

## HIGH-SPEED DIFFERENTIAL RECEIVER

### FEATURES

- **Controlled Baseline – One Assembly/Test Site, One Fabrication Site**
- **Extended Temperature Performance of Up to –55°C to 125°C**
- **Enhanced Diminishing Manufacturing Sources (DMS) Support**
- **Enhanced Product-Change Notification**
- **Qualification Pedigree <sup>(1)</sup>**
- **400-Mbps Signaling Rate <sup>(2)</sup> and 200-Mxfr/s Data Transfer Rate**
- **Operates With a Single 3.3-V Supply**
- **–4 V to 5 V Common-Mode Input Voltage Range**
- **Differential Input Thresholds < ±50 mV With 50 mV of Hysteresis Over Entire Common-Mode Input Voltage Range**
- **Integrated 110-Ω Line Termination Resistors On LVDT Products**
- **Complies With TIA/EIA-644 (LVDS)**
- **Active Failsafe Assures a High-Level Output With No Input**
- **Bus-Pin ESD Protection Exceeds 15-kV HBM**
- **Input Remains High-Impedance On Power Down**

- (1) Component qualification in accordance with JEDEC and industry standards to ensure reliable operation over an extended temperature range. This includes, but is not limited to, Highly Accelerated Stress Test (HAST) or biased 85/85, temperature cycle, autoclave or unbiased HAST, electromigration, bond intermetallic life, and mold compound life. Such qualification testing should not be viewed as justifying use of this component beyond specified performance and environmental limits.
- (2) The signaling rate of a line is the number of voltage transitions that are made per second expressed in the units bps (bits per second).

- **TTL Inputs Are 5-V Tolerant**
- **Pin-Compatible With the AM26LS32, SN65LVDS32B, μA9637, SN65LVDS9637B**

### DESCRIPTION

This family of four LVDS data line receivers offers the widest common-mode input voltage range in the industry. These receivers provide an input voltage range specification compatible with a 5-V PECL signal as well as an overall increased ground-noise tolerance. They are in industry standard footprints with integrated termination as an option.

Precise control of the differential input voltage thresholds allows for inclusion of 50 mV of input voltage hysteresis to improve noise rejection on slowly changing input signals. The input thresholds are still no more than +50 mV over the full input common-mode voltage range.

**SN65LVDS33D**

### ORDERING INFORMATION<sup>(1)</sup>

T <sub>A</sub>	PACKAGE <sup>(2)</sup>		ORDERABLE PART NUMBER	TOP-SIDE MARKING
	–55°C to 125°C	SOIC - D	Reel of 2500	SN65LVDS33MDREP
SOIC - D		Reel of 2500	SN65LVDT33MDREP <sup>(3)</sup>	LVDT33M

- (1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at [www.ti.com](http://www.ti.com).
- (2) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at [www.ti.com/sc/package](http://www.ti.com/sc/package).
- (3) Product Preview

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

**DESCRIPTION (CONTINUED)**

The high-speed switching of LVDS signals usually necessitates the use of a line impedance matching resistor at the receiving-end of the cable or transmission media. The SN65LVDT series of receivers eliminates this external resistor by integrating it with the receiver. The nonterminated SN65LVDS series is also available for multidrop or other termination circuits.

The receivers can withstand ±15-kV human-body model (HBM) and ±600-V machine model (MM) electrostatic discharges to the receiver input pins with respect to ground without damage. This provides reliability in cabled and other connections where potentially damaging noise is always a threat.

The receivers also include a (patent pending) failsafe circuit that provides a high-level output within 600 ns after loss of the input signal. The most common causes of signal loss are disconnected cables, shorted lines, or powered-down transmitters. The failsafe circuit prevents noise from being received as valid data under these fault conditions. This feature may also be used for Wired-Or bus signaling. See *The Active Failsafe Feature of the SN65LVDS32B* application note.

The intended application and signaling technique of these devices is point-to-point baseband data transmission over controlled impedance media of approximately 100 Ω. The transmission media may be printed-circuit board traces, backplanes, or cables. The ultimate rate and distance of data transfer is dependent upon the attenuation characteristics of the media and the noise coupling to the environment.

The SN65LVDS33-EP is characterized for operation from –55°C to 125°C.

**FUNCTION TABLE<sup>(1)</sup>**

SN65LVDS33 and SN65LVDT33

			V <sub>I</sub> = 2.4 V, Other input open		±50	
			V <sub>I</sub> = -4 V, Other input open		±180	
			V <sub>I</sub> = 5 V, Other input open		±95	
I <sub>IO</sub>	Differential input current (I <sub>IA</sub> - I <sub>IB</sub> )	SN65LVDS	V <sub>ID</sub> = 100 mV, V <sub>IC</sub> = -4 V or 5 V		±5	μA
		SN65LVDT	V <sub>ID</sub> = 200 mV, V <sub>IC</sub> = -4 V or 5 V	1.55	2.4	mA
I <sub>I(OFF)</sub>	Power-off input current (A or B inputs)	SN65LVDS	V <sub>A</sub> or V <sub>B</sub> = 0 V or 2.4 V, V <sub>CC</sub> = 0 V		±25	μA
			V <sub>A</sub> or V <sub>B</sub> = -4 V or 5 V, V <sub>CC</sub> = 0 V		±60	
		SN65LVDT	V <sub>A</sub> or V <sub>B</sub> = 0 V or 2.4 V, V <sub>CC</sub> = 0 V		±35	
			V <sub>A</sub> or V <sub>B</sub> = -4 V or 5 V, V <sub>CC</sub> = 0 V		±120	
I <sub>IH</sub>	High-level input current (enables)	V <sub>IH</sub> = 2 V			12	μA
I <sub>IL</sub>	Low-level input current (enables)	V <sub>IL</sub> = 0.8 V			12	μA
I <sub>OZ</sub>	High-impedance output current		-10		12	μA
C <sub>I</sub>	Input capacitance, A or B input to GND	V <sub>I</sub> = 0.4 sin(4E6πt) + 0.5 V		5		pF

(1) All typical values are at 25°C and with a 3.3-V supply.

