LMK1D1204P ピン制御 OE、低付加ジッタ LVDS バッファ

1 特長

- 2 入力、4 出力 (2:4) 高性能 LVDS クロック・バッファ・ファミリ
- 出力周波数：最大 2GHz
- 個別の出力イネーブル / ディセーブル用ハードウェア・ピン
- 電源電圧：1.8V / 2.5V / 3.3V ±5%
- 小さい付加ジッタ：156.25MHz 時、12kHz～20MHz の範囲で最大 60fs rms
  - 非常に小さい位相ノイズ・フロア：-164dBc/Hz (標準値)
- 非常に小さい伝搬遅延：575ps (最大値)
- 出力スキュー：20ps (最大値)
- フェイルセーフ入力
- ユニバーサル入力は LVDS、LVPECL、LVCMOS、HCSL、CML の信号レベルに対応
- LVDS リファレンス電圧 V_{AC_REF} は、容量性結合入力に使用可能
- 産業用温度範囲：-40℃～105℃
- パッケージ：
  - 5mm × 5mm、28 ピン VQFN (RHD)

2 アプリケーション

- テレコミュニケーションおよびネットワーク機器
- 医療用画像処理
- 試験 / 測定機器
- ワイヤレス・インフラ
- 業務用オーディオ、ビデオ、サイネージ

3 概要

LMK1D1204P クロック・バッファは、2 つのクロック入力 (IN0 および IN1) のいずれか 1 つを 4 ペアの差動 LVDS クロック出力 (OUT0～OUT3) に分配します。このとき、クロック分配のスキューを最小限に抑えます。入力は LVDS、LVPECL、LVCMOS、HCSL、CML のいずれかに対応可能です。

LMK1D1204P は、50Ω 伝送経路の駆動に特化して設計されています。シングルエンド・モードで入力を駆動する場合は、未使用の負入力ピンに適切なバイアス電圧を印加する必要があります (図 9-6 参照)。IN_SEL ピンは、どの入力を出力に転送するかを選択します。このデバイスは、フェイルセーフ入力機能をサポートしています。さらに、このデバイスは入力ヒステリシスを備えており、入力信号が存在しないときに出力がランダムに発振することを防止します。

各 LVDS 差動出力は、対応する OEx ピンをロジック HIGH「1」に設定するとイネーブルになります。このピンがロジック LOW「0」に設定されている場合、出力がディセーブルされて HIGH Z 状態になり、消費電力の低減につながります。

このデバイスは、1.8V、2.5V または 3.3V 電源で動作し、-40℃～105℃ (周囲温度) で動作が規定されています。

パッケージ情報

部品番号	パッケージ(1)	パッケージ・サイズ (公称) (2)
LMK1D1204P	VQFN (28)	5.00mm × 5.00mm

(1) 利用可能なすべてのパッケージについては、データシートの末尾にある注文情報を参照してください。
(2) パッケージ・サイズ (長さ × 幅) は公称値であり、該当する場合はピンも含まれます。

