TEXAS INSTRUMENTS
CD4049UB, CD4050B
JAJSJB0K – AUGUST 1998 – REVISED JUNE 2020

CD4049UB および CD4050B CMOS ヘキサ反転バッファ / コンバータ

1 特長

- CD4049UB 反転
- CD4050B 非反転
- 2 つの TTL 負荷を駆動するための大きなシンク電流
- High/Low ロジック・レベル変換
- 20V で静止電流を 100% テスト済み
- パッケージの温度範囲全体にわたって 18V 時に最大入力電流 1μA、25℃では 18V 時に 100nA
- 5V、10V、15V のパラメータ定格

2 アプリケーション

- CMOS から DTL または TTL へのヘキサ・コンバータ
- CMOS 電流シンクまたはソース・ドライバ
- CMOS High/Low ロジック・レベル・コンバータ

3 説明

CD4049UB および CD4050B デバイスは反転および非反転ヘキサ・バッファであり、1 つの電源電圧 (V_{CC}) のみを使ったロジック・レベル変換が可能です。これらのデバイスをロジック・レベル変換に使う場合、入力信号の High レベル (V_{IH}) は V_{CC} 電源電圧を上回ることができます。これらのデバイスは、CMOS から DTL または TTL へのコンバータとして使うことを意図しており、2 つの DTL または TTL 負荷を直接駆動できます。(V_{CC} = 5V、V_{OL} ≦ 0.4V、I_{OL} ≧ 3.3mA)

デバイス情報

部品番号 (1)	パッケージ	本体サイズ (公称)
CD4049UBE、CD4050BE	PDIP (16)	6.35mm × 19.30mm
CD4049UBD、CD4050BD	SOIC (16)	9.90mm × 3.91mm
CD4049UBDW、CD4050BDW	SOIC (16)	10.30mm × 7.50mm
CD4049UBNS、CD4050BNS	SO (16)	10.30mm × 5.30mm
CD4049UBPW、CD4050BPW	TSSOP (16)	5.00mm × 4.40mm

4 Revision History

資料番号末尾の英字は改訂を表しています。その改訂履歴は英語版に準じています。

Changes from Revision J (September 2016) to Revision K (June 2020) — **Page**

- 文書全体にわたって表、図、相互参照の採番方法を更新.....1
- 「デバイス情報」の表を正しいパッケージ寸法で更新.....1

Changes from Revision I (May 2004) to Revision J (September 2016) — **Page**

- 「*ESD 定格*」表、「*機能説明*」セクション、「*デバイスの機能モード*」セクション、「*アプリケーションと実装*」セクション、「*電源に関する推奨事項*」セクション、「*レイアウト*」セクション、「*デバイスおよびドキュメントのサポート*」セクション、「*メカニカル、パッケージ、および注文情報*」セクションを追加。.....1
- 「*注文情報*」表を削除 (データシートの末尾にある POA を参照).....1
- Changed Storage temperature minimum value from 65 to –65.....4
- Changed $R_{\theta JA}$ values for the CD4049UB device: D (SOIC) from 73 to 81.6, DW (SOIC) from 57 to 81.6, E (PDIP) from 67 to 49.5, NS (SO) from 64 to 84.3, and PW (TSSOP) from 108 to 108.9.....5
- Changed $R_{\theta JA}$ values for the CD4050B device: D (SOIC) from 73 to 81.6, DW (SOIC) from 57 to 81.2, E (PDIP) from 67 to 49.7, NS (SO) from 64 to 83.8, and PW (TSSOP) from 108 to 108.4.....5

5 Pin Configuration and Functions

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

		MIN	MAX	UNIT
Supply voltage	VCC to VSS	–0.5	20	V
DC input current, I_{IK}	Any one input		±10	mA
Lead temperature (soldering, 10 s)	SOIC, lead tips only		265	°C
Junction temperature, T_J			150	°C
Storage temperature, T_{stg}		–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under セクション 6.3. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±1500	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101(2)	±1000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_{CC}	Supply voltage	3	18	V
T_A	Operating temperature	–55	125	°C

