

TUSB217-Q1 USB 高速信号调节器

1 特性

- 符合面向汽车应用的 AEC-Q100 标准
 - 器件温度等级 2: -40°C 至 $105^{\circ}\text{C T}_\text{A}$
- 宽电源电压范围: 2.3 - 6.5V
- 超低 USB 断开和关断功耗
- 可提供 USB 2.0 高速信号调节
- 与 USB 2.0、OTG 2.0 和 BC 1.2 兼容
- 支持低速、全速和高速信号传输
- 主机/设备无关
- 支持长达 5m 的电缆
 - 通过外部下拉电阻器实现四种可选的信号增强（边沿升压与直流升压）设置
 - 通过上拉或下拉可配置引脚实现三种可选的 RX 灵敏度，以补偿高损耗应用中的 ISI 抖动
- 可扩展解决方案 - 用于高损耗应用的 菊花链器件
- 与 TUSB213 (5V) 引脚兼容

2 应用

- 汽车信息娱乐系统
- 汽车音响主机
- 汽车媒体中心
- 笔记本电脑/台式计算机/扩展坞
- 平板电脑/手机
- 电视
- 有源电缆、电缆扩展器
- 背板

3 说明

TUSB217-Q1 是第三代 USB 2.0 高速信号调节器，旨在补偿传输通道中的交流损失（由于电容性负载）和直流损失（由于电阻性负载）。

TUSB217-Q1 采用了专利设计，可通过边缘加速器来对 USB 2.0 高速信号的传输边缘进行加速，并通过直流升压功能来提高静态电平。此外，TUSB217-Q1 还具有预均衡功能，可提高接收器的灵敏度并补偿较长线缆应用中的 ISI 抖动。USB 低速和全速信号特征不受 TUSB217-Q1 的影响。

TUSB217-Q1 可在不改变数据包计时或增加传播延迟的情况下提高信号质量，是需要低延迟的应用的理想选择。

TUSB217-Q1 可使用长达 5 米的线缆帮助系统通过 USB 2.0 高速电气近端眼图合规性测试。

TUSB217-Q1 与 USB On-The-Go (OTG) 和电池充电 (BC 1.2) 协议兼容。

5 Pin Configuration and Functions

Pin Functions

PIN		I/O	INTERNAL PULLUP/PULLDOWN	DESCRIPTION
NAME	NO. (RGY)			
BOOST	1	I	N/A	USB High Speed boost select via external pull down resistor. Both edge boost and DC boost are controlled by a single pin in non-I2C mode. In I2C mode edge boost and DC boost can be individually controlled. Sampled upon power up. Does not recognize real time adjustments. Auto selects BOOST LEVEL = 3 when left floating.
NC	2,3	I		Leave unconnected
RESERVED	8	O		Leave unconnected or connect a decoupling cap 0.1μF
RX_SEN ⁽¹⁾ /ENA_HS	4	I/O	N/A	In I2C mode: Reserved for TI test purpose. In non-I2C mode: At reset: 3-level input signal RX_SEN. USB High Speed RX Sensitivity Setting to Compensate ISI Jitter H (pin is pulled high) – high RX sensitivity (high loss channel) M (pin is left floating) – medium RX sensitivity (medium loss channel) L (pin is pulled low) – low RX sensitivity (low loss channel) After reset: Output signal ENA_HS. Flag indicating that channel is in High Speed mode. Asserted upon: 1. Detection of USB-IF High Speed test fixture from an unconnected state followed by transmission of USB TEST_PACKET pattern. 2. Squelch detection following USB reset with a successful HS handshake [HS handshake is declared to be successful after single chirp J chirp K pair where each chirp is within 18 μs – 128 μs].
D2P	5	I/O	N/A	USB High Speed positive port.
D2M	6	I/O	N/A	USB High Speed negative port.
GND	7	P	N/A	Ground
D1M	9	I/O	N/A	USB High Speed negative port..
D1P	10	I/O	N/A	USB High Speed positive port.

(1) Pull-down and pull-up resistors for RX_SEN pin must follow R_{RXSEN1} and R_{RXSEN2} resistor recommendations in non I²C mode.

Pin Functions (continued)

PIN		I/O	INTERNAL PULLUP/PULLDOWN	DESCRIPTION
NAME	NO. (RGY)			
SDA ⁽²⁾	11	I/O	500 kΩ PU 1.8 MΩ PD	I2C Mode: Bidirectional I2C data pin [7-bit I2C slave address = 0x2C]. In non I2C mode: Reserved for TI test purpose.
VCC	12	P	N/A	Supply power
RSTN	14	I	500 kΩ PU 1.8 MΩ PD	Device disable/enable. Low – Device is at reset and in shutdown, and High - Normal operation. Recommend 0.1-μF external capacitor to GND to ensure clean power on reset if not driven. If the pin is driven, it must be held low until the supply voltage for the device reaches within specifications.
SCL ⁽²⁾ /CD	13	I/O	When RSTN asserted there is a 500 kΩ PD	In I2C mode: I2C clock pin [I2C address = 0x2C]. Non I2C mode: After reset: Output CD. Flag indicating that a USB device is attached (connection detected). Asserted from an unconnected state upon detection of DP or DM pull-up resistor. De-asserted upon detection of disconnect.
Thermal Pad	TPAD	N/A	N/A	Thermal Pad is electrically not connected to device ground. Connection to board ground is optional.

