## description

This octal buffer and line driver is designed specifically to improve both the performance and density of 3-state memory address drivers, clock drivers, and bus-oriented receivers and transmitters. The device provides complementary output-enable (OE and OE) inputs and noninverting outputs.

The SN64BCT757 is characterized for operation from -40°C to 85°C and 0°C to 70°C.

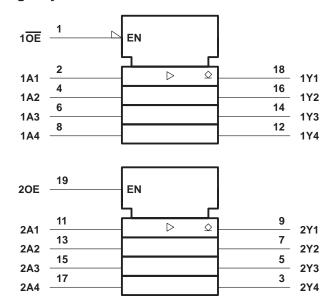

**FUNCTION TABLES** 

INPU	JTS	OUTPUT

SCBS479 - MARCH 1993 - REVISED MAY 1994

## logic symbol†

<sup>†</sup> This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

## logic diagram (positive logic)

## absolute maximum ratings over operating free-air temperature range (unless otherwise noted)‡

Supply voltage range, V <sub>CC</sub>	$\dots$ -0.5 V to 7 V
Input voltage range, V <sub>I</sub> (see Note 1)	$\dots$ -0.5 V to 7 V
Voltage range applied to any output in the disabled or power-off state, VO	$\ldots$ –0.5 V to 5.5 V
Voltage range applied to any output in the high state, VO	$\dots$ -0.5 V to V <sub>CC</sub>
Input clamp current, I <sub>IK</sub> (V <sub>I</sub> < 0)	–30 mA
Current into any output in the low state, IO	128 mA
Operating free-air temperature range	40°C to 85°C
Storage temperature range	-65°C to 150°C

<sup>‡</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The input negative-voltage ratings may be exceeded if the input clamp-current ratings are observed.

SCBS479 - MARCH 1993 - REVISED MAY 1994

## recommended operating conditions (see Note 2)

		MIN	NOM	MAX	UNIT
VCC	Supply voltage	4.5	5	5.5	V
VIH	High-level input voltage	2			V
V <sub>IL</sub>	Low-level input voltage			0.8	V
Vон	High-level output voltage			5.5	V
I <sub>IK</sub>	Input clamp current			-18	mA
l <sub>OL</sub>	Low-level output current			64	mA
Δt/ΔV <sub>CC</sub>	Power-up ramp rate	2			μs/V
TA	Operating free-air temperature	-40		85	°C

NOTE 2: Unused or floating inputs must be held high or low.

## electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER	TES	ST CONDITIONS		MIN	TYP <sup>†</sup>	MAX	UNIT
VIK	V <sub>CC</sub> = 4.5 V,	$I_{I} = -18 \text{ mA}$				-1.2	V
IOH	V <sub>CC</sub> = 4.5 V,	V <sub>OH</sub> = 5.5 V				0.1	mA
V <sub>OL</sub>	V <sub>CC</sub> = 4.5 V,	$I_{OL} = 64 \text{ mA}$			0.42	0.55	V
loz	$V_{CC} = 0$ to 2.3 V (power up),	$V_0 = 2.7 V$ ,	OE = 0.8 V or OE = 2 V			50	μΑ
loz	$V_{CC} = 1.8 \text{ V to 0 (power down)},$	$V_0 = 2.7 V$	OE = 0.8 V or OE = 2 V			50	μΑ
l <sub>l</sub>	V <sub>CC</sub> = 5.5 V,	$V_I = 7 V$				0.1	mA
lін	V <sub>CC</sub> = 5.5 V,	V <sub>I</sub> = 2.7 V				20	μΑ
Ι <sub>ΙL</sub>	V <sub>CC</sub> = 5.5 V,	V <sub>I</sub> = 0.5 V				-1	mA
			Outputs high			34	
Icc	$V_{CC} = 5.5 V,$	Outputs open	Outputs low			77	mA
			OE and OE inactive			10	
C <sub>i</sub>	V <sub>CC</sub> = 5 V,	V <sub>I</sub> = 2.5 V or 0.5	V		6	·	pF
Co	V <sub>CC</sub> = 5 V,	V <sub>O</sub> = 2.5 V or 0.5	5 V		4	·	pF

<sup>&</sup>lt;sup>†</sup> All typical values are at  $V_{CC} = 5 \text{ V}$ ,  $T_A = 25^{\circ}\text{C}$ .

# switching characteristics over recommended range of supply voltage, $C_L$ = 50 pF (unless otherwise noted) (see Note 3)

<sup>(1)</sup> Status: For more details on status, see our product life cycle.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

<sup>(2)</sup> Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

<sup>(4)</sup> Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

SOIC

#### NOTES:

- 1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not
- exceed 0.15 mm per side.
- 4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.43 mm per side.
- 5. Reference JEDEC registration MS-013.

SOIC

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SOIC

NOTES: (continued)

- 8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 9. Board assembly site may have different recommendations for stencil design.