6 Pin Configuration and Functions

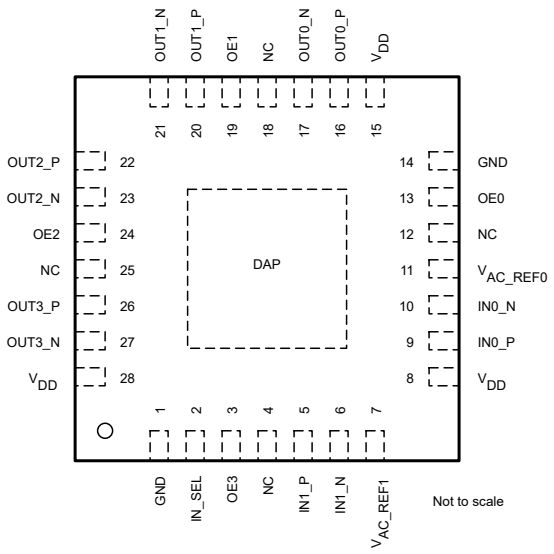

図 6-1. LMK1D1204P: RHD Package 28-Pin VQFN Top View

表 6-1. Pin Functions

NAME	NO.	TYPE(1)	DESCRIPTION
DIFFERENTIAL/SINGLE-ENDED CLOCK INPUT			
IN0_P	9	I	Primary: Differential input pair or single-ended input
IN0_N	10		
IN1_P	5	I	Secondary: Differential input pair or single-ended input. Note that INP0, INN0 are used indistinguishably with IN0_P, IN0_N.
IN1_N	6		
INPUT SELECT			
IN_SEL	2	I	Input Selection with an internal 500-kΩ pullup and 320-kΩ pulldown, selects input port. See 表 9-1.
OUTPUT ENABLE			
OE0	13	I	Output Enable for channel 0 HIGH (default): Enable output channel 0 LOW: Disable output channel 0 in Hi-Z state
OE1	19	I	Output Enable for channel 1 HIGH (default): Enable output channel 1 LOW: Disable output channel 1 in Hi-Z state
OE2	24	I	Output Enable for channel 2 HIGH (default): Enable output channel 2 LOW: Disable output channel 2 in Hi-Z state
OE3	3	I	Output Enable for channel 3 HIGH (default): Enable output channel 3 LOW: Disable output channel 3 in Hi-Z state
BIAS VOLTAGE OUTPUT			
V_{AC_REF0}	11	O	Bias voltage output for capacitive-coupled inputs. If used, TI recommends using a 0.1-µF capacitor to GND on this pin.
V_{AC_REF1}	7		
DIFFERENTIAL CLOCK OUTPUT			
OUT0_P	16	O	Differential LVDS output pair number 0
OUT0_N	17		

表 6-1. Pin Functions (continued)

NAME	NO.	TYPE(1)	DESCRIPTION
OUT1_P	20	O	Differential LVDS output pair number 1
OUT1_N	21		
OUT2_P	22	O	Differential LVDS output pair number 2
OUT2_N	23		
OUT3_P	26	O	Differential LVDS output pair number 3
OUT3_N	27		
SUPPLY VOLTAGE			
V_{DD}	8, 15, 28	P	Device power supply (1.8 V, 2.5 V, or 3.3 V)
GROUND			
GND	1, 14	G	Ground
MISC			
DAP	DAP	GND	Die Attach Pad. Connect to the printed circuit board (PCB) ground plane for heat dissipation.
NC	4, 12, 18, 25	NC	No Connection. Leave floating

(1) G = Ground, I = Input, O = Output, P = Power

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

		MIN	MAX	UNIT
V_{DD}	Supply voltage	–0.3	3.6	V
V_{IN}	Input voltage	–0.3	3.6	V
V_O	Output voltage	–0.3	V_{DD} + 0.3	V
I_{IN}	Input current	–20	20	mA
I_O	Continuous output current	–50	50	mA
T_J	Junction temperature		135	°C
T_{stg}	Storage temperature (2)	–65	150	°C

(1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
(2) Device unpowered

7.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins(1)	±3000	V
		Charged device model (CDM), per ANSI/ESDA/JEDEC JS-002, all pins(2)	±1000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
V_{DD}	Core supply voltage	3.3-V supply	3.135	3.3	3.465	V
		2.5-V supply	2.375	2.5	2.625	
		1.8-V supply	1.71	1.8	1.89	
Supply Ramp	Supply voltage ramp	Requires monotonic ramp (10-90% of V_{DD})	0.1		20	ms
T_A	Operating free-air temperature		–40		105	°C
T_J	Operating junction temperature		–40		135	°C

7.4 Thermal Information

THERMAL METRIC(1)		LMK1D1204P RHD (VQFN) 28 PINS	UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	38.9	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	32.1	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	18.7	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	1	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	18.7	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	8.2	°C/W

(1) For more information about traditional and new thermal metrics, see the Semiconductor and IC Package Thermal Metrics application report.