6.4 Thermal Information

THERMAL METRIC[1]		CD4049UB					CD4050B					UNIT

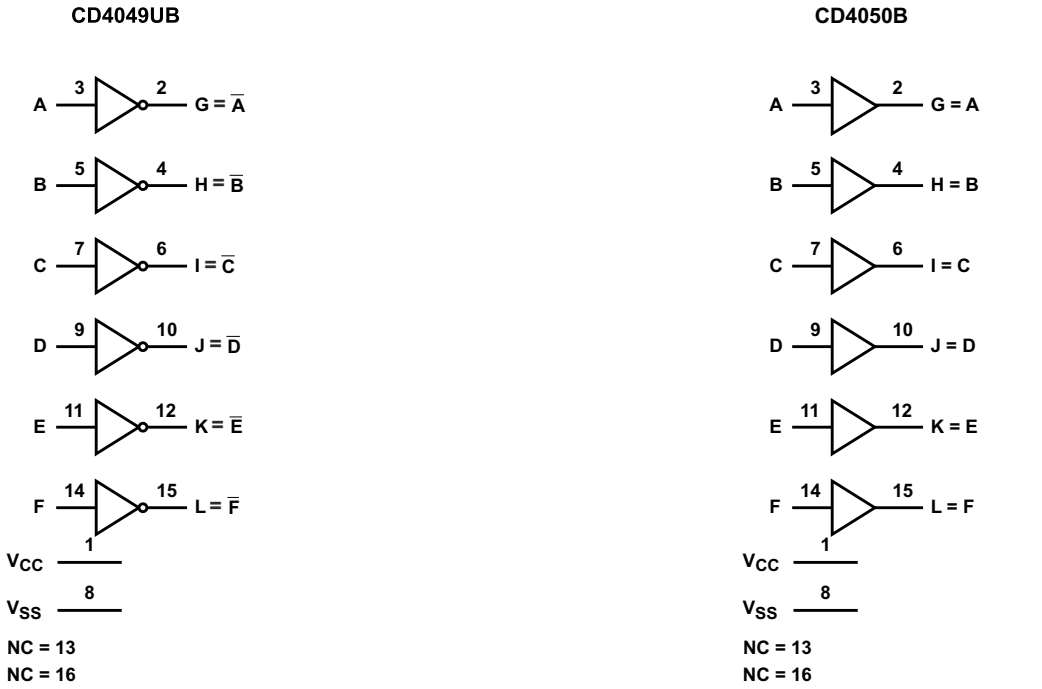
8 Detailed Description

8.1 Overview

The CD4049UB device is an inverting hex buffer; the CD4050B device is a noninverting hex buffer. These devices do logic-level conversions and have a high sink current that can drive two TTL loads. These devices also have low input current of 1 µA across the full temperature range at 18 V.

The CD4049UB and CD4050B devices are designated as replacements for CD4009UB and CD4010B devices, respectively. Because the CD4049UB and CD4050B require only one power supply, they are preferred over the CD4009UB and CD4010B and should be used in place of the CD4009UB and CD4010B in all inverter, current driver, or logic-level conversion applications. In these applications the CD4049UB and CD4050B are pin compatible with the CD4009UB and CD4010B respectively, and can be substituted for these devices in existing as well as in new designs. Pin 16 (NC) is not connected internally on the CD4049UB or CD4050B, therefore, connection to this terminal is of no consequence to circuit operation. TI recommends the CD4069UB hex inverter is recommended for applications not requiring high sink-current or voltage conversion.

8.2 Functional Block Diagram



8.3 Feature Description

CD4049UB and CD4050B have standardized symmetrical output characteristics and a wide operating voltage from 3 V to 18 V with quiescent current tested at 20 V. These devices have transition times of t_{TLH} = 40 ns and t_{THL} = 20 ns (typical) at 10 V. The operating temperature is from –55°C to 125°C.

8.4 Device Functional Modes

表 8-1 shows the functional modes for CD4049UB. 表 8-2 shows the functional modes for CD4050B.

9 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The CD4049UB and CD4050B devices have low input currents of 1 µA at 18 V over full package-temperature range and 100 nA at 18 V, 25°C. These devices have a wide operating voltage from 3 V to 18 V and used in high-voltage applications.

