

# EVM User's Guide: TPS65214EVM

## TPS65214 Evaluation Module

### Description

The TPS65214EVM is designed to provide a quick setup to evaluate the TPS65214 power management IC (PMIC) and gain familiarity with the PMIC at a register level. The EVM has built-in configurability using headers and jumpers. A USB-C® port allows for easy communication with the device through the onboard MSP432, along with an onboard USB-to-I<sup>2</sup>C adapter.

### Get Started

1. Order the [TPS65214EVM](#)
2. Follow the provided link to access the GUI for online use in a browser or direct download of the desktop version: [TPS65214-GUI](#)
3. Connect the EVM hardware to the host computer using the USB-A to USB-C cable included in the EVM kit or an external USB2ANY interface adapter and apply input power to the board to enable I<sup>2</sup>C communication.

### Features

- GUI support to read and write to device registers along with being able to view and export register data

- USB-A to USB-C connection for I<sup>2</sup>C communication
- USB2ANY interface support for I<sup>2</sup>C communication

### Applications

- [Appliances](#)
- [Building security](#)
- [EV charging infrastructure](#)
- Fire safety systems
- [HMI](#)
- [HVAC](#)
- Industrial PCs
- Low power industrial MPUs, such as AM62L
- [Optical modules](#)
- [Patient monitoring](#) and [diagnostics](#)
- PLC
- Smart meters
- [Test and measurement](#)
- Video surveillance

TPS65214EVM

# 1 Evaluation Module Overview

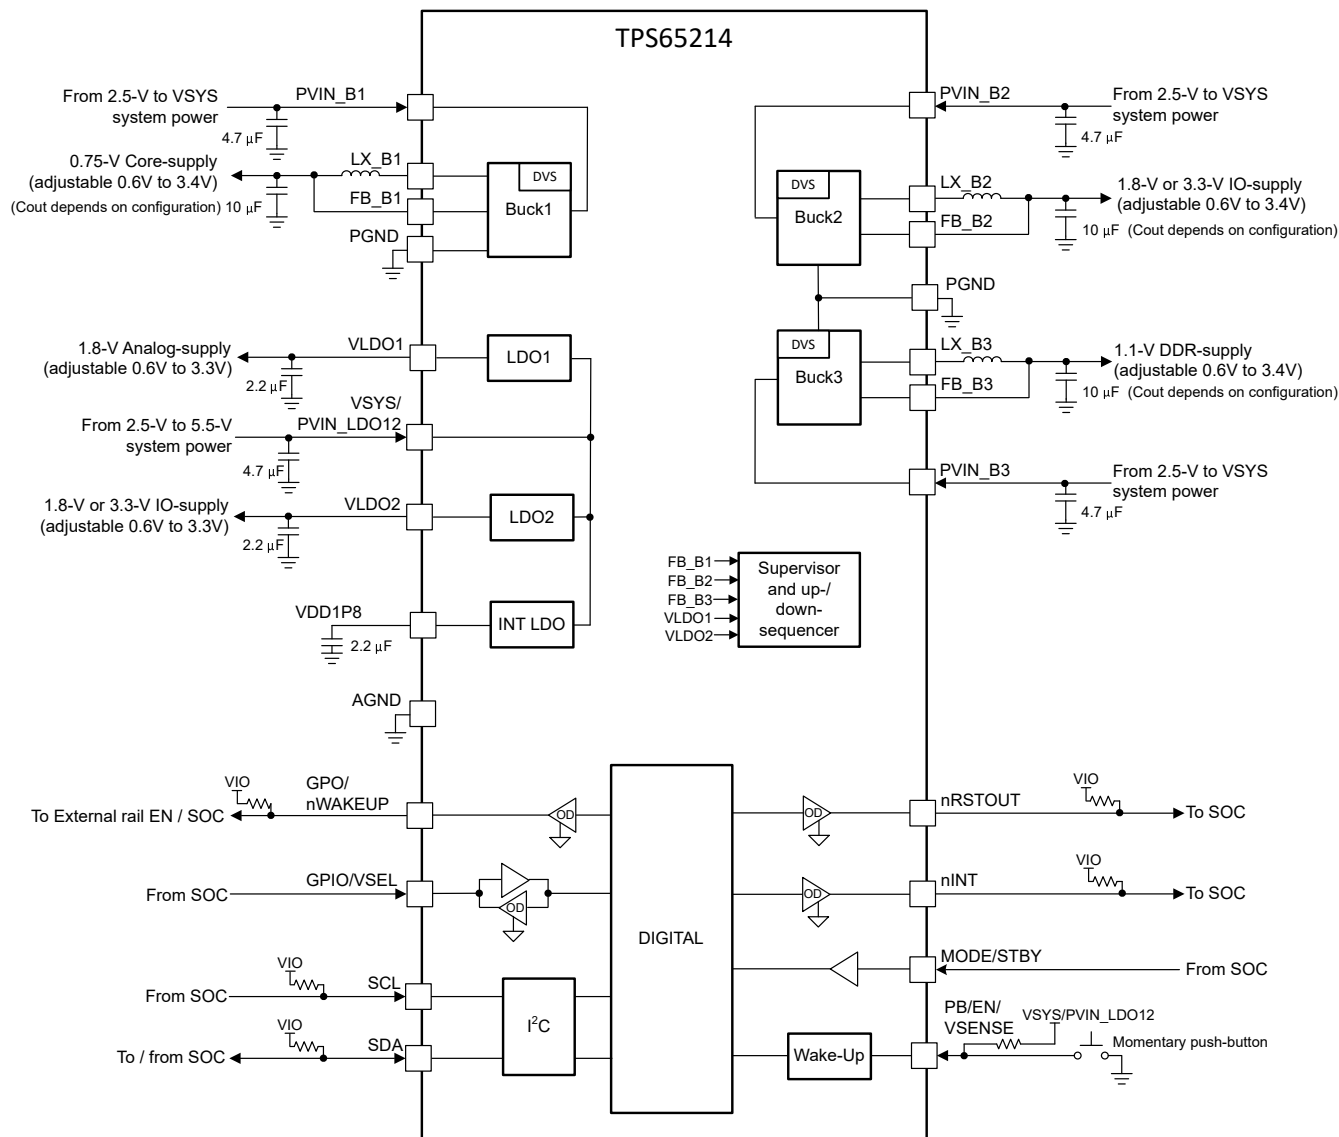

## 1.1 Introduction

This user's guide describes the characteristics, operation, and use of the TPS65214 evaluation module (EVM). The TPS65214EVM is a fully assembly platform for evaluating the performance and functionality of the TPS65214 power management IC (PMIC). The EVM includes an onboard USB-to-I<sup>2</sup>C adapter, power terminals, and jumpers for all DC regulator inputs and outputs, as well as test points for common measurements.

## 1.2 Kit Contents

- TPS65214EVM board
- USB-A to USB-C cable

## 1.3 Specification

Copyright © 2023, Texas Instruments Incorporated

**Figure 1-1. TPS65214 Functional Block Diagram**

## 1.4 Device Information

The TPS65214 is a power management IC (PMIC) designed to supply a wide range of SoCs in both portable and stationary applications. The device is characterized across an ambient temperature range of -40°C to +105°C, making the PMIC an excellent choice for various industrial applications. The device includes three synchronous step-down DC-DC converters and two linear regulators.

## 1.5 Caution

### CAUTION

Read the user's guide before use.

### CAUTION

Hot surface. Contact can cause burns. Do not touch.

## 2 Hardware

### 2.1 Requirements

This section lists the minimum hardware requirements needed to operate the EVM.

**EVM:** TPS65214 evaluation board

**Host Computer:** A computer with an available USB port is required to make use of the EVM software. The EVM software runs on the computer and communicates with the EVM THROUGH the USB-C port or USB2ANY interface.

**Power Supply:** An input voltage source capable of supplying 5V

### 2.2 TPS65214 Resources Overview

The TPS65214 PMIC has multiple analog and digital resources that can be configured to power different processors, FPGAs and SoCs. [Table 2-1](#) and [Table 2-2](#) summarize some of the key electrical specifications for the analog rails and the possible supply configurations and programmable features for each regulator.