7.5 Electrical Characteristics

V_{DD} = 1.8 V ± 5 %, –40°C ≤ T_A ≤ 105°C. Typical values are at V_{DD} = 1.8 V, 25°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT

V_{DD} = 1.8 V ± 5 %, –40°C ≤ T_A ≤ 105°C. Typical values are at V_{DD} = 1.8 V, 25°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
I_{IL}	Input low current	V_{DD} = 3.465 V, V_{INP} = 0 V, V_{INN} = 1.2 V	–30			µA
C_{IN_S-E}	Input capacitance (Single-ended)	at 25°C		3.5		pF
LVDS DC OUTPUT CHARACTERISTICS						
|VOD|	Differential output voltage magnitude | V_{OUTP} - V_{OUTN}|	$V_{IN,DIFF(P-P)}$ = 0.3 V, R_{LOAD} = 100 Ω	250	350	450	mV
ΔVOD	Change in differential output voltage magnitude. Per output, defined as the difference between VOD in logic hi/lo states.	$V_{IN,DIFF(P-P)}$ = 0.3 V, R_{LOAD} = 100 Ω	–15		15	mV
$V_{OC(SS)}$	Steady-state common mode output voltage	$V_{IN,DIFF(P-P)}$ = 0.3 V, R_{LOAD} = 100 Ω (V_{DD} = 1.8 V)	1		1.2	V
		$V_{IN,DIFF(P-P)}$ = 0.3 V, R_{LOAD} = 100 Ω (V_{DD} = 2.5 V/3.3 V)	1.1		1.375	
$\Delta_{VOC(SS)}$	Change in steady-state common mode output voltage. Per output, defined as the difference in VOC in logic hi/lo states.	$V_{IN,DIFF(P-P)}$ = 0.3 V, R_{LOAD} = 100 Ω	–15		15	mV
LVDS AC OUTPUT CHARACTERISTICS						
V_{ring}	Output overshoot and undershoot	$V_{IN,DIFF(P-P)}$ = 0.3 V, R_{LOAD} = 100 Ω, f_{OUT} = 491.52 MHz	–0.1		0.1	V_{OD}
V_{OS}	Output AC common mode	$V_{IN,DIFF(P-P)}$ = 0.3 V, R_{LOAD} = 100 Ω		50	100	mV_{pp}
I_{OS}	Short-circuit output current (differential)	V_{OUTP} = V_{OUTN}	–12		12	mA
$I_{OS(cm)}$	Short-circuit output current (common-mode)	V_{OUTP} = V_{OUTN} = 0	–24		24	mA
t_{PD}	Propagation delay	$V_{IN,DIFF(P-P)}$ = 0.3 V, R_{LOAD} = 100 Ω (2)	0.3		0.575	ns
$t_{SK, O}$	Output skew	Skew between outputs with the same load conditions			20	ps
$t_{SK, PP}$	Part-to-part skew	Skew between outputs on different parts subjected to the same operating conditions with the same input and output loading.			250	ps
$t_{SK, P}$	Pulse skew	50% duty cycle input, crossing point-to-crossing-point distortion (4)	–20		20	ps
$t_{RJIT(ADD)}$	Random additive Jitter (rms)	f_{IN} = 156.25 MHz with 50% duty-cycle, Input slew rate = 1.5V/ns, Integration range = 12 kHz – 20 MHz, with output load R_{LOAD} = 100 Ω		50	60	fs, RMS
Phase noise	Phase Noise for a carrier frequency of 156.25 MHz with 50% duty-cycle, Input slew rate = 1.5V/ns with output load R_{LOAD} = 100 Ω	PN_{1kHz}		–143		dBc/Hz
		PN_{10kHz}		–152		
		PN_{100kHz}		–157		
		PN_{1MHz}		–160		
		PN_{floor}		–164		
MUX_{ISO}	Mux Isolation	f_{IN} = 156.25 MHz. The difference in power level at f_{IN} when the selected clock is active and the unselected clock is static versus when the selected clock is inactive and the unselected clock is active.		80		dB
ODC	Output duty cycle	With 50% duty cycle input	45		55	%

