

## LM2724A High Speed 3A Synchronous MOSFET Driver

Check for Samples: [LM2724A](#)

### FEATURES

- Shoot-Through Protection
- Input Under-Voltage-Lock-Out
- 3A Peak Driving Current
- 195 $\mu$ A Quiescent Current
- 28V Input Voltage in Buck Configuration
- SOIC-8 and WSON Packages

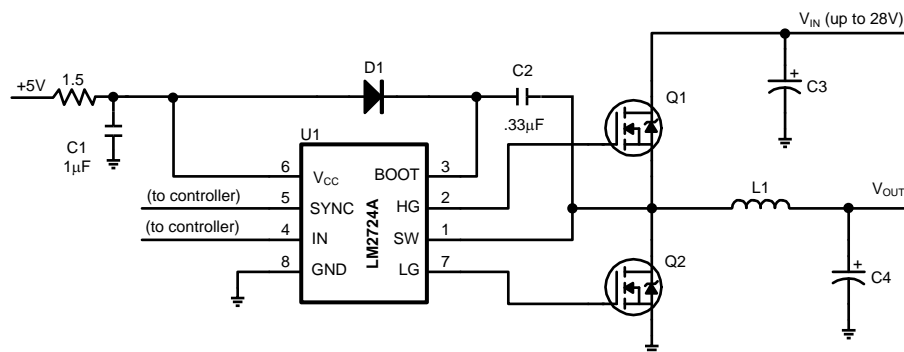

### APPLICATIONS

- High Current DC/DC Power Supplies
- High Input Voltage Switching Regulators
- Fast Transient Microprocessors
- Notebook Computers

### DESCRIPTION

The LM2724A is a dual N-channel MOSFET driver which can drive both the top and bottom MOSFETs in a push-pull structure simultaneously. The LM2724A takes a logic input and splits it into two complimentary signals with a typical 20ns dead time in between. The built-in cross-conduction protection circuitry prevents the top and bottom MOSFETs from turning on simultaneously. With a bias voltage of 5V, the peak sourcing and sinking current for each driver of the LM2724A is about 3A. Input UVLO (Under-Voltage-Lock-Out) ensures that all the driver outputs stay low until the supply rail exceeds the power-on threshold, or after the supply rail drops below power-on threshold by a specified hysteresis during system power down. The cross-conduction protection circuitry detects both driver outputs and will not turn on a driver until the other driver output is low. The top gate voltage needed by the top MOSFET is obtained through an external boot-strap structure. When not switching, the LM2724A only draws up to 195 $\mu$ A from the 5V rail. The synchronization operation of the bottom MOSFET can be disabled by pulling the SYNC pin to ground.

### TYPICAL APPLICATION

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

All trademarks are the property of their respective owners.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of the Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