**Table 2-1. TPS65214 Power Resources**

	Buck1	Buck 2 and 3	LDO1	LDO2
Input voltage range	2.5V to 5.5V	2.5V to 5.5V	1.4V to 5.5V	1.4V to 5.5V
Output voltage range	0.6V to 3.4V	0.6V to 3.4V	0.6V to 3.3V	0.6V to 3.3V
Operating current	Maximum of 2A	Maximum of 1A	300mA	500mA
Current limiting	5.7A to 6.9A	3.9A to 4.7A	600A to 900mA	400A to 900mA
Status monitoring	UV, NEG_OC, OC, SCG, RV	UV, NEG_OC, OC, SCG, RV	UV, OC, SCG, RV	UV, OC, SCG, RV
Rail configuration	Buck converter	Buck converter	LDO; load switch	LDO; load switch
Short-Circuit Threshold (SCG)	220mV to 300mV	220mV to 300mV	220mV to 300mV	220mV to 300mV

### TPS65214 Multifunction Pins

TPS65214 has three multifunctional pins that can be configured depending on the functional use. [Table 2-2](#) shows the functions available for each of these pins as well as how these functions are configured and operated.

#### Note

Only one of the following pins, MODE/RESET or MODE/STBY, can be configured as MODE. If both are configured as MODE, then MODE/RESET takes priority and MODE/STBY is ignored.

**Table 2-2. TPS65214 Multifunctional Pins**

Pin Name	Pin Configuration	Operation
GPIO/VSEL	<b>GPIO</b> Configurable as an input or an output through the GPIO_CONFIG bit in the GENERAL_CONFIG register.	For detailed operation, see GPIO/VSEL configured as <i>GPIO</i> section in the <a href="#">TPS65214 Integrated Power Management IC for ARM Cortex Processors data sheet</a> .
	<b>VSEL</b> The pin level is used to set the output voltage of Buck1 or Buck3 through the VSEL_RAIL bit in the MFP_1_CONFIG register.	For detailed operation, see GPIO/VSEL configured as 'VSEL' section in the <a href="#">TPS65214 Integrated Power Management IC for ARM Cortex Processors data sheet</a> .
MODE/STBY	<b>MODE</b> Forces buck converters into PWM or permits auto-entry in PFM-mode.	Pin status determines the switching mode of the buck converters.
	<b>STBY</b> Sets device in low power mode.	Disables selected rails. Assert pin low for longer than $t_{DEGLITCH\_MFP}$ . Both MODE and STBY can be combined. Level sensitive.
GPO/nWAKEUP	<b>GPO</b> General purpose output used to sequence external rails	Configurable power-up and power-down sequence or controlled through GPO_EN bit in the GENERAL_CONFIG register.
	<b>nWAKEUP</b> Signal to the host to indicate a power-on event.	Pin held low until device exits the INITIALIZE state. Polarity is not configurable.

## 2.3 EVM Configuration

The following sections outline how to configure the TPS65214EVM for general experimentation.

The TPS65214EVM can be configured as follows:

1. Configure regulator input supply rails for the expected application using the jumpers indicated in the *Supply Voltage Setup*
2. Configure the multi-function pins externally using the mode configuration descriptions indicated in *Multi-Function pin setup*. Please note that the default configuration for regulator choice in SD or DDR voltage selection can differ for each individual NVM configuration (polarity is configurable).
3. Connect VSYS to a power supply capable of supporting the application and enable the supply. Typical supply for TPS6521401 is 5V.
4. If using a version of TPS65214 configured for First Supply Detection (FSD), then the power-up sequence is executed as soon as the 5V supply is connected to VSYS.

### 2.3.1 Default EVM Configuration

This section describes the default configuration programmed on the TPS6521401 PMIC.

The TPS65214EVM comes with the TPS6521401 PMIC installed, which is one of the orderable part numbers of the TPS65214 device family. [Table 2-3](#) shows the default jumper configuration that can be used to evaluate the PMIC performance. For reference, [Figure 2-1](#) demonstrates the output voltages and jumper location on the EVM. This information is based on the programmed default configuration on the TPS6521401EVM. The EVM can be used to evaluate other TPS65214 variants. If the PMIC is reconfigured or replaced with a different orderable, change the external passive components and jumper configuration as needed.

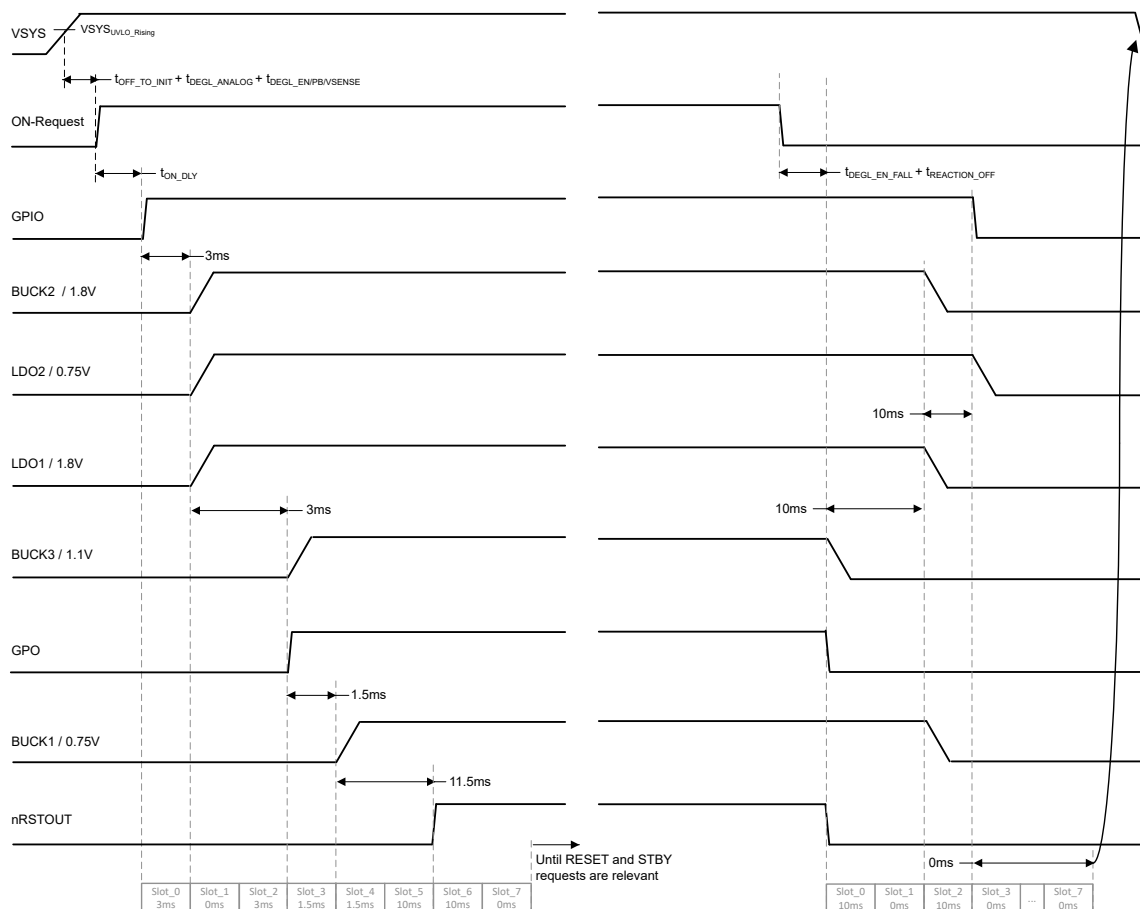

For more information about the settings that can be reconfigured and the I2C registers associated, refer to the [TPS65214 Integrated Power Management IC for ARM Cortex Processors data sheet](#) and [TPS6521401 Technical Reference Manual \(TRM\)](#).

The TPS65214EVM is designed to demonstrate some of the potential uses of the PMIC family. The EVM is more limited than the TPS65214x device.