9.2 Typical Application

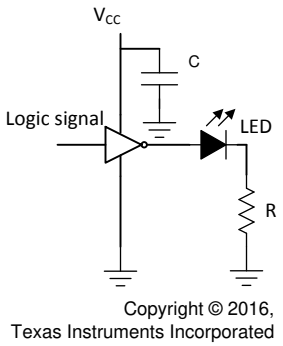

図 9-1. CD4049UB Application

9.2.1 Design Requirements

The CD4049UB device is the industry's highest logic inverter operating at 18 V under recommended conditions. These devices have high sink current capabilities.

9.2.2 Detailed Design Procedure

The recommended input conditions for 図 9-1 includes rise time and fall time specifications (see Δt/ΔV in *Recommended Operating Conditions)* and specified high and low levels (see V_{IH} and V_{IL} in *Recommended Operating Conditions)*. Inputs are not overvoltage tolerant and must be below V_{CC} level because of the presence of input clamp diodes to VCC.

The recommended output condition for the CD4049UB application includes specific load currents. Load currents must be limited so as to not exceed the total power (continuous current through VCC or GND) for the device. These limits are in the *Absolute Maximum Ratings*. Outputs must not be pulled above V_{CC}.

9.2.3 Application Curves

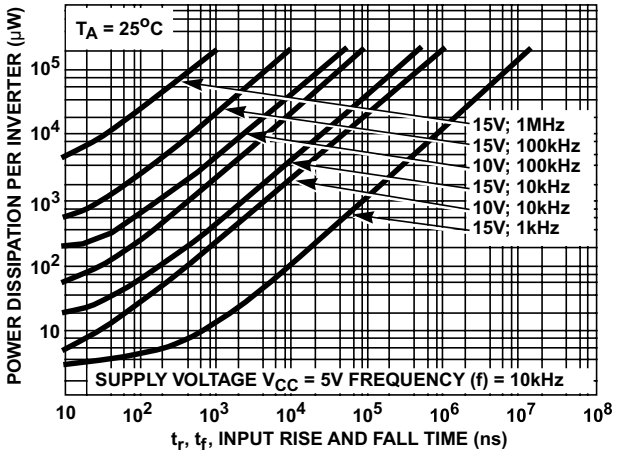

図 9-2. Typical Power Dissipation vs Input Rise and Fall Times Per Inverter for CD4049UB

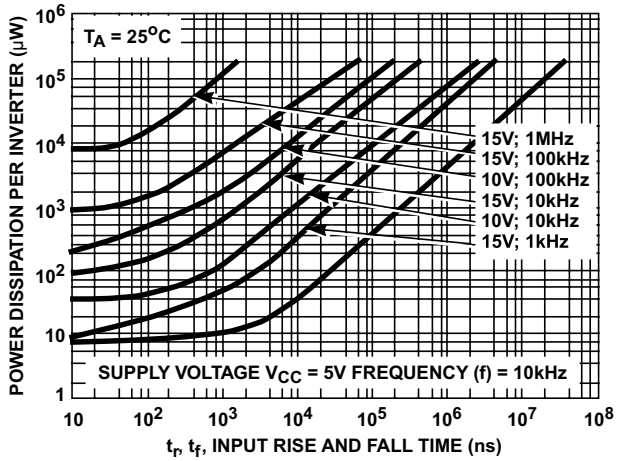

図 9-3. Typical Power Dissipation vs Input Rise and Fall Times Per Buffer for CD4050B

10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating in *Recommended Operating Conditions*.

Each VCC pin must have a good bypass capacitor to prevent power disturbance. For devices with a single supply, TI recommends a 0.1-µF capacitor. If there are multiple VCC pins, then TI recommends a 0.01-µF or 0.022-µF capacitor for each power pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. 0.1-µF and 1-µF capacitors are commonly used in parallel. The bypass capacitor must be installed as close to the power pin as possible for best results.

11 Layout

11.1 Layout Guidelines

When using multiple bit logic devices, inputs must never float.

In many cases, digital logic device functions or parts of these functions are unused (for example, when only two inputs of a triple-input and gate are used, or only 3 of the 4 buffer gates are used). Such input pins must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. This rule must be observed under all circumstances specified in the next paragraph.

