

Test Report: PMP30338

Automotive dual port USB Type-C reference design (2x 15 W)

Description

This reference design showcases a system implementation of a dual port USB Type-C charger. The design includes input reverse polarity protection, input filtering and two individual USB Type-C charger circuits, which can supply up to 3.0 A each. The circuit has been space optimized to fit into a PCB area of 38 mm x 41 mm (without connectors) to meet current automotive requirements. Very good efficiency ensures that the maximum temperature rise is only 45.5 K.

An IMPORTANT NOTICE at the end of this TI reference design addresses authorized use, intellectual property matters and other important disclaimers and information.

1 Test Prerequisites

1.1 Voltage and Current Requirements

Table 1. Voltage and Current Requirements

| PARAMETER | SPECIFICATIONS |
|-----------------------------|---------------------------------|
| V_{IN} | 6 V..16 V, 13 V nom., 36 V peak |
| V_{OUT} | 2x 5 V at 3.0 A max. |
| Nominal switching frequency | 400 kHz (spread spectrum) |

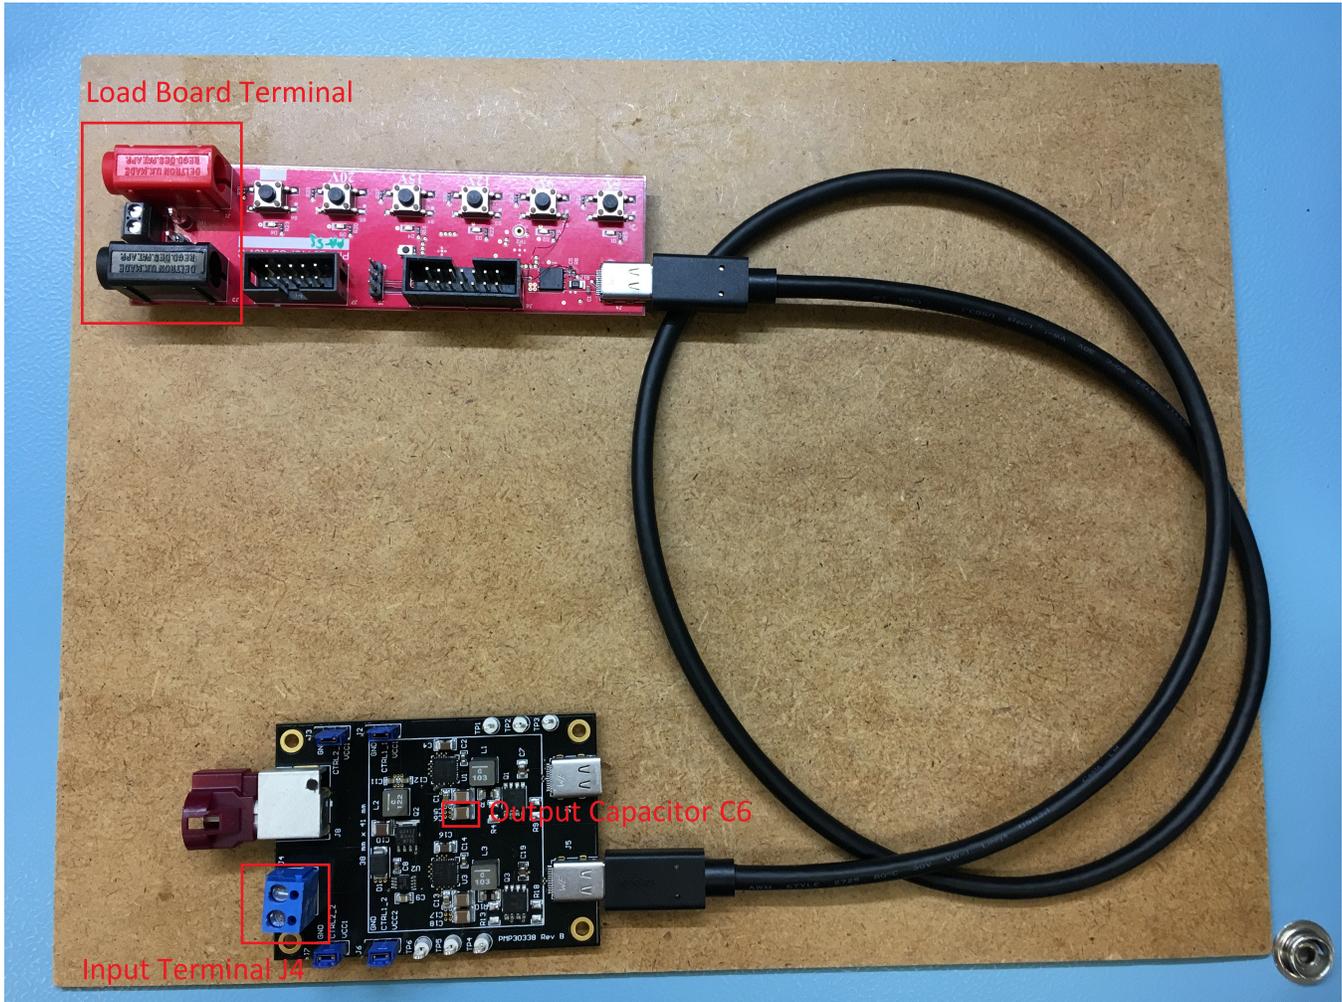

1.2 Required Equipment

- PMP30338
- USB Type-C to Type-C plug 3.1 cable
- PMP20413 USB Type-C load board