- (2) Pull-up resistors for SDA and SCL pins in I²C mode should be R_{Pull-up} (depending on I2C bus voltage). If both SDA and SCL are pulled up at power-up the device enters into I²C mode.

7 Detailed Description

7.1 Overview

The TUSB217-Q1 is a USB High-Speed (HS) signal conditioner designed to compensate for ISI signal loss in a transmission channel. TUSB217-Q1 has a patented design for USB Low Speed (LS) and Full Speed (FS) signals. It does not alter the signal characteristics. HS signals are compensated. The design is compatible with USB On-The-Go (OTG) and Battery Charging (BC) specifications.

Programmable signal gain through an external resistor permits fine tuning device performance to optimize signals. This helps pass USB HS electrical compliance tests at the connector. Additional RX sensitivity, tuned by external pull-up resistor and pull-down resistor, allows to overcome attenuation in cables. The TUSB217-Q1 allows application in series to cover longer distances, or high loss transmission paths. A maximum of 4 devices can be daisy-chained.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 High speed boost

The high speed booster (combination of edge boost and DC boost) improves the eye width for USB2.0 high speed signals. It is direction independent and by that is compatible to OTG systems. The **BOOST** pin is configuring the booster strength with different values of pull down resistors to set 4 levels of boosts, alternatively the boost level can be set via I²C register according to [I²C mode](#). Internal circuitry of the signal conditioner reduces possible overshoot.

7.3.2 RX Sensitivity

The **RX_SEN** pin is a tri-level pin. It is used to set the gain of the device according to system channel loss. RX sensitivity can be increased to recover incoming signals with low vertical eye opening to be able to boost weak signals and helps overcoming high attenuation.

7.4 Device Functional Modes

7.4.1 Low Speed (LS) mode

TUSB217-Q1 automatically detects a LS connection and does not enable signal compensation. **CD** pin is asserted high but **ENA_HS** will be low.

7.4.2 Full Speed (FS) mode

TUSB217-Q1 automatically detects a FS connection and does not enable signal compensation. **CD** pin is asserted high but **ENA_HS** will be low

Device Functional Modes (接下页)

7.4.3 High Speed (HS) mode

TUSB217-Q1 automatically detects a HS connection and will enable signal compensation as determined by the configuration of the RX_SEN pin and the external pull down resistance on its BOOST pin.

CD pin and ENA_HS pin are asserted high when high speed boost is active.

7.4.4 High Speed downstream port electrical compliance test mode

TUSB217-Q1 will detect HS compliance test fixture and enter downstream port high speed eye diagram test mode. CD pin will be low and ENA_HS pin is asserted high when TUSB217-Q1 is in HS eye compliance test mode.

If RSTN pin is asserted low and de-asserted high while TUSB217-Q1 is operating in HS functional mode, TUSB217-Q1 will transition to HS eye compliance test mode and CD asserts low and ENA_HS remains high. When this occurs signal compensation is enabled.

7.4.5 Shutdown mode

TUSB217-Q1 can be disabled when its RSTN pin is asserted low. DP, DM traces are continuous through the device in shutdown mode. The USB channel is still fully operational, but there is neither signal compensation, nor any indication from the CD pin as to the status of the channel.

表 1. CD and ENA_HS Pins in Different Modes

MODE	CD	ENA_HS
Low speed	HIGH	LOW
Full speed	HIGH	LOW
High speed	HIGH	HIGH
High speed downstream port electrical test	LOW	HIGH
Shutdown	LOW	LOW

7.4.6 I²C mode

TUSB217-Q1 supports 100 KHz I2C for device configuration, status read back and test purposes. For detail electrical and functional specifications refer to I2C Bus Specification 2.1, 2001 – STANDARD MODE. This controller is enabled after SCL and SDA pins are sampled high shortly after return from shutdown. In this mode, the CSR can be accessed by I2C read/write transaction to 7-bit slave address 0x2C. It is advised to set CFG_ACTIVE bit before changing values. This halts the FSM, and reset it after all changes are made. This ensure proper startup into high speed mode.

7.5 TUSB217 Registers

[Table 2](#) lists the memory-mapped registers for the TUSB217 registers. All register offset addresses not listed in [Table 2](#) should be considered as reserved locations and the register contents should not be modified.

8 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The purpose of the TUSB217-Q1 is to re-store the signal integrity of a USB High Speed channel up to the USB connector. The loss in signal quality stems from reduced channel bandwidth due to high loss PCB trace and other components that contribute a capacitive load. This can cause the channel to fail the USB near end eye mask. Proper use of the TUSB217-Q1 can help to pass this eye mask.

A secondary purpose is to use the CD pin of the TUSB217-Q1 to control other blocks on the customer platform, if so desired.

8.2 Typical Application

A typical application is shown in 图 7. In this setup, D2P and D2M face the USB connector while D1P and D1M face the USB host. The orientation may be reversed [that is, D2 faces transceiver and D1 faces connector].