All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. See *Implications of Slow or Floating CMOS Inputs* for more information on the effects of floating inputs. The logic level must apply to any particular unused input depending on the function of the device. Generally, they are tied to GND or VCC (whichever is convenient).

11.2 Layout Example

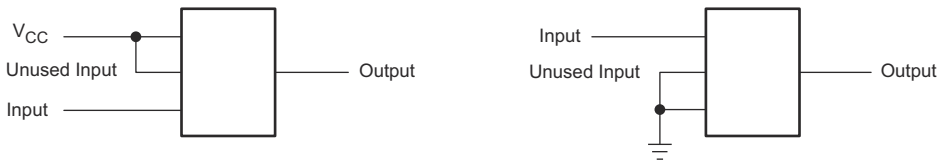

図 11-1. Layout Diagram

12 Device and Documentation Support

12.1 Documentation Support

12.1.1 Related Documentation

For related documentation see the following:

Implications of Slow or Floating CMOS Inputs (SCBA004)

12.2 Related Links

The table below lists quick access links. Categories include technical documents, support and community resources, tools and software, and quick access to sample or buy.

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

OTHER QUALIFIED VERSIONS OF CD4049UB, CD4049UB-MIL, CD4050B, CD4050B-MIL :

- Catalog : CD4049UB, CD4050B
- Military : CD4049UB-MIL, CD4050B-MIL

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product

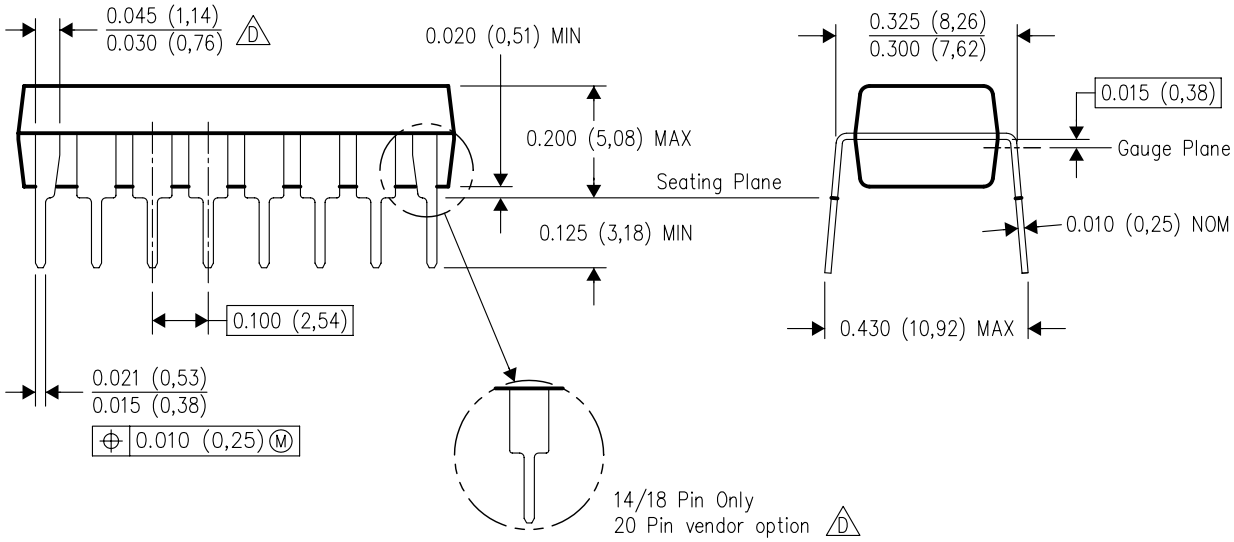
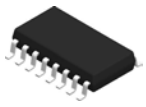
MS–001 VARIATION (C)	AA	BB	AC	AD



4040049/E 12/2002

NOTES:
A. All linear dimensions are in inches (millimeters).
B. This drawing is subject to change without notice.
C. Falls within JEDEC MS–001, except 18 and 20 pin minimum body length (Dim A).
D. The 20 pin end lead shoulder width is a vendor option, either half or full width.

