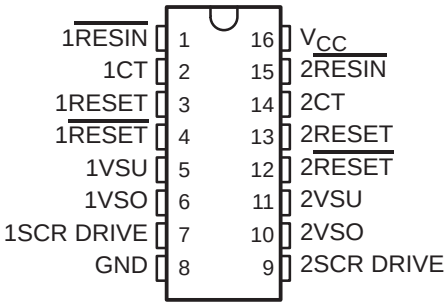
(TOP VIEW)



description

The TL7770 is an integrated-circuit system supervisor designed for use as a reset controller in microcomputer and microprocessor power-supply systems. This device contains two independent supply-voltage supervisors that monitor the supplies for overvoltage and undervoltage conditions at the VSO and VSU terminals, respectively. When V_{CC} attains the minimum voltage of 1 V during power up, the $\overline{\text{RESET}}$ output becomes active (low). As V_{CC} approaches 3.5 V, the time-delay function activates, latching RESET and $\overline{\text{RESET}}$ active (high and low, respectively) for a time delay (t_d) after system voltages have achieved normal levels. Above V_{CC} = 3.5 V, taking $\overline{\text{RESIN}}$ low activates the time-delay function during normal system-voltage levels. To ensure that the microcomputer system has reset, the outputs remain active until the voltage at VSU exceeds the threshold value, V_{IT+}, for a time delay, which is determined by an external timing capacitor such that:

$$t_d \approx 20 \times 10^3 \times \text{capacitance}$$

where t_d is in seconds and capacitance is in farads.

The overvoltage-detection circuit is programmable for a wide range of designs. During an overvoltage condition, an internal silicon-controlled rectifier (SCR) is triggered, providing 250-mA peak instantaneous current and 25-mA continuous current to the SCR gate drive terminal, which can drive an external high-current SCR gate or an overvoltage-warning circuit.

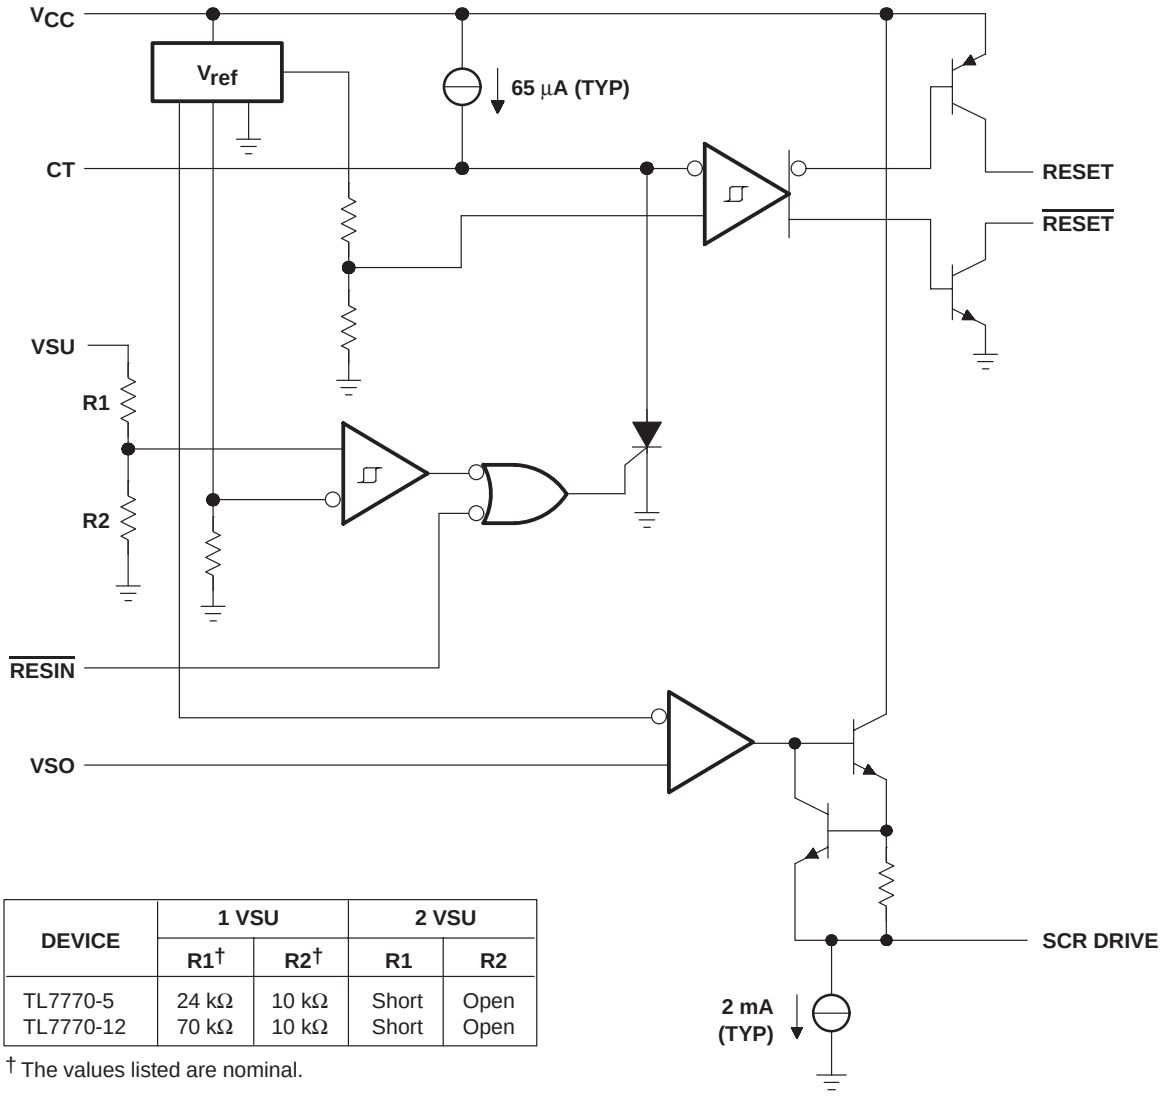
The TL7770C series is characterized for operation from 0°C to 70°C. The TL7770I series is characterized for operation from –40°C to 85°C.

