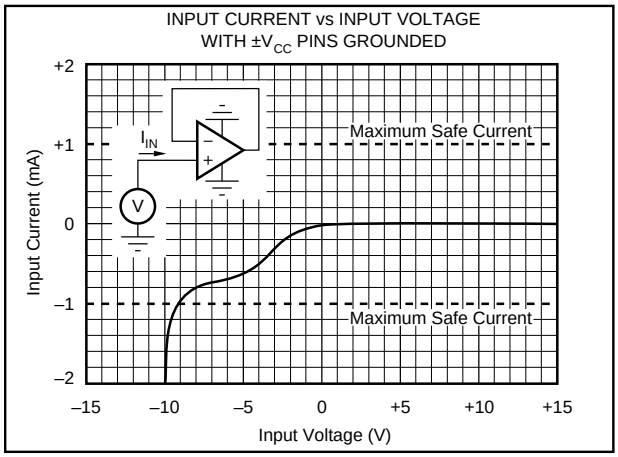

FIGURE 2. Input Current vs Input Voltage with $\pm V_{CC}$ Pins Grounded.

GUARDING AND SHIELDING

As in any situation where high impedances are involved, careful shielding is required to reduce "hum" pickup in input leads. If large feedback resistors are used, they should also be shielded along with the external input circuitry.

Leakage currents across printed circuit boards can easily exceed the bias current of the OPA404. To avoid leakage, utmost care must be used in planning the board layout. A "guard" pattern should completely surround the high impedance input leads and should be connected to a low-impedance point which is at the signal input potential. (See Figure 3).

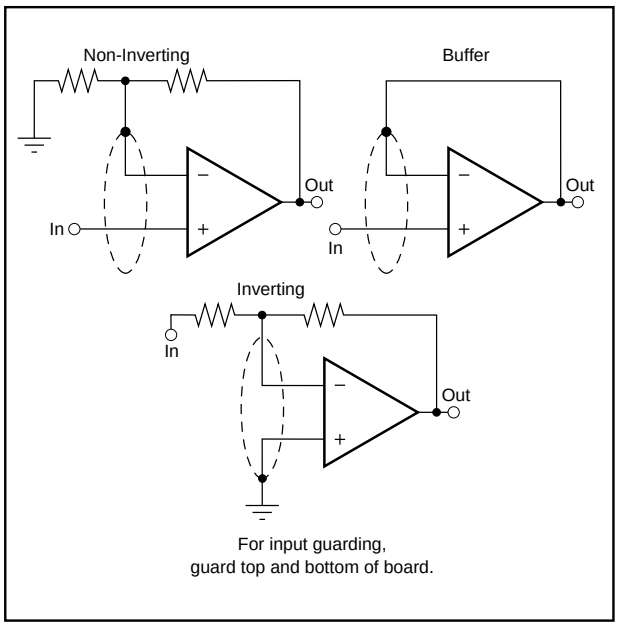

FIGURE 3. Connection of Input Guard.

HANDLING AND TESTING

Measuring the unusually low bias current of the OPA404 is difficult without specialized test equipment; most commercial benchtop testers cannot accurately measure the OPA404 bias current. Low-leakage test sockets and special test fixtures are recommended if incoming inspection of bias current is to be performed.

To prevent surface leakage between pins, the DIP package should not be handled by bare fingers. Oils and salts from fingerprints or careless handling can create leakage currents that exceed the specified OPA404 bias currents.

If necessary, DIP packages and PC board assemblies can be cleaned with Freon TF®, baked for 30 minutes at 85°C, rinsed with de-ionized water, and baked again for 30 minutes at 85°C. Surface contamination can be prevented by the application of a high-quality conformal coating to the cleaned PC board assembly.

BIAS CURRENT CHANGE vs COMMON-MODE VOLTAGE

The input bias currents of most popular BIFET operational amplifiers are affected by common-mode voltage (Figure 4). Higher input FET gate-to-drain voltage causes leakage and ionization (bias) currents to increase. Due to its cascode input stage, the extremely low bias current of the OPA404 is not compromised by common-mode voltage.

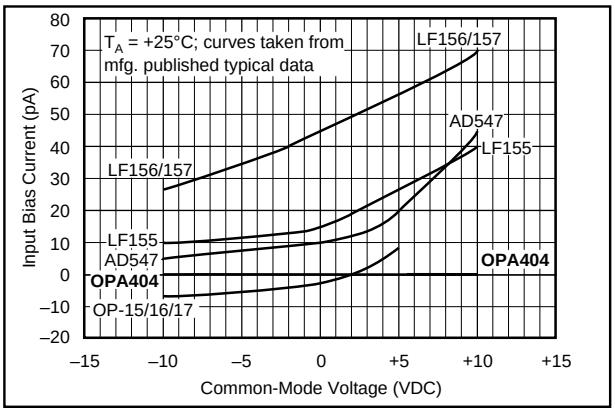

FIGURE 4. Input Bias Current vs Common-Mode Voltage.

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