**Table 2-3. TPS65214EVM Default Jumper Configuration**

	Header		Jumper Default Position
Supply voltage setup	J6, J7	PRE_REG/ EXT_SUPPLY/ USB_V	Set up to supply system voltage with an external supply from VSYS input
	J25	PRE-REG VOUT	Set up for preregulator to output 3.3V
VIO voltage setup	J8	VIO	Set up to supply VIO with external 3.3V LDO
	J30	EXT_LDO_VIN	Set up to supply the external 3.3V LDO with VSYS
Multi-function pin setup	J11	GPIO_VSEL	High = ON (default EVM config) Low = OFF
	J14	MODE_STBY	High = ACTIVE state (default EVM config) Low = STBY state

**Figure 2-1. TPS65214EVM Default Configuration**

**Figure 2-2. TPS6521401 Power Sequence**

### 2.3.2 Configuration Headers

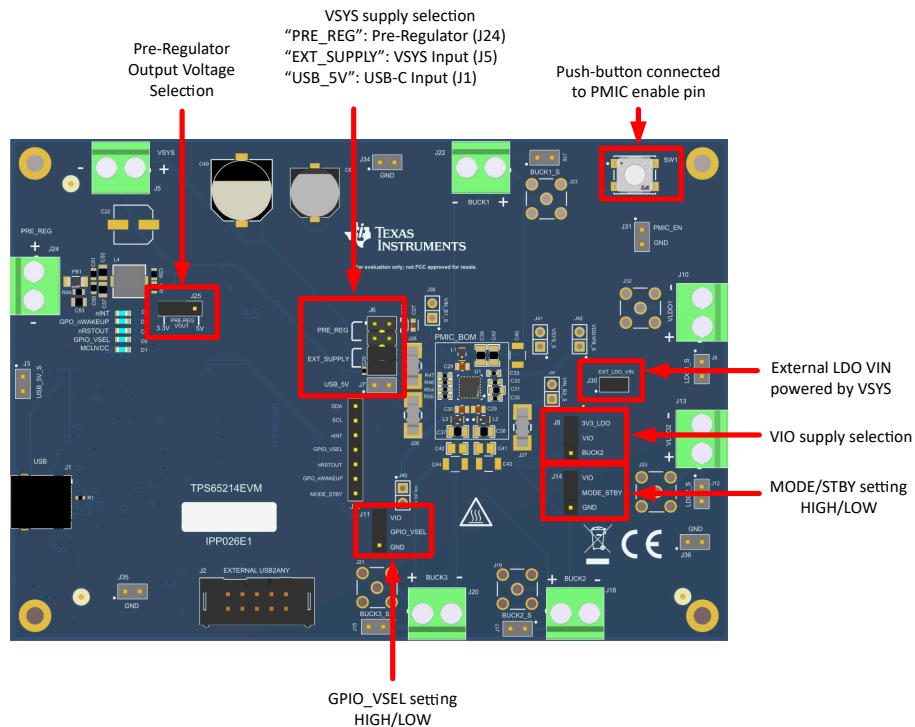

The TPS65214EVM has multiple headers that can be used to change the input supply for some of the power rails. The PCB also includes headers that allows changing specific functions of the PMIC using the multi-function pins. [Table 2-4](#) lists all the headers and the expected configuration for each selection. For reference, the header locations and configuration options are shown in [Figure 2-3](#).

**Table 2-4. TPS65214 Configuration Headers**

	Header Name	Description	Configuration
J6	PRE_REG/EXT_SUPPLY	VSYS Input source selection	<b>J6-1, J6-3</b> VSYS supplied by PRE-REG output (3.3V / 5V)
			<b>J6-5, J6-7</b> VSYS supplied by external supply at VSYS input (J5)
J7	USB_5V	VSYS Input source selection	<b>J7-1</b> VSYS supplied by USB input
J8	VIO	VIO source select	<b>J8-1</b> VIO supplied by external 3.3V LDO
			<b>J8-3</b> VIO supplied by BUCK2 output
J11	GPIO_VSEL	High/Low selection for GPIO/ VSEL pin	<b>J11-1</b> Sets GPIO/VSEL pin HIGH. Effect is dependent on configuration as GPIO or VSEL
			<b>J11-3</b> Sets GPIO/VSEL pin LOW. Effect is dependent on configuration as GPIO or VSEL
J14	MODE_STBY	High/Low selection for MODE/STBY pin	<b>J14-3</b> Sets MODE/STBY pin HIGH. Effect is dependent on configuration as MODE, STBY, or both
			<b>J14-1</b> Sets MODE/STBY pin LOW. Effect is dependent on configuration as MODE, STBY, or both

**Table 2-4. TPS65214 Configuration Headers (continued)**

	Header Name	Description	Configuration
J30	EXT_LDO_VIN	External 3.3V LDO Input	External LDO supplied by VSYS
J31	PMIC_EN	PMIC enable	PMIC enable pin if EN/PB/VSENSE is configured as EN

**Figure 2-3. TPS65214EVM Header Configurations**

### 2.3.3 Test Points

The EVM contains additional headers that can serve as test points for voltage and current sense measurements. Trace assignments to the test points are shown in [Table 2-5](#).

**Table 2-5. TPS65214 EVM Test Points**

	Header Name	Associated Trace
J3	USB_5V_S	USB Input SENSE
		GND
J9	LDO1_S	LDO1 Output SENSE
		GND
J12	LDO2_S	LDO2 Output SENSE
		GND
J15	BUCK3_S	BUCK3 Output SENSE
		GND
J16	BUCK1_S	Buck1 Output SENSE
		GND
J17	BUCK2_S	BUCK2 Output SENSE
		GND
J34	GND	GND connection
J35	GND	GND connection

**Table 2-5. TPS65214 EVM Test Points (continued)**

	Header Name	Associated Trace
J36	GND	GND connection

## 3 Software

### 3.1 Graphical User Interface (GUI)

The [TPS65214-GUI](#) can be used in the browser or as a standalone application. This software provides a simple way to communicate with the device through I2C using the built-in USB2ANY using an MSP432. Details on the GUI installation and setup process are provided in this section. Note that the EVM can power up and operate without use of software.

This section covers the usage and capabilities of the [TPS65214 Graphical User Interface \(GUI\)](#) tool from Texas Instruments.

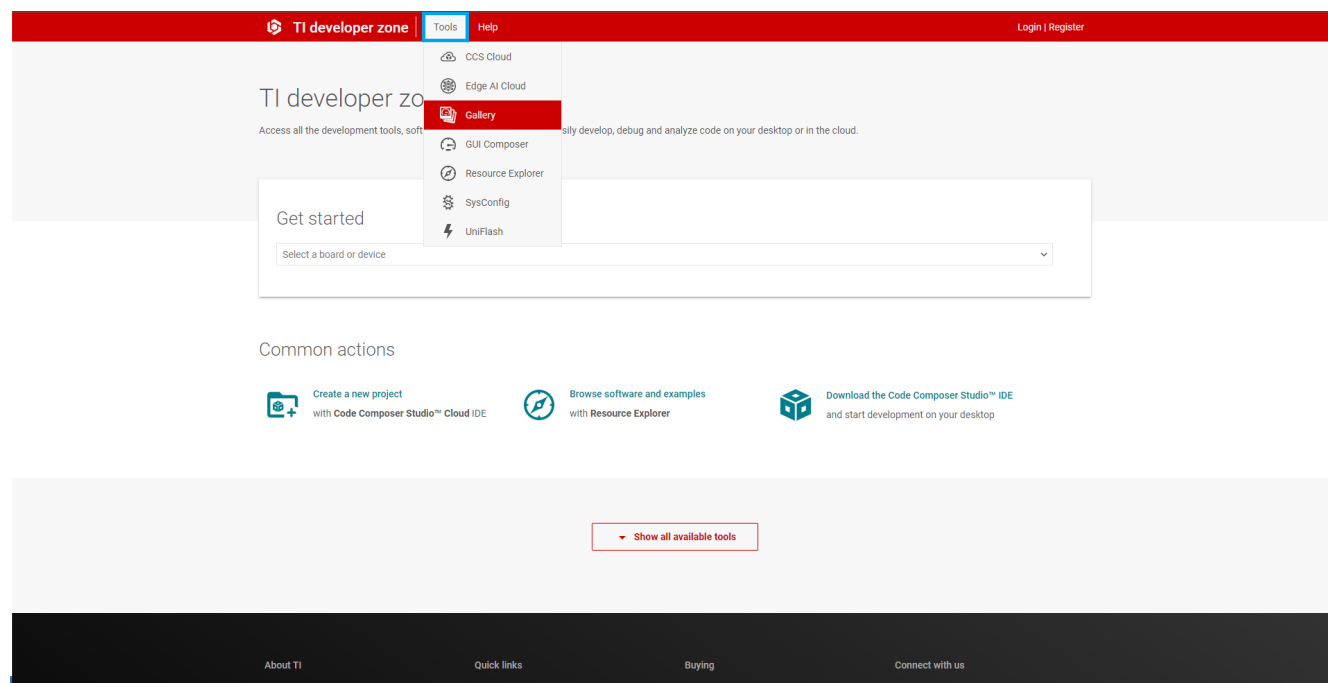

#### 3.1.1 Getting Started

Getting started involves the following steps:

1. Find the GUI within the Gallery
2. Download the required software
  - a. TI cloud agent for running the GUI from a web browser
  - b. An offline copy of the GUI
3. Launch the GUI

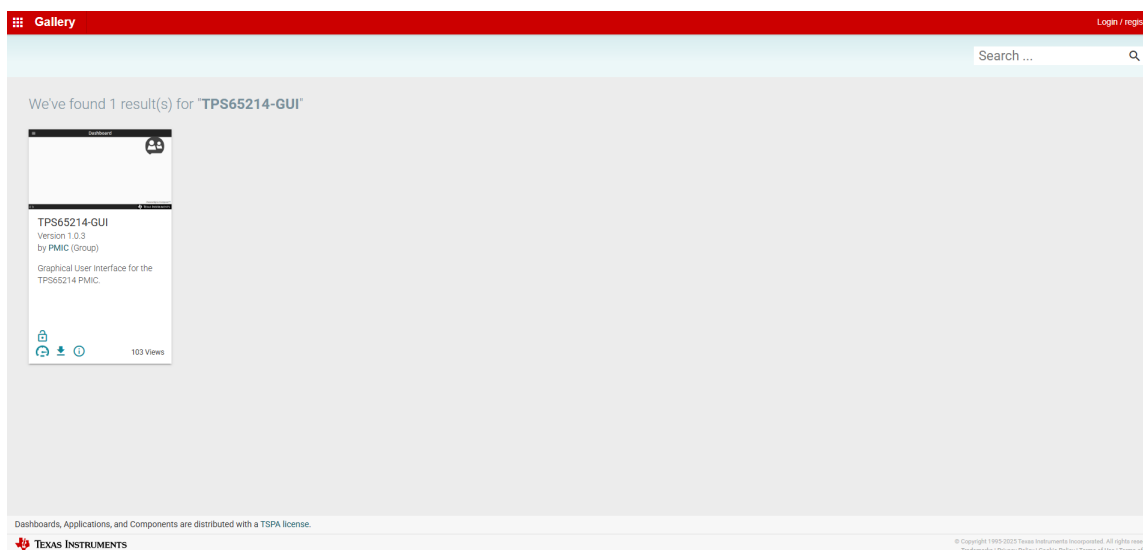

##### 3.1.1.1 Finding the GUI

The PMIC GUI is based upon GUI Composer which is compatible with either Chrome™ or Firefox™. The Chrome web browser is recommended and used throughout this document for demonstration. The PMIC GUI is also compatible with Microsoft Edge™. The GUI is found through the TI Development tools at [TI DevTools page](#). Navigating to the Gallery from the Tools tab, highlighted in blue in [Figure 3-1](#), is one way to enter the Gallery.

**Figure 3-1. GUI Composer Gallery**

In the gallery, locate the TPS65214-GUI panel shown in [Figure 3-2](#) by using the search bar and entering TPS65214-GUI.

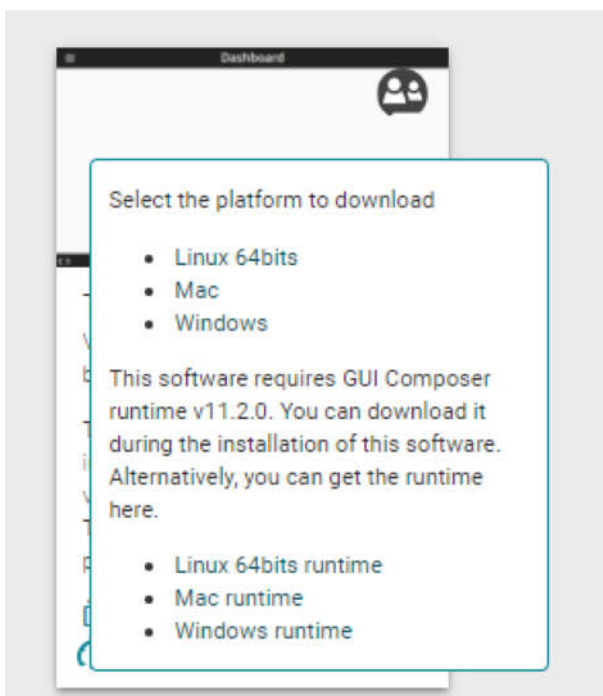

**Figure 3-2. Locating the PMIC GUI in the Gallery**

### 3.1.1.2 Downloading the Required Software

Both the standalone GUI and the GUI Composer Runtime are available from the PMIC panel. The TI Cloud Agent enables the GUI to be run through a web browser but requires an internet connection to be able to run the GUI. By contrast, the standalone GUI is much larger but does not require an internet connection.

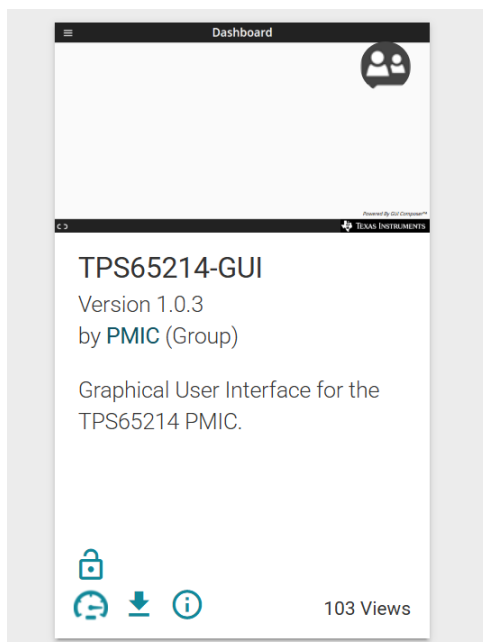

The download options are found in the pop-up window, as shown in [Figure 3-3](#), when the cursor is placed on the download icon. The upper three options offer a standalone download for the appropriate operating system, while the lower three are for the GUI Composer Runtime.

**Figure 3-3. GUI Software Download Options**

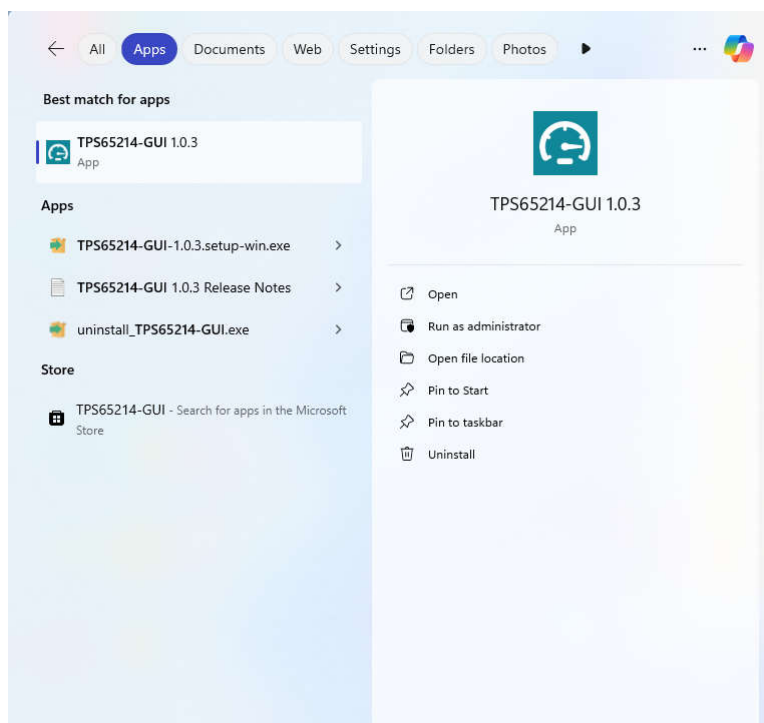

### 3.1.1.3 Launching the GUI

After downloading the appropriate software, launch the GUI locally from the PC application or from the TI Cloud using the Gallery. To use the TI Cloud version of the GUI, click anywhere in the panel, shown in [Figure 3-4](#), that is not associated with the download or information icons.