AVAILABLE OPTIONS

T_A	PACKAGED DEVICES		CHIP FORM (Y)
	SMALL OUTLINE (DW)	PLASTIC DIP (N)	
0°C to 70°C	TL7770-5CDW TL7770-12CDW	TL7770-5CN TL7770-12CN	TL7770-5Y TL7770-12Y
–40°C to 85°C	TL7770-5IDW	TL7770-5IN	—

DW package is available taped and reeled. Add the suffix R to the device type (e.g., TL7770-5CDWR). Chip forms are tested at 25°C.

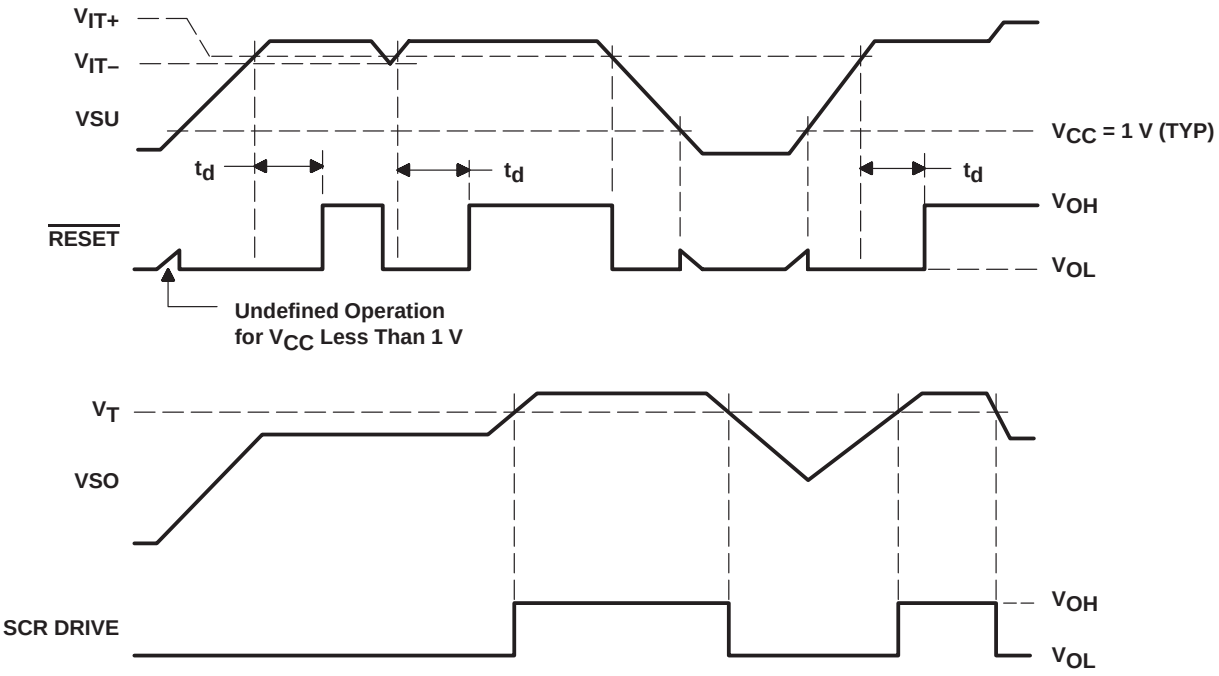
functional block diagram (each channel)