V_{DD} = 1.8 V ± 5 %, –40°C ≤ T_A ≤ 105°C. Typical values are at V_{DD} = 1.8 V, 25°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_R/t_F	Output rise and fall time	20% to 80% with R_{LOAD} = 100 Ω			300	ps
V_{AC_REF}	Reference output voltage	VDD = 2.5 V, I_{LOAD} = 100 µA	0.9	1.25	1.375	V
POWER SUPPLY NOISE REJECTION (PSNR) V_{DD} = 2.5 V/ 3.3 V						
PSNR	Power Supply Noise Rejection ($f_{carrier}$ = 156.25 MHz)	10 kHz, 100 mVpp ripple injected on V_{DD}		–70		dBc
		1 MHz, 100 mVpp ripple injected on V_{DD}		–50		

(1) A typical 4-mA current reduction per disabled output can be expected.
(2) Measured between single-ended/differential input crossing point to the differential output crossing point.
(3) Defined as the magnitude of the time difference between the high-to-low and low-to-high propagation delay times at an output.

7.6 Typical Characteristics

図 7-1 captures the variation of the LMK1D1204P current consumption with input frequency and supply voltage. 図 7-2 shows the variation of the differential output voltage (VOD) swept across frequency.

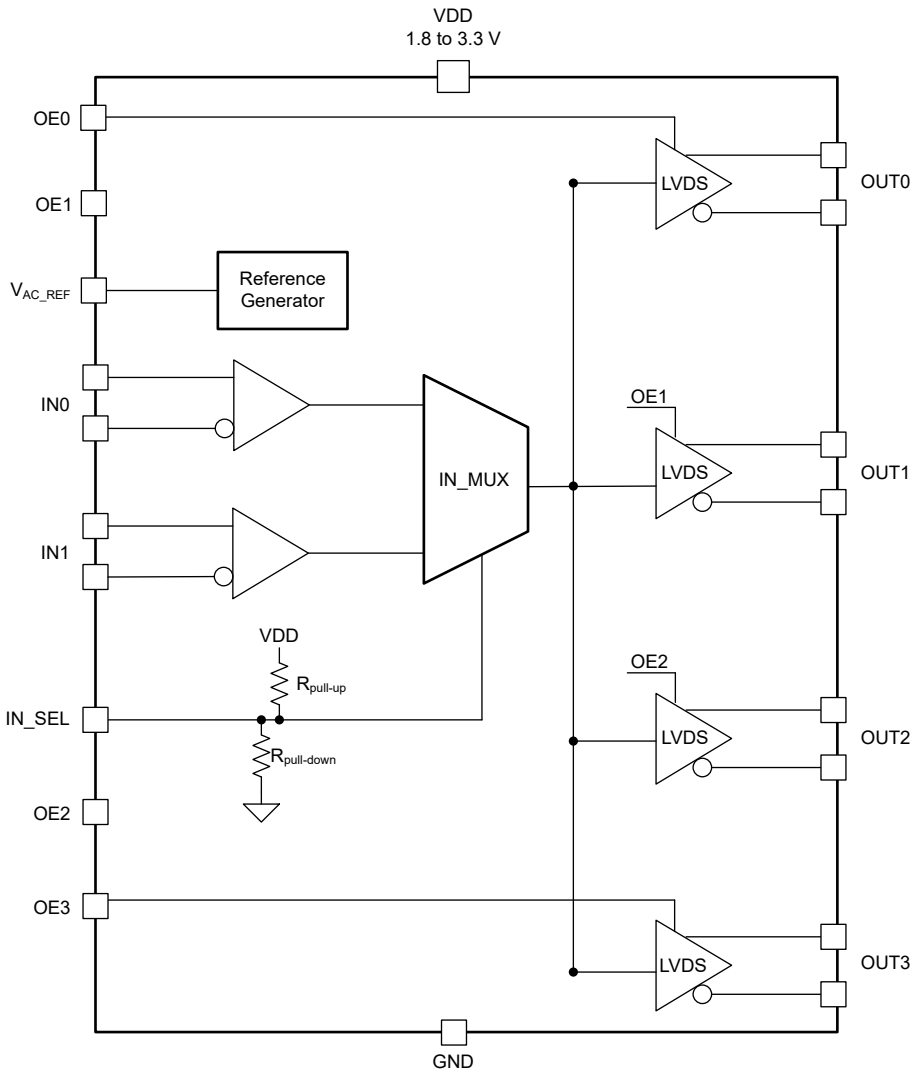
9 Detailed Description

9.1 Overview

The LMK1D1204P LVDS drivers use CMOS transistors to control the output current. Therefore, proper biasing and termination are required to ensure correct operation of the device and to maximize signal integrity.

The proper LVDS termination for signal integrity over two 50-Ω lines is 100 Ω between the outputs on the receiver end. Either DC-coupled termination or AC-coupled termination can be used for LVDS outputs. TI recommends placing a termination resistor close to the receiver. If the receiver is internally biased to a voltage different than the output common-mode voltage of the LMK1D1204P, AC coupling must be used. If the LVDS receiver has internal 100-Ω termination, external termination must be omitted.

9.2 Functional Block Diagram



9.3 Feature Description

The LMK1D1204P is a low additive jitter LVDS fan-out buffer that can generate up to four copies of two selectable LVPECL, LVDS, HCSL, CML, or LVCMOS inputs. The LMK1D1204P can accept reference clock frequencies up to 2 GHz while providing low output skew.

9.3.1 Fail-Safe Input