**Figure 3-4. GUI Panel Within the Gallery**

[Figure 3-5](#) shows an example of the PC application.

**Figure 3-5. PMIC GUI Desktop Application**

### 3.1.1.4 Connecting to the EVM

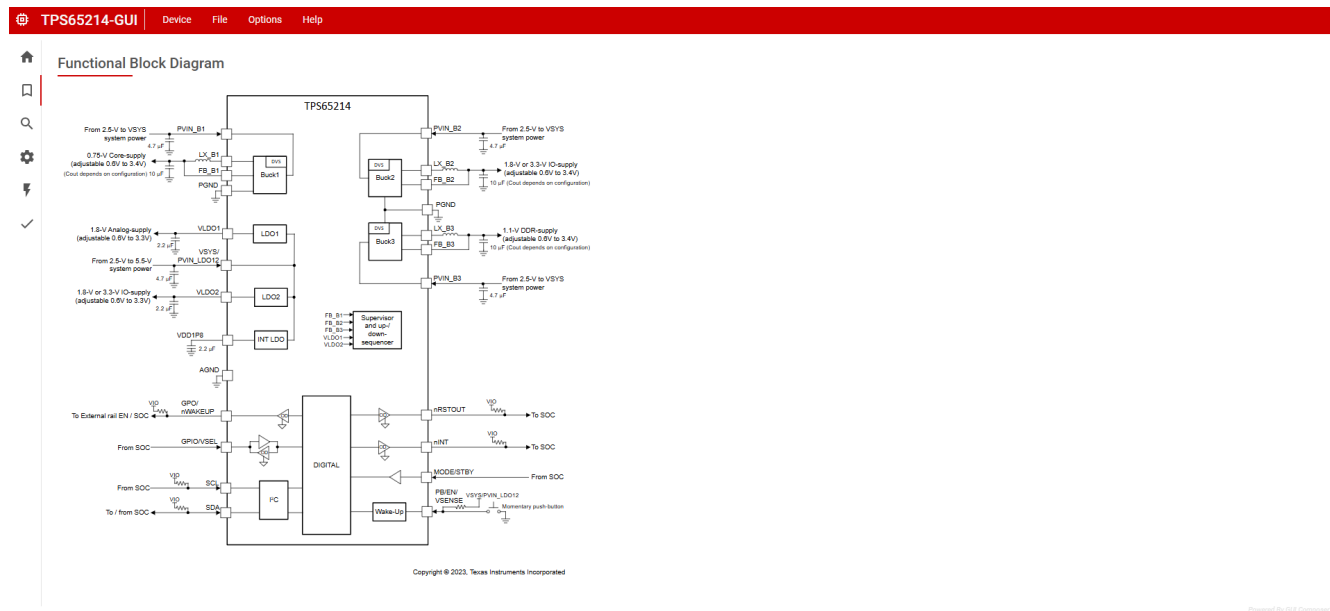

The GUI displays the Home page, shown in [Figure 3-6](#). With the buttons displayed on the Home page, users can navigate to the other GUI pages which are described in the subsequent sections. The GUI pages are also found on the left side of the GUI interface.

**Figure 3-6. GUI Home Page**

### 3.1.2 Collateral Page

The Collateral page, shown in [Figure 3-7](#), contains the functional block diagram for the TPS65214 PMIC device.

**Figure 3-7. Collateral Page**

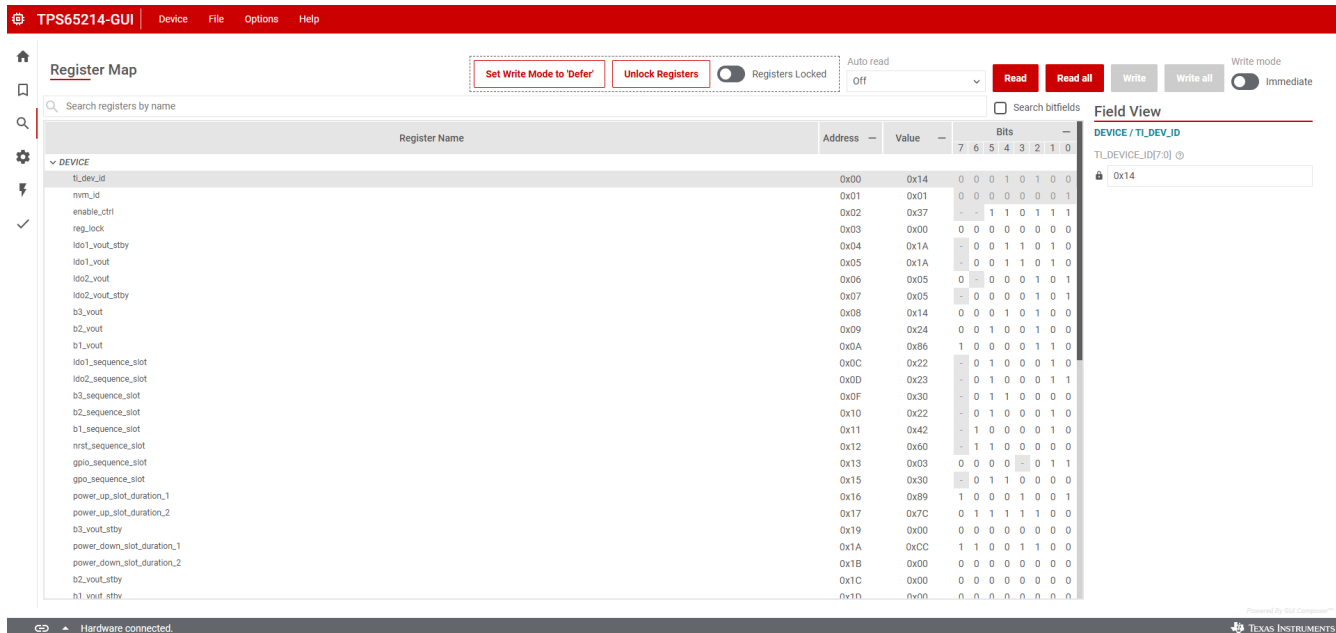

### 3.1.3 Register Map Page

The Register Map page (shown in [Figure 3-8](#)) lists the different registers available for configuration and is intended for direct reads and writes to the PMIC registers. Reading and writing registers can be done individually or all at once. Enable an Auto Read feature by using the drop-down menu next to the **READ ALL REGISTERS** button to select an automatic read timing. Use the search bar at the top of the page to search registers by name or address.

The first three columns under the search bar show the name of each register, followed by the hexadecimal address and data value. The *Bits* column contains the bit values for each register and can be hidden by unchecking the *Show Bits* box at the top of the page, under the **READ ALL REGISTERS** button. Double-clicking a bit in this section changes the bit value.

The Field View section on the right side of the page shows register bits grouped by the respective control blocks. Select the question mark icon next to the bit field label for an expanded view with more detail on the bit field. This function also highlights the corresponding bit boxes in yellow in the *Bits* column. Each field has a name shown by the blue text at the top of each box. Find the field names by using the search bar by checking the *Search Bitfields* box to the right of the search bar.

In the *Immediate Write* mode (toggle option located at the top right of the page), write buttons are grayed out because the individual registers are written immediately with each change in the Field View, change in bits, or change in hexadecimal value. In *Deferred Write* mode, the writing of a single register or all registers is deferred until the **WRITE REGISTER** or **WRITE ALL REGISTERS** button is selected.

The screenshot displays the Register Map page for the TPS65214-GUI. The main table lists registers with their names, addresses, values, and bit patterns. The bits are shown in a grid where each bit can be toggled. On the right, the Field View section provides a hierarchical view of the bit fields, with a search bar for bitfields. The top of the page features a navigation bar with tabs for Device, File, Options, and Help. Below the navigation bar, there are buttons for 'Set Write Mode to Defer', 'Unlock Registers', and a 'Registers Locked' toggle. To the right of these buttons is an 'Auto read' dropdown menu set to 'Off'. Further right are buttons for 'Read', 'Read all', 'Write', and 'Write all', along with a 'Write mode' toggle set to 'Immediate'. The bottom status bar shows 'Hardware connected' and the Texas Instruments logo.