DEVICE	1 VSU		2 VSU	
	R1†	R2†	R1	R2
TL7770-5	24 kΩ	10 kΩ	Short	Open
TL7770-12	70 kΩ	10 kΩ	Short	Open

† The values listed are nominal.

timing requirements



absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage, V_{CC} (see Note 1) . . . . . 20 V
Input voltage range, V_I: 1VSU, 2VSU, 1VSO, and 2VSO (see Note 1) . . . . . –0.3 V to 18 V
Low-level output current (1$\overline{\text{RESET}}$ and 2$\overline{\text{RESET}}$), I_{OL} . . . . . 20 mA
High-level output current (1RESET and 2RESET), I_{OH} . . . . . –20 mA
Package thermal impedance, θ_{JA} (see Notes 2 and 3): DW package . . . . . 57°C/W
N package . . . . . 88°C/W
Lead temperature 1,6 mm (1/16 in) from case for 10 seconds: DW or N package . . . . . 260°C
Storage temperature range, T_{stg} . . . . . –65°C to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltage values are with respect to the network ground terminal.
2. Maximum power dissipation is a function of $T_J(max)$, θ_{JA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(max) – T_A)/\theta_{JA}$. Operating at the absolute maximum T_J of 150°C can impact reliability.
3. The package thermal impedance is calculated in accordance with JESD 51, except for through-hole packages, which use a trace length of zero.

recommended operating conditions

		MIN	MAX	UNIT
Supply voltage, V_{CC}		3.5	18	V
Input voltage range, V_I (see Note 4)	1VSU, 2VSU, 2VSO, 1VSO	0	18	V
Output voltage, V_O (1CT, 2CT)			5	V
High-level input voltage range, V_{IH} (1$\overline{\text{RESIN}}$, 2$\overline{\text{RESIN}}$)		2	18	V
Low-level input voltage range, V_{IL} (1$\overline{\text{RESIN}}$, 2$\overline{\text{RESIN}}$)		0	0.8	V
Output sink current, I_O (1CT, 2CT)			50	μA
High-level output current, I_{OH} (1RESET, 2RESET)			–16	mA
Low-level output current, I_{OL} (1$\overline{\text{RESET}}$, 2$\overline{\text{RESET}}$)			16	mA
Continuous output current, I_O (1SCR DRIVE, 2SCR DRIVE)			25	mA
Timing capacitor, C_T			10	μF
Operating free-air temperature, T_A	TL7770C series	0	70	°C
	TL7770I series	–40	85	°C

NOTE 4: The algebraic convention, in which the least positive (most negative) value is designated minimum, is used in this data sheet for logic voltage levels only.