## SWITCHING CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT	
$t_{PLH(1)}$ Propagation delay time, low-to-high level output	See <a href="#">Figure 3</a>	1.8	4	8	ns	
$t_{PHL(1)}$ Propagation delay time, high-to-low level output		1.8	4	8	ns	
$t_{d1}$ Delay time, failsafe deactivate time	$C_L = 10 \text{ pF}$ , See <a href="#">Figure 3</a> and <a href="#">Figure 6</a>			11	ns	
$t_{d2}$ Delay time, failsafe activate time		0.2		2	$\mu\text{s}$	
$t_{sk(p)}$ Pulse skew ( $ t_{PHL(1)} - t_{PLH(1)} $ )	See <a href="#">Figure 3</a>		200		ps	
$t_{sk(o)}$ Output skew <sup>(2)</sup>			150		ps	
$t_{sk(pp)}$ Part-to-part skew <sup>(3)</sup>				1.2	ns	
$t_r$ Output signal rise time				0.8	ns	
$t_f$ Output signal fall time				0.8	ns	
$t_{PHZ}$ Propagation delay time, high level-to-high impedance output		See <a href="#">Figure 4</a>		5.5	12	ns
$t_{PLZ}$ Propagation delay time, low level-to-high impedance output				4.4	12	ns
$t_{PZH}$ Propagation delay time, high impedance-to-high level output			3.8	12	ns	
$t_{PZL}$ Propagation delay time, high impedance-to-low level output			7	12	ns	

(1) All typical values are at 25°C and with a 3.3-V supply.

(2)  $t_{sk(o)}$  is the magnitude of the time difference between the  $t_{PLH}$  or  $t_{PHL}$  of all receivers of a single device with all of their inputs driven together.

(3)  $t_{sk(pp)}$  is the magnitude of the time difference in propagation delay times between any specified terminals of two devices when both devices operate with the same supply voltages, at the same temperature, and have identical packages and test circuits.

APPLICATION INFORMATION

- A. Place a 0.1-μF Z5U ceramic, mica or polystyrene dielectric, 0805 size, chip capacitor between V<sub>CC</sub> and the ground plane. The capacitor should be located as close as possible to the device terminals.
- B. The termination resistance value should match the nominal characteristic impedance of the transmission media with ±10%.
- C. Unused enable inputs should be tied to V<sub>CC</sub> or GND as appropriate.

**APPLICATION INFORMATION (continued)**

**ACTIVE FAILSAFE FEATURE**

A differential line receiver commonly has a failsafe circuit to prevent it from switching on input noise. Current LVDS failsafe solutions require either external components with subsequent reductions in signal quality or integrated solutions with limited application. This family of receivers has a new integrated failsafe that solves the limitations seen in present solutions. A detailed theory of operation is presented in application note, *The Active Failsafe Feature of the SN65LVDS32B* (SLLA082A).

Figure 13 shows one receiver channel with active failsafe. It consists of a main receiver that can respond to a high-speed input differential signal. Also connected to the input pair are two failsafe receivers that form a window comparator. The window comparator has a much slower response than the main receiver and it detects when the input differential falls below 80 mV. A 600-ns failsafe timer filters the window comparator outputs. When failsafe is asserted, the failsafe logic drives the main receiver output to logic high.

**Figure 13. Receiver With Active Failsafe**

APPLICATION INFORMATION (continued)

ECL/PECL-to-LVTTL CONVERSION WITH TI'S LVDS RECEIVER

The various versions of emitter-coupled logic (i.e., ECL, PECL and LVPECL) are often the physical layer of choice for system designers. Designers know of the established technology and that it is capable of high-speed data transmission. In the past, system requirements often forced the selection of ECL. Now technologies like LVDS provide designers with another alternative. While the total exchange of ECL for LVDS may not be a design option, designers have been able to take advantage of LVDS by implementing a small resistor divider network at the input of the LVDS receiver. Texas Instruments has taken the next step by introducing a wide common-mode LVDS receiver (no divider network required) which can be connected directly to an ECL driver with only the termination bias voltage required for ECL termination ( $V_{CC} - 2 V$ ).

Figure 14 and Figure 15 show the use of an LV/PECL driver driving five meters of CAT-5 cable and being received by Texas Instruments wide common-mode receiver and the resulting eye-pattern. The values for R3 are required in order to provide a resistor path to ground for the LV/PECL driver. With no resistor divider, R1 simply needs to match the characteristic load impedance of  $50 \Omega$ . The R2 resistor is a small value and is intended to minimize any possible common-mode current reflections.

**PACKAGING INFORMATION**

Orderable part number	Status (1)	Material type (2)	Package   Pins	Package qty   Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
<a href="#">SN65LVDS33MDREP</a>	Active	Production	SOIC (D)   16	2500   LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-55 to 125	LVDS33M
<a href="#">V62/05614-01XE</a>	Active	Production	SOIC (D)   16	2500   LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-55 to 125	LVDS33M

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