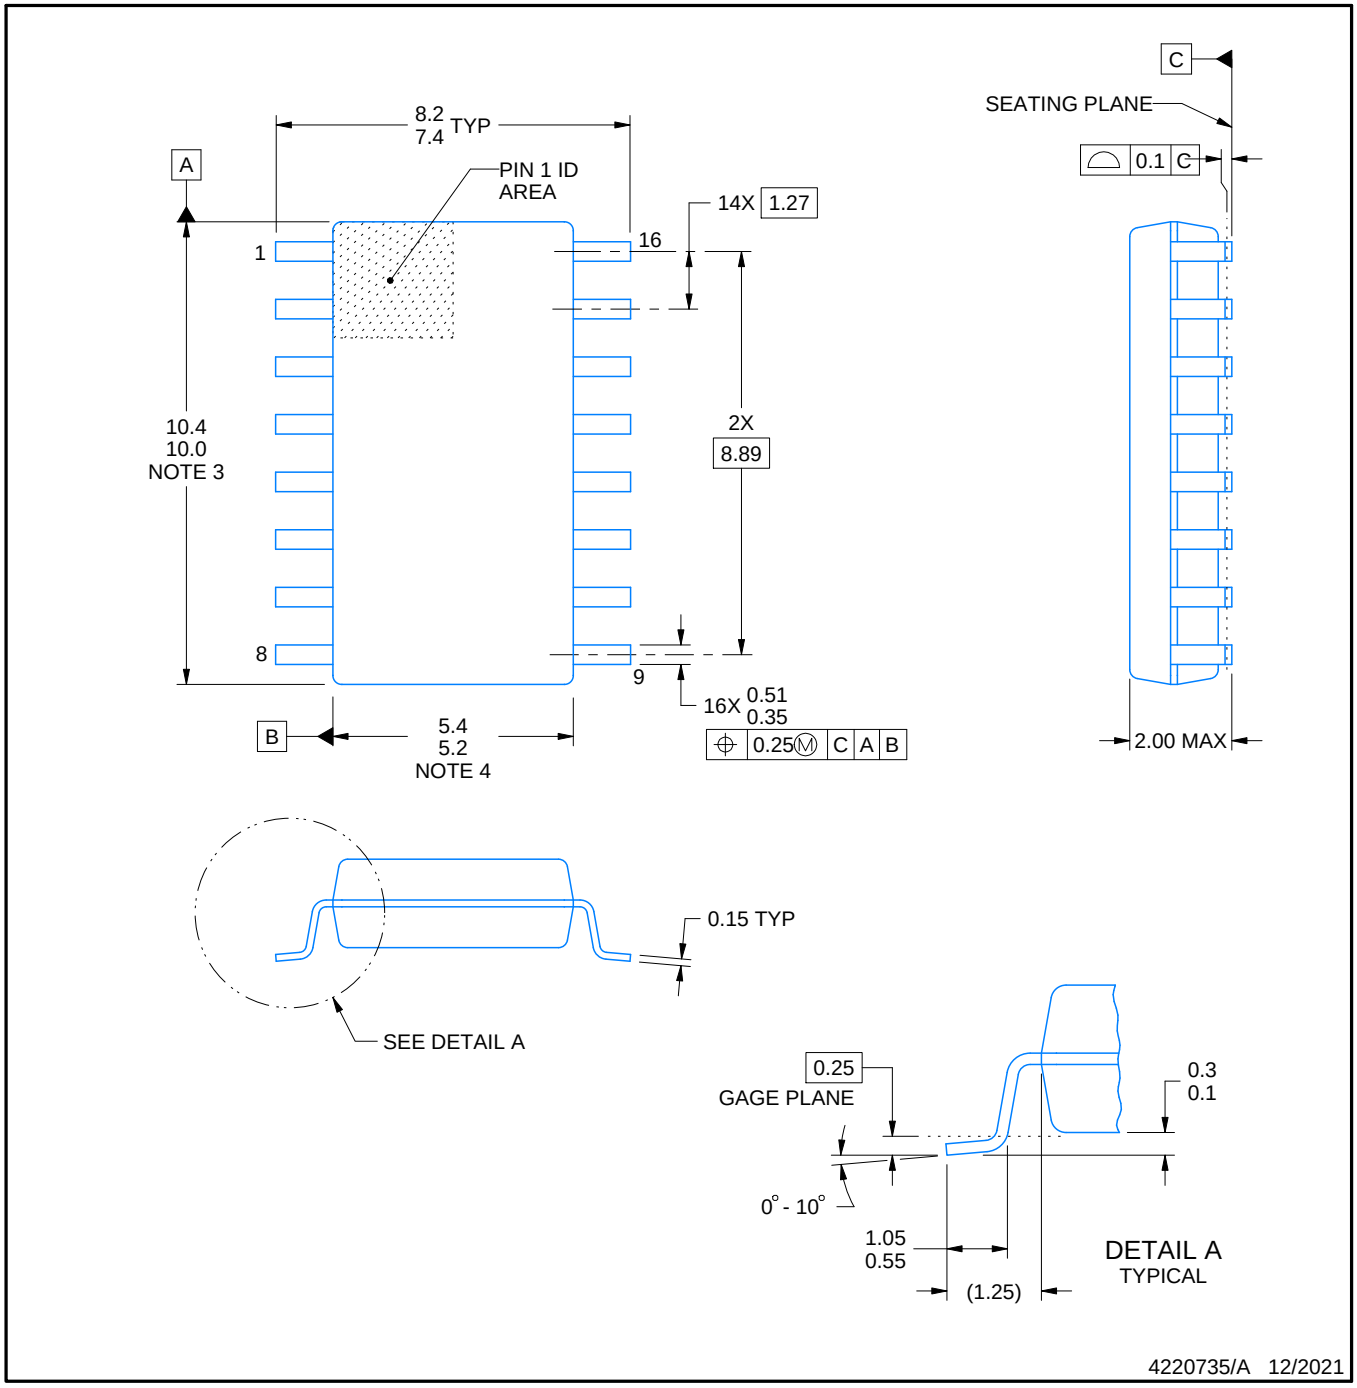


PACKAGE OUTLINE

NS0016A

SOP - 2.00 mm max height

SOP



NOTES:

1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm, per side.

NON SOLDER MASK
DEFINED

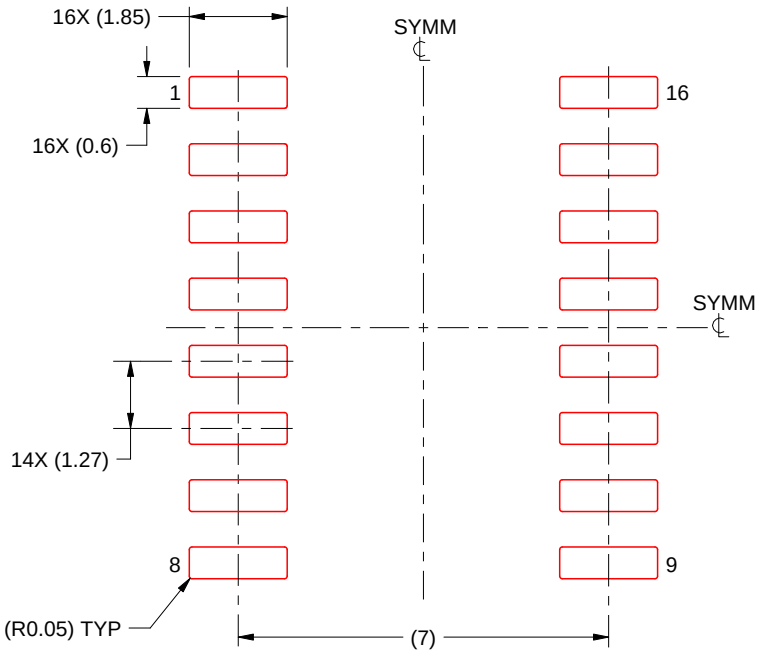
SOLDER MASK
DEFINED

SOLDER MASK DETAILS

4220735/A 12/2021

NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.
6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.



SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:7X

4220735/A 12/2021

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.