WAVEFORMS

Figure 2. Input Pulse Definition

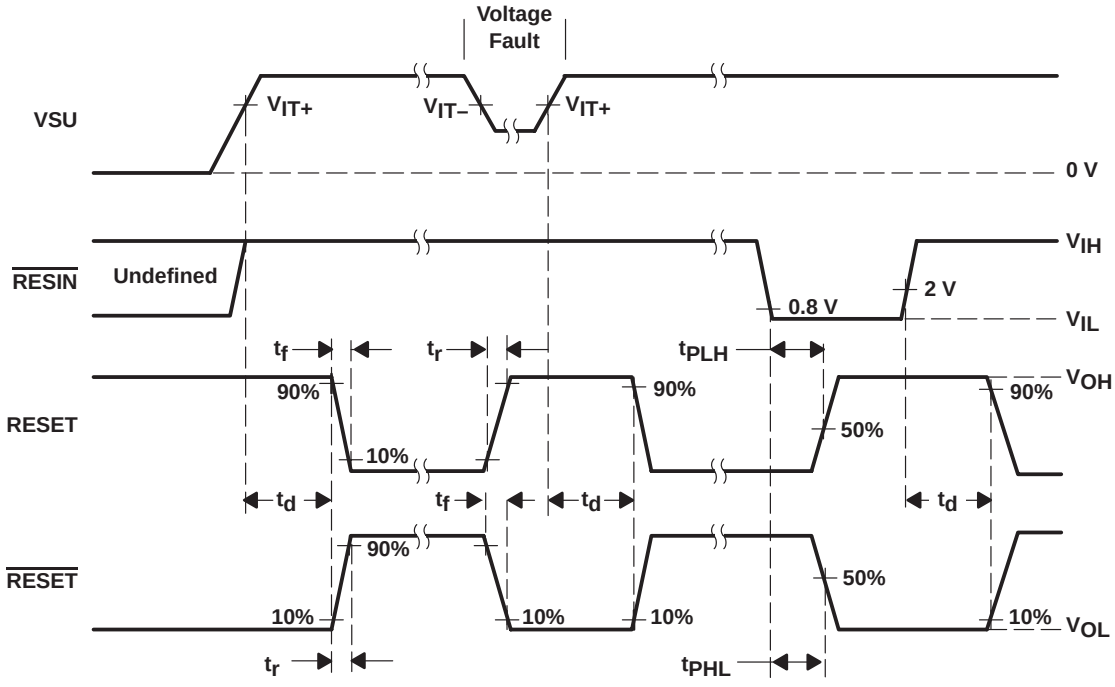

Figure 3. Voltage Waveforms

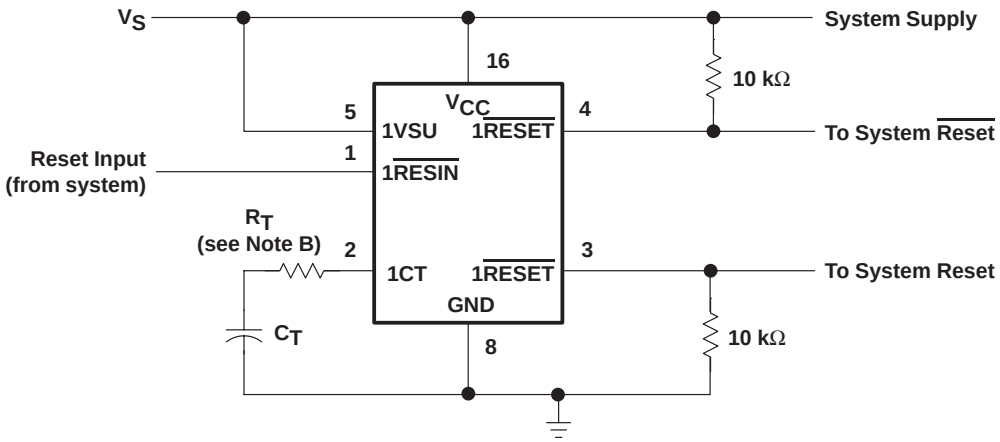
APPLICATION INFORMATION



NOTE B: When V_{CC} and 1VSU are connected to the same point, it is recommended that series resistance (R_T) be added between the time-delay programming capacitor (C_T) and the voltage-supervisor device terminal (1CT). The suggested R_T value is given by:

$$R_T > \frac{V_I - V_{IT-}}{1 \times 10^{-3}}, \text{ where } V_I = \left(\text{the lesser of 7.1 V or } V_S\right)$$

When this series resistor is used, the t_d calculation is as follows:

$$t_d = \frac{1.3 - \left[\left((6.5E - 5) \times 10^{-5}\right) \times R_T\right]}{6.5 \times 10^{-5}} \times C_T$$

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