**Figure 3-8. Register Map Page**

#### Note

Read-only registers are grayed out and locked to prevent write attempts. Reserved register bits are shown as a dash mark.

### 3.1.4 Device Configuration Page

The Device Configuration page is the main feature of the GUI and highlights the configurability of the PMIC, as shown in [Figure 3-9](#). On this page, register fields are grouped according to use case and are labeled to indicate which part of the PMIC is controlled by each block.

**Figure 3-9. Device Configuration Page**

#### 3.1.4.1 Configuration Fields

Register settings can be changed on the Device Configuration Page and follow the register write mode specified on the Register Map page (Immediate or Deferred).

The *BUCK & LDO Config* tab holds register settings for each power rail of the PMIC. (For more information on the Load Switch and BYPASS modes for the LDOs, refer to the [TPS65214 Integrated Power Management IC for ARM Cortex Processors data sheet](#)).

The *Digital Pins Config* tab is used to control settings for the enable configuration and digital I/O pins (For details on multi-function pins, see the [TPS65214 Integrated Power Management IC for ARM Cortex Processors data sheet](#)).

The *Mask Config* tab allows you to control fault reporting for PMIC protection features which includes masking for undervoltage, temperature, and interrupt signals.

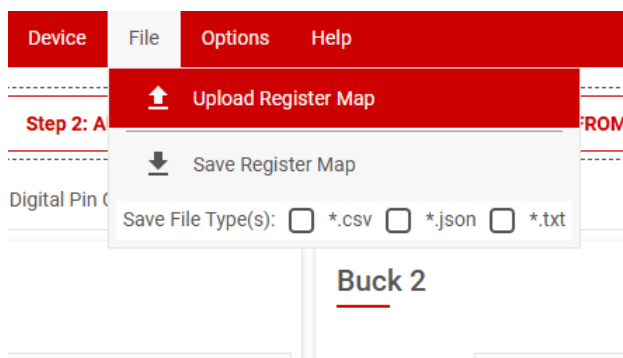

The *Monitor PMIC Status* tab holds a collection of read-only status registers that show the power rail enables and interrupts, which are displayed as digital LEDs. This section provides fast visual feedback on the PMIC and the operating conditions.

#### 3.1.4.2 Create and Load a Custom Configuration

The NVM Configuration page does not require hardware to develop an NVM configuration. Connection with an actual device is needed only when attempting to upload to a target device.

Once the registers are set to the desired configuration, locate the *File* tab at the top of the screen and select a format for the configuration file (shown in [Figure 3-10](#)). Save the register configuration in a CSV (comma separated values), JSON (JavaScript™ Object Notation), or TXT (plain text file) format. Next, use the *Save Register Map* option to download the saved configuration in the selected format.

To load an existing configuration into the NVM, use the *Load Register Map* option and locate configuration file. Save an existing register map, or download the Device OTP file from the *OTP Validation* tab for an example of the accepted format of the configuration file.

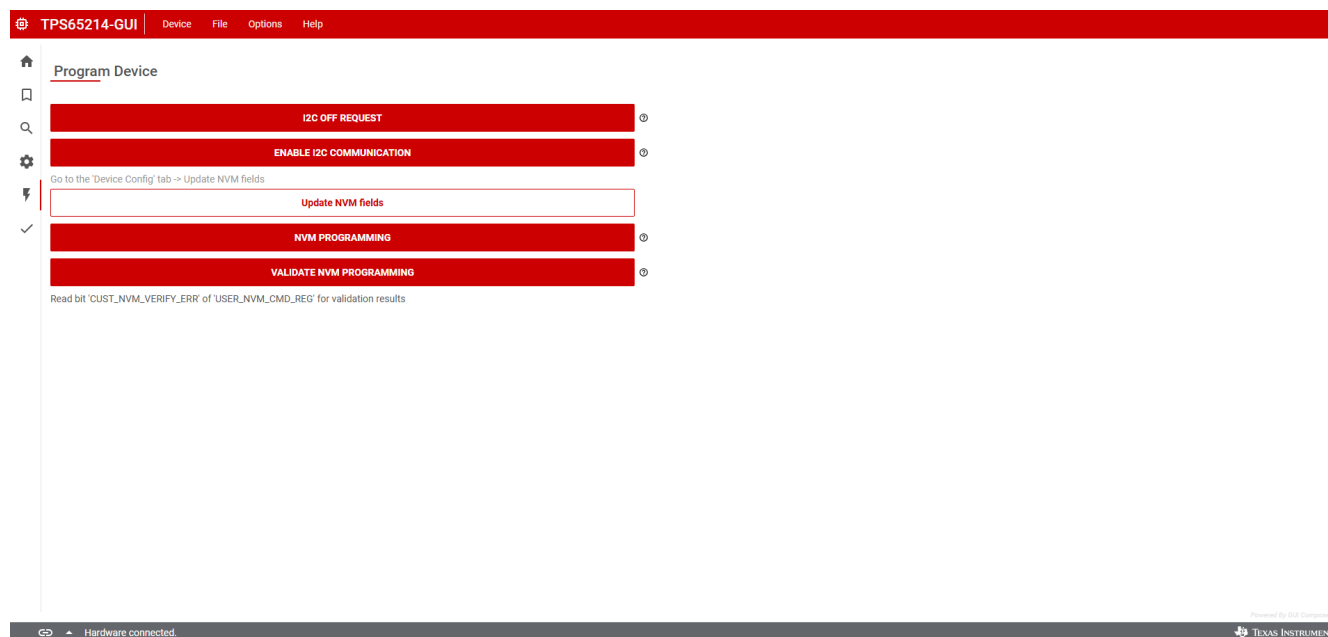

**Figure 3-10. Save and Load Register Options**

### 3.1.5 NVM Programming Page

The NVM Programming page allows re-programming the device NVM memory to change the default register settings. This page includes four main functions that correspond to the buttons shown in [Figure 3-11](#). The first two steps *I2C OFF REQUEST* and *ENABLE I2C COMMUNICATION* are only needed when re-programming the PMIC from the Initialize state (PMIC rails OFF).

- The *I2C OFF REQUEST* button triggers an OFF request through I2C and sends the PMIC to INITIALIZE state.
- The *ENABLE I2C COMMUNICATION* button enables I2C communication in INITIALIZE state.
  - Once I2C communication is enabled, users can go to the NVM configuration page to select the desired register settings or use the *File* tab options to load a pre-configured JSON or CSV file.
- The *NVM PROGRAMMING* button programs the selected register settings into the NVM.
- The *VALIDATE NVM PROGRAMMING* button reads the NVM content and compares with the selected register settings. The result (PASS or FAIL) is stored in register 0x34, field 7 *CUST\_NVM\_VERIFY\_ERR*.

**Figure 3-11. NVM Programming Page**

### 3.1.6 Additional Features

In the Options tab at the top of the GUI interface, select *Serial Port* to display information about the EVM-to-computer connection.

### **3.1.7 Connecting the EVM using USB2ANY**

First, take a look at the [USB2ANY Interface Adapter User's Guide](#) to make sure that the USB2ANY adapter has the proper firmware and components. Additional information on the adapter pin functions is included in the document.

To connect the EVM to a computer using the USB2ANY adapter, plug the ribbon cable from the USB2ANY into the J2 header on the EVM. The ribbon cable is keyed at both ends to make sure that all the pins are connected correctly. Plug the USB cable extending from the other side of the USB2ANY into a computer. The GUI automatically connects to the computer.