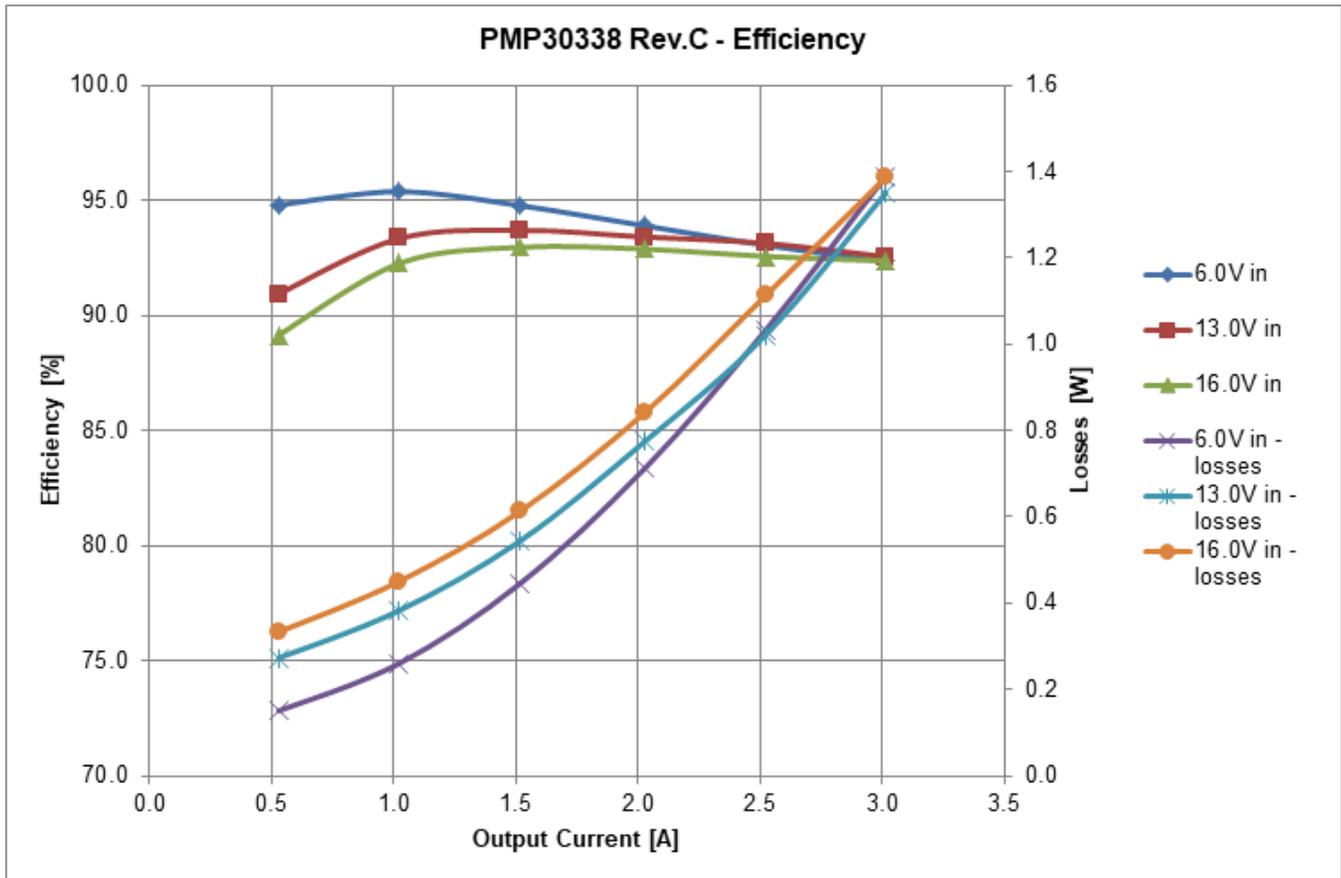

2 Testing and Results

The efficiency and load regulation measurements were made with the USB Type-C to Type-C plug cable attached to the PMP30338 and the PMP20413 load board. The input voltage was measured at J4. The output voltage was measured at C6 for the true converter efficiency and at the test points of the load board to showcase the effect of the output droop compensation of the TPS25830-Q1.