**CONNECTION DIAGRAM**

**Figure 1. 8-Lead SOIC**  
See Package Number D

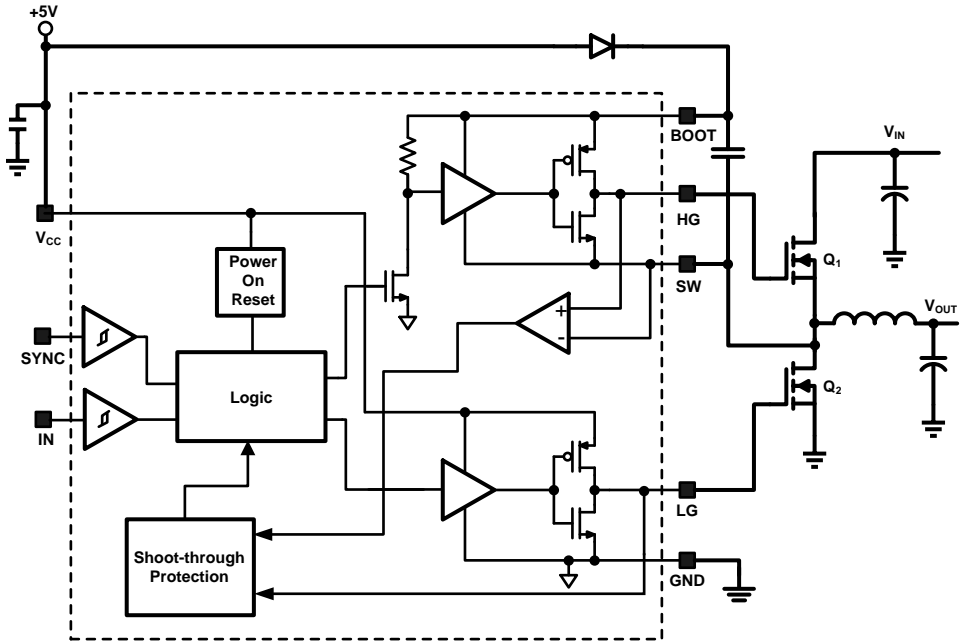

**Figure 2. 8-Lead WSON**  
See Package Number NGN

**PIN DESCRIPTIONS**

Pin	Name	Function
1	SW	Top driver return. Should be connected to the common node of top and bottom FETs
2	HG	Top gate drive output. Should be connected to the top FET gate.
3	BOOT	Bootstrap. Accepts a bootstrap voltage for powering the high-side driver
4	IN	Accepts a logic control signal
5	SYNC	Bottom gate enable
6	V <sub>CC</sub>	Connect to +5V supply
7	LG	Bottom gate drive output. Should be connected to the bottom FET gate.
8	GND	Ground

**BLOCK DIAGRAM**

**ABSOLUTE MAXIMUM RATINGS<sup>(1)(2)</sup>**

		VALUE / UNITS
$V_{CC}$		7V
BOOT to SW		7V
BOOT to GND <sup>(3)</sup>		35V
SW to GND <sup>(4)</sup>		-2V to 30V
Junction Temperature		+150°C
Power Dissipation <sup>(5)</sup>		720mW (SOIC-8) 3.2W (WSON-8)
Storage Temperature		-65°C to 150°C
ESD Susceptibility	Human Body Model <sup>(6)</sup>	2.0 kV
Soldering Time, Temperature		10sec., 300°C

- (1) **Absolute Maximum Ratings** are limits beyond which damage to the device may occur. **Operating ratings** are conditions under which the device operates correctly. The ensured specifications apply only for the listed test conditions. Some performance characteristics may degrade when the part is not operated under listed conditions.
- (2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/Distributors for availability and specifications.
- (3) If BOOT voltage exceeds this value, the ESD structure will degrade.
- (4) The SW pin can have -2V to -0.5V applied for a maximum duty cycle of 10% with a maximum period of 1 second. There is no duty cycle or maximum period limitation for a SW pin voltage range of -0.5V to 30V.
- (5) Maximum allowable power dissipation is a function of the maximum junction temperature,  $T_{JMAX}$ , the junction-to-ambient thermal resistance,  $\theta_{JA}$ , and the ambient temperature,  $T_A$ . The maximum allowable power dissipation at any ambient temperature is calculated using:  $P_{MAX} = (T_{JMAX} - T_A) / \theta_{JA}$ . The junction-to-ambient thermal resistance,  $\theta_{JA}$ , for LM2724A is 172°C/W. For a  $T_{JMAX}$  of 150°C and  $T_A$  of 25°C, the maximum allowable power dissipation is 0.7W. The  $\theta_{JA}$ , for LM2724A WSON package is 39°C/W. For a  $T_{JMAX}$  of 150°C and  $T_A$  of 25°C, the maximum allowable power dissipation is 3.2W.
- (6) ESD machine model susceptibility is 200V.

**RECOMMENDED OPERATING CONDITIONS<sup>(1)</sup>**

		VALUE / UNITS
$V_{CC}$		4.3V to 6.8V
Junction Temperature Range		-40°C to 125°C

- (1) **Absolute Maximum Ratings** are limits beyond which damage to the device may occur. **Operating ratings** are conditions under which the device operates correctly. The ensured specifications apply only for the listed test conditions. Some performance characteristics may degrade when the part is not operated under listed conditions.