## 6 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision * (February 2025) to Revision A (July 2025)	Page
• Updated the numbering format for tables, figures, and cross-references throughout the document.....	1
• Added USB2ANY support to <i>Features</i> .....	1
• Moved <a href="#">Section 2</a> to <a href="#">Section 1.5</a> .....	3
• Updated Host Computer connections in <i>Requirements</i> .....	4
• Updated pin descriptions in <a href="#">Table 2-2</a> .....	4
• Changed <i>TPS6521401 Power-Up Sequence</i> and <i>TPS6521401 Power-Down Sequence</i> figures to updated <i>TPS6521401 Power Sequence</i> timing diagram.....	5

## STANDARD TERMS FOR EVALUATION MODULES

1. *Delivery:* TI delivers TI evaluation boards, kits, or modules, including any accompanying demonstration software, components, and/or documentation which may be provided together or separately (collectively, an "EVM" or "EVMs") to the User ("User") in accordance with the terms set forth herein. User's acceptance of the EVM is expressly subject to the following terms.
  - 1.1 EVMs are intended solely for product or software developers for use in a research and development setting to facilitate feasibility evaluation, experimentation, or scientific analysis of TI semiconductors products. EVMs have no direct function and are not finished products. EVMs shall not be directly or indirectly assembled as a part or subassembly in any finished product. For clarification, any software or software tools provided with the EVM ("Software") shall not be subject to the terms and conditions set forth herein but rather shall be subject to the applicable terms that accompany such Software
  - 1.2 EVMs are not intended for consumer or household use. EVMs may not be sold, sublicensed, leased, rented, loaned, assigned, or otherwise distributed for commercial purposes by Users, in whole or in part, or used in any finished product or production system.
2. *Limited Warranty and Related Remedies/Disclaimers:*
  - 2.1 These terms do not apply to Software. The warranty, if any, for Software is covered in the applicable Software License Agreement.
  - 2.2 TI warrants that the TI EVM will conform to TI's published specifications for ninety (90) days after the date TI delivers such EVM to User. Notwithstanding the foregoing, TI shall not be liable for a nonconforming EVM if (a) the nonconformity was caused by neglect, misuse or mistreatment by an entity other than TI, including improper installation or testing, or for any EVMs that have been altered or modified in any way by an entity other than TI, (b) the nonconformity resulted from User's design, specifications or instructions for such EVMs or improper system design, or (c) User has not paid on time. Testing and other quality control techniques are used to the extent TI deems necessary. TI does not test all parameters of each EVM. User's claims against TI under this Section 2 are void if User fails to notify TI of any apparent defects in the EVMs within ten (10) business days after delivery, or of any hidden defects with ten (10) business days after the defect has been detected.
  - 2.3 TI's sole liability shall be at its option to repair or replace EVMs that fail to conform to the warranty set forth above, or credit User's account for such EVM. TI's liability under this warranty shall be limited to EVMs that are returned during the warranty period to the address designated by TI and that are determined by TI not to conform to such warranty. If TI elects to repair or replace such EVM, TI shall have a reasonable time to repair such EVM or provide replacements. Repaired EVMs shall be warranted for the remainder of the original warranty period. Replaced EVMs shall be warranted for a new full ninety (90) day warranty period.

### **WARNING**

**Evaluation Kits are intended solely for use by technically qualified, professional electronics experts who are familiar with the dangers and application risks associated with handling electrical mechanical components, systems, and subsystems.**

**User shall operate the Evaluation Kit within TI's recommended guidelines and any applicable legal or environmental requirements as well as reasonable and customary safeguards. Failure to set up and/or operate the Evaluation Kit within TI's recommended guidelines may result in personal injury or death or property damage. Proper set up entails following TI's instructions for electrical ratings of interface circuits such as input, output and electrical loads.**

**NOTE:**

EXPOSURE TO ELECTROSTATIC DISCHARGE (ESD) MAY CAUSE DEGRADATION OR FAILURE OF THE EVALUATION KIT; TI RECOMMENDS STORAGE OF THE EVALUATION KIT IN A PROTECTIVE ESD BAG.

### 3 Regulatory Notices:

#### 3.1 United States

##### 3.1.1 Notice applicable to EVMs not FCC-Approved:

**FCC NOTICE:** This kit is designed to allow product developers to evaluate electronic components, circuitry, or software associated with the kit to determine whether to incorporate such items in a finished product and software developers to write software applications for use with the end product. This kit is not a finished product and when assembled may not be resold or otherwise marketed unless all required FCC equipment authorizations are first obtained. Operation is subject to the condition that this product not cause harmful interference to licensed radio stations and that this product accept harmful interference. Unless the assembled kit is designed to operate under part 15, part 18 or part 95 of this chapter, the operator of the kit must operate under the authority of an FCC license holder or must secure an experimental authorization under part 5 of this chapter.

##### 3.1.2 For EVMs annotated as FCC – FEDERAL COMMUNICATIONS COMMISSION Part 15 Compliant:

#### **CAUTION**

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

#### **FCC Interference Statement for Class A EVM devices**

*NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.*

#### **FCC Interference Statement for Class B EVM devices**

*NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:*

- *Reorient or relocate the receiving antenna.*
- *Increase the separation between the equipment and receiver.*
- *Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.*
- *Consult the dealer or an experienced radio/TV technician for help.*

#### 3.2 Canada

##### 3.2.1 For EVMs issued with an Industry Canada Certificate of Conformance to RSS-210 or RSS-247

#### **Concerning EVMs Including Radio Transmitters:**

This device complies with Industry Canada license-exempt RSSs. Operation is subject to the following two conditions:

(1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

#### **Concernant les EVMs avec appareils radio:**

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes: (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

#### **Concerning EVMs Including Detachable Antennas:**

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication. This radio transmitter has been approved by Industry Canada to operate with the antenna types listed in the user guide with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

### Concernant les EVMs avec antennes détachables

Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante. Le présent émetteur radio a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés dans le manuel d'usage et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

#### 3.3 Japan

3.3.1 *Notice for EVMs delivered in Japan:* Please see [http://www.tij.co.jp/sds/ti\\_ja/general/eStore/notice\\_01.page](http://www.tij.co.jp/sds/ti_ja/general/eStore/notice_01.page) 日本国内に輸入される評価用キット、ボードについては、次のところをご覧ください。

<https://www.ti.com/ja-jp/legal/notice-for-evaluation-kits-delivered-in-japan.html>

3.3.2 *Notice for Users of EVMs Considered "Radio Frequency Products" in Japan:* EVMs entering Japan may not be certified by TI as conforming to Technical Regulations of Radio Law of Japan.

If User uses EVMs in Japan, not certified to Technical Regulations of Radio Law of Japan, User is required to follow the instructions set forth by Radio Law of Japan, which includes, but is not limited to, the instructions below with respect to EVMs (which for the avoidance of doubt are stated strictly for convenience and should be verified by User):

1. Use EVMs in a shielded room or any other test facility as defined in the notification #173 issued by Ministry of Internal Affairs and Communications on March 28, 2006, based on Sub-section 1.1 of Article 6 of the Ministry's Rule for Enforcement of Radio Law of Japan,
2. Use EVMs only after User obtains the license of Test Radio Station as provided in Radio Law of Japan with respect to EVMs, or
3. Use of EVMs only after User obtains the Technical Regulations Conformity Certification as provided in Radio Law of Japan with respect to EVMs. Also, do not transfer EVMs, unless User gives the same notice above to the transferee. Please note that if User does not follow the instructions above, User will be subject to penalties of Radio Law of Japan.

【無線電波を送信する製品の開発キットをお使いになる際の注意事項】 開発キットの中には技術基準適合証明を受けていないものがあります。技術適合証明を受けていないもののご使用に際しては、電波法遵守のため、以下のいずれかの措置を取っていただく必要がありますのでご注意ください。

1. 電波法施行規則第6条第1項第1号に基づく平成18年3月28日総務省告示第173号で定められた電波暗室等の試験設備でご使用いただく。
2. 実験局の免許を取得後ご使用いただく。
3. 技術基準適合証明を取得後ご使用いただく。

なお、本製品は、上記の「ご使用にあたっての注意」を譲渡先、移転先に通知しない限り、譲渡、移転できないものとします。

上記を遵守頂けない場合は、電波法の罰則が適用される可能性があることをご留意ください。 日本テキサス・インスツルメンツ株式会社  
東京都新宿区西新宿 6 丁目 2 4 番 1 号  
西新宿三井ビル

3.3.3 *Notice for EVMs for Power Line Communication:* Please see [http://www.tij.co.jp/sds/ti\\_ja/general/eStore/notice\\_02.page](http://www.tij.co.jp/sds/ti_ja/general/eStore/notice_02.page)

電力線搬送波通信についての開発キットをお使いになる際の注意事項については、次のところをご覧ください。<https://www.ti.com/ja-jp/legal/notice-for-evaluation-kits-for-power-line-communication.html>

#### 3.4 European Union

3.4.1 *For EVMs subject to EU Directive 2014/30/EU (Electromagnetic Compatibility Directive):*

This is a class A product intended for use in environments other than domestic environments that are connected to a low-voltage power-supply network that supplies buildings used for domestic purposes. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

---

4 *EVM Use Restrictions and Warnings:*

4.1 EVMS ARE NOT FOR USE IN FUNCTIONAL SAFETY AND/OR SAFETY CRITICAL EVALUATIONS, INCLUDING BUT NOT LIMITED TO EVALUATIONS OF LIFE SUPPORT APPLICATIONS.