Typical Application (接下页)

8.2.1 Design Requirements

TUSB217-Q1 requires a valid reset signal as described in the *power supply recommendations* section. The capacitor at RSTN pin is not required if a micro controller drives the RSTN pin according to recommendations.

For this design example, use the parameters shown in 表 8, 表 9 and 表 10

8.2.2 Detailed Design Procedure

The ideal BOOST setting is dependent upon the signal chain loss characteristics of the target platform. The recommendation is to start with BOOST level 0, and then increment to BOOST level 1, and so on. if permissible. Same applies to the RX sensitivity setting where it is recommended to plan for the required pads or connections to change boost settings, but to start with RX sensitivity level 1.

In order for the TUSB217-Q1 to recognize any change to the BOOST setting, the RSTN pin must be toggled. This is because the BOOST pin is latched on power up and the pin is ignored thereafter.

注

The TUSB217-Q1 compensates for extra attenuation in the signal path according to the configuration of the RX_SEN pin. This pin is not 5 V tolerant and therefore when selecting the highest RX sensitivity level, the voltage level at RX_SEN pin must be less than 3.6V.

Placement of the device is also dependent on the application goal. 表 11 summarizes our recommendations.

表 11. Platform Placement Guideline

PLATFORM GOAL	SUGGESTED TUSB217-Q1 PLACEMENT
Pass USB Near End Mask at the receptacle	Close to measurement point (connector)
Pass USB Far End Eye Mask at the plug	Close to USB PHY
Cascade multiple TUSB217s to improve device enumeration	Midway between each USB interconnect

表 12. Table of Recommended Settings

BOOST and RX_SEN settings ⁽¹⁾ for channel loss		
Pre-channel cable length (Between USB PHY and TUSB217-Q1)	BOOST	RX_SEN
0-3 meter	Level 0	Medium or High
2-5 meter	Level 1	Medium or High
Post-channel cable length (Between TUSB217-Q1 and inter-connect)	BOOST	RX_SEN
0-2 meter	Level 0	Medium or High
1-4 meter	Level 1	Medium or High

(1) These parameters are starting values for different cable lengths. Further tuning might be required based on specific host and/or device as well as cable length and loss profile.

8.2.2.1 Test Procedure to Construct USB High Speed Eye Diagram

注

USB-IF certification tests for High Speed eye masks require the *mandated use* of the USB-IF developed test fixtures. These test fixtures do not require the use of oscilloscope probes. Instead they use SMA cables. More information can be found at the USB-IF Compliance Updates Page. It is located under the *Electrical Specifications* section, ID 86 dated March 2013.

The following procedure must be followed before using any oscilloscope compliance software to construct a USB High Speed Eye Mask:

8.2.2.1.1 For a Host Side Application

1. Configure the TUSB217-Q1 to the desired BOOST setting
2. Power on (or toggle the RSTN pin if already powered on) the TUSB217-Q1
3. Using SMA cables, connect the oscilloscope and the USB-IF host-side test fixture to the TUSB217-Q1
4. Enable the host to transmit USB TEST_PACKET
5. Execute the oscilloscope USB compliance software.
6. Repeat the above steps in order to re-test TUSB217-Q1 with a different BOOST setting (must reset to change)

8.2.2.1.2 For a Device Side Application

1. Configure the TUSB217-Q1 to the desired BOOST setting
2. Power on (or toggle the RSTN pin if already powered on) the TUSB217-Q1
3. Connect a USB host, the USB-IF device-side test fixture, and USB device to the TUSB217-Q1. Ensure that the USB-IF device test fixture is configured to the 'INIT' position
4. Allow the host to enumerate the device
5. Enable the device to transmit USB TEST_PACKET
6. Using SMA cables, connect the oscilloscope to the USB-IF device-side test fixture and ensure that the device-side test fixture is configured to the 'TEST' position.
7. Execute the oscilloscope USB compliance software.
8. Repeat the above steps in order to re-test TUSB217-Q1 with a different BOOST setting (must reset to change)

9 Power Supply Recommendations

On power up, the interaction of the RSTN pin and power on ramp could result in digital circuits not being set correctly. The device should not be enabled until the power on ramp has settled to minimum recommended supply voltage or higher to ensure a correct power on reset of the digital circuitry. If RSTN cannot be held low by microcontroller or other circuitry until the power on ramp has settled, then an external capacitor from the RSTN pin to GND is required to hold the device in the low power reset state.

The RC time constant should be larger than five times of the power on ramp time (0 to V_{CC}). With a typical internal pullup resistance of 500 k Ω , the recommended minimum external capacitance is calculated as:

$$[\text{Ramp Time} \times 5] \div [500 \text{ k}\Omega] \quad (1)$$

10 Layout

10.1 Layout Guidelines

Although the land pattern has matched trace width to pad width, optimal impedance control is based on the user's own PCB stack-up. The recommendation is to maintain 90 Ω differential routing underneath the device.

All dimensions are in millimetres (mm).

11.5 静电放电警告

ESD 可能会损坏该集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理措施和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