## Electrical Characteristics — LM2724A

$V_{CC} = \text{BOOT} = \text{SYNC} = 5\text{V}$ ,  $\text{SW} = \text{GND} = 0\text{V}$ , unless otherwise specified. Typicals and limits appearing in plain type apply for  $T_A = T_J = +25^\circ\text{C}$ . Limits appearing in **boldface** type apply over the entire operating temperature range.

Symbol	Parameter	Condition	Min	Typ	Max	Units
<b>POWER SUPPLY</b>

$t_1$	Pull-down Delay	Timing Diagram		13		ns
<b>LOGIC</b>						
$V_{uvlo\_up}$	$V_{CC}$ Under-Voltage-Lock-Out Upper Threshold	$V_{CC}$ rises from 0V toward 5V			<b>4</b>	V
$V_{uvlo\_dn}$	$V_{CC}$ Under-Voltage-Lock-Out Lower Threshold	$V_{CC}$ falls from 5V toward 0V	<b>2.5</b>			V
$V_{uvlo\_hys}$	$V_{CC}$ Under-Voltage-Lock-Out Hysteresis	$V_{CC}$ falls from 5V toward 0V		0.8		V
$V_{IH\_SYNC}$	SYNC Pin High Input		<b>55%</b>			$V_{CC}$
$V_{IL\_SYNC}$	SYNC Pin Low Input				<b>25%</b>	
$I_{leak\_SYNC}$	SYNC Pin Leakage Current	SYNC = 5V, Sink Current			<b>2</b>	$\mu\text{A}$
		SYNC = 0V, Source Current			<b>10</b>	
$I_{leak\_IN}$	IN Pin Leakage Current	IN = 0V, Source Current			<b>2</b>	$\mu\text{A}$
		IN = 5V, Sink Current			<b>10</b>	
$t_{on\_min1}$	Minimum Positive Pulse Width at IN Pin <sup>(1)</sup>			160		ns
$t_{on\_min2}$	Minimum Positive Pulse Width at IN Pin for HG to Respond <sup>(2)</sup>			45		
$t_{on\_min3}$	Minimum Positive Pulse Width at IN Pin for LG to Respond <sup>(3)</sup>			10		
$t_{off\_min1}$	Minimum Negative Pulse Width at IN Pin for LG to Respond <sup>(4)</sup>			40		
$t_{off\_min2}$	Minimum Negative Pulse Width at IN Pin for HG to Respond <sup>(5)</sup>			5		
$V_{IH\_IN}$	IN High Level Input Voltage	When IN pin goes high from 0V	<b>55%</b>			$V_{CC}$
$V_{IL\_IN}$	IN Low Level Input Voltage	When IN pin goes low from 5V			<b>25%</b>	

- (1) If the positive pulse width at IN pin is below this value but above  $t_{on\_min2}$ , the pulse is internally stretched to  $t_{on\_min1}$ , so the HG width will be a constant value.
- (2) If the positive pulse width at IN pin is below this value but above  $t_{on\_min3}$ , then HG stops responding while LG still responds to the pulse.
- (3) If the positive pulse width at IN pin is below this value, the pulse will be completely ignored. Neither HG or LG will respond to it.
- (4) If the negative pulse width at IN pin is below this value but above  $t_{off\_min2}$ , then LG stops responding while HG still responds.
- (5) If the negative pulse width at IN pin is below this value, the pulse will be completely ignored. Neither HG or LG will respond to it.

LM2724AMX/NOPB.A	Active	Production	SOIC (D)   8	2500   LARGE T&R	Yes	SN	Level-1-260C-UNLIM	-40 to 125	2724 AM
LM2724AMX/NOPB.B	Active	Production	SOIC (D)   8	2500   LARGE T&R	Yes	SN	Level-1-260C-UNLIM	-40 to 125	2724 AM

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## TAPE AND REEL INFORMATION

## NOTES:

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.