4.2 User must read and apply the user guide and other available documentation provided by TI regarding the EVM prior to handling or using the EVM, including without limitation any warning or restriction notices. The notices contain important safety information related to, for example, temperatures and voltages.

4.3 *Safety-Related Warnings and Restrictions:*

4.3.1 User shall operate the EVM within TI's recommended specifications and environmental considerations stated in the user guide, other available documentation provided by TI, and any other applicable requirements and employ reasonable and customary safeguards. Exceeding the specified performance ratings and specifications (including but not limited to input and output voltage, current, power, and environmental ranges) for the EVM may cause personal injury or death, or property damage. If there are questions concerning performance ratings and specifications, User should contact a TI field representative prior to connecting interface electronics including input power and intended loads. Any loads applied outside of the specified output range may also result in unintended and/or inaccurate operation and/or possible permanent damage to the EVM and/or interface electronics. Please consult the EVM user guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative. During normal operation, even with the inputs and outputs kept within the specified allowable ranges, some circuit components may have elevated case temperatures. These components include but are not limited to linear regulators, switching transistors, pass transistors, current sense resistors, and heat sinks, which can be identified using the information in the associated documentation. When working with the EVM, please be aware that the EVM may become very warm.

4.3.2 EVMs are intended solely for use by technically qualified, professional electronics experts who are familiar with the dangers and application risks associated with handling electrical mechanical components, systems, and subsystems. User assumes all responsibility and liability for proper and safe handling and use of the EVM by User or its employees, affiliates, contractors or designees. User assumes all responsibility and liability to ensure that any interfaces (electronic and/or mechanical) between the EVM and any human body are designed with suitable isolation and means to safely limit accessible leakage currents to minimize the risk of electrical shock hazard. User assumes all responsibility and liability for any improper or unsafe handling or use of the EVM by User or its employees, affiliates, contractors or designees.

4.4 User assumes all responsibility and liability to determine whether the EVM is subject to any applicable international, federal, state, or local laws and regulations related to User's handling and use of the EVM and, if applicable, User assumes all responsibility and liability for compliance in all respects with such laws and regulations. User assumes all responsibility and liability for proper disposal and recycling of the EVM consistent with all applicable international, federal, state, and local requirements.

5. *Accuracy of Information:* To the extent TI provides information on the availability and function of EVMs, TI attempts to be as accurate as possible. However, TI does not warrant the accuracy of EVM descriptions, EVM availability or other information on its websites as accurate, complete, reliable, current, or error-free.

6. *Disclaimers:*

6.1 EXCEPT AS SET FORTH ABOVE, EVMS AND ANY MATERIALS PROVIDED WITH THE EVM (INCLUDING, BUT NOT LIMITED TO, REFERENCE DESIGNS AND THE DESIGN OF THE EVM ITSELF) ARE PROVIDED "AS IS" AND "WITH ALL FAULTS." TI DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, REGARDING SUCH ITEMS, INCLUDING BUT NOT LIMITED TO ANY EPIDEMIC FAILURE WARRANTY OR IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF ANY THIRD PARTY PATENTS, COPYRIGHTS, TRADE SECRETS OR OTHER INTELLECTUAL PROPERTY RIGHTS.

6.2 EXCEPT FOR THE LIMITED RIGHT TO USE THE EVM SET FORTH HEREIN, NOTHING IN THESE TERMS SHALL BE CONSTRUED AS GRANTING OR CONFERRING ANY RIGHTS BY LICENSE, PATENT, OR ANY OTHER INDUSTRIAL OR INTELLECTUAL PROPERTY RIGHT OF TI, ITS SUPPLIERS/LICENSORS OR ANY OTHER THIRD PARTY, TO USE THE EVM IN ANY FINISHED END-USER OR READY-TO-USE FINAL PRODUCT, OR FOR ANY INVENTION, DISCOVERY OR IMPROVEMENT, REGARDLESS OF WHEN MADE, CONCEIVED OR ACQUIRED.

7. *USER'S INDEMNITY OBLIGATIONS AND REPRESENTATIONS.* USER WILL DEFEND, INDEMNIFY AND HOLD TI, ITS LICENSORS AND THEIR REPRESENTATIVES HARMLESS FROM AND AGAINST ANY AND ALL CLAIMS, DAMAGES, LOSSES, EXPENSES, COSTS AND LIABILITIES (COLLECTIVELY, "CLAIMS") ARISING OUT OF OR IN CONNECTION WITH ANY HANDLING OR USE OF THE EVM THAT IS NOT IN ACCORDANCE WITH THESE TERMS. THIS OBLIGATION SHALL APPLY WHETHER CLAIMS ARISE UNDER STATUTE, REGULATION, OR THE LAW OF TORT, CONTRACT OR ANY OTHER LEGAL THEORY, AND EVEN IF THE EVM FAILS TO PERFORM AS DESCRIBED OR EXPECTED.

8. *Limitations on Damages and Liability:*

8.1 *General Limitations.* IN NO EVENT SHALL TI BE LIABLE FOR ANY SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF THESE TERMS OR THE USE OF THE EVMS, REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. EXCLUDED DAMAGES INCLUDE, BUT ARE NOT LIMITED TO, COST OF REMOVAL OR REINSTALLATION, ANCILLARY COSTS TO THE PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES, RETESTING, OUTSIDE COMPUTER TIME, LABOR COSTS, LOSS OF GOODWILL, LOSS OF PROFITS, LOSS OF SAVINGS, LOSS OF USE, LOSS OF DATA, OR BUSINESS INTERRUPTION. NO CLAIM, SUIT OR ACTION SHALL BE BROUGHT AGAINST TI MORE THAN TWELVE (12) MONTHS AFTER THE EVENT THAT GAVE RISE TO THE CAUSE OF ACTION HAS OCCURRED.

8.2 *Specific Limitations.* IN NO EVENT SHALL TI'S AGGREGATE LIABILITY FROM ANY USE OF AN EVM PROVIDED HEREUNDER, INCLUDING FROM ANY WARRANTY, INDEMNITY OR OTHER OBLIGATION ARISING OUT OF OR IN CONNECTION WITH THESE TERMS, EXCEED THE TOTAL AMOUNT PAID TO TI BY USER FOR THE PARTICULAR EVM(S) AT ISSUE DURING THE PRIOR TWELVE (12) MONTHS WITH RESPECT TO WHICH LOSSES OR DAMAGES ARE CLAIMED. THE EXISTENCE OF MORE THAN ONE CLAIM SHALL NOT ENLARGE OR EXTEND THIS LIMIT.

9. *Return Policy.* Except as otherwise provided, TI does not offer any refunds, returns, or exchanges. Furthermore, no return of EVM(s) will be accepted if the package has been opened and no return of the EVM(s) will be accepted if they are damaged or otherwise not in a resalable condition. If User feels it has been incorrectly charged for the EVM(s) it ordered or that delivery violates the applicable order, User should contact TI. All refunds will be made in full within thirty (30) working days from the return of the components(s), excluding any postage or packaging costs.
10. *Governing Law:* These terms and conditions shall be governed by and interpreted in accordance with the laws of the State of Texas, without reference to conflict-of-laws principles. User agrees that non-exclusive jurisdiction for any dispute arising out of or relating to these terms and conditions lies within courts located in the State of Texas and consents to venue in Dallas County, Texas. Notwithstanding the foregoing, any judgment may be enforced in any United States or foreign court, and TI may seek injunctive relief in any United States or foreign court.