The LMK1D120x family of devices is designed to support fail-safe input operation feature. This feature allows the user to drive the device inputs before V_{DD} is applied without damaging the device. Refer to *Specifications* for more information on the maximum input supported by the device. The user should note that incorporating the fail-safe inputs also results in a slight increase in clock input pin capacitance. The device also incorporates an input hysteresis which prevents random oscillation in absence of an input signal. Furthermore, this feature allows the input pins to be left open.

9.4 Device Functional Modes

The two inputs of the LMK1D1204P are internally muxed together and can be selected through the control pin (see 表 9-1). Unused inputs can be left floating to reduce overall component cost. Both AC- and DC-coupling schemes can be used with the LMK1D1204P to provide greater system flexibility.

表 9-1. Input Selection Table

IN_SEL	ACTIVE CLOCK INPUT
0	IN0_P, IN0_N
1	IN1_P, IN1_N
Open	None (1)

(1) The input buffers are disabled and the state of the outputs are dependent on the state of OEx (see 表 9-2). If OEx = 0, the corresponding output will be disabled in Hi-Z state, whereas if OEx = 1 (default), the corresponding output will be logic low.

The outputs of the LMK1D1204P can be individually enabled or disabled using the OEx hardware pins (see 表 9-2). The disabled state of the outputs is Hi-Z (high impedance) as this reduces the power consumption and also prevents back-biasing of the devices connected to these outputs.

Unused outputs should be disabled to eliminate the need for a termination resistor. In the case of enabled unused outputs, TI recommends a 100-Ω termination for optimal performance.

表 9-2. Output Control

OEx	CLOCK OUTPUTS
0	OUTPx, OUTNx disabled in Hi-Z state
1 (default)	OUTPx, OUTNx enabled

9.4.1 LVDS Output Termination

TI recommends that unused outputs are terminated differentially with a 100-Ω resistor for optimum performance, although unterminated outputs are also okay but will result in slight degradation in performance (Output AC common-mode V_{OS}) in the outputs being used.

The LMK1D1204P can be connected to LVDS receiver inputs with DC and AC coupling as shown in 図 9-1 and 図 9-2, respectively.

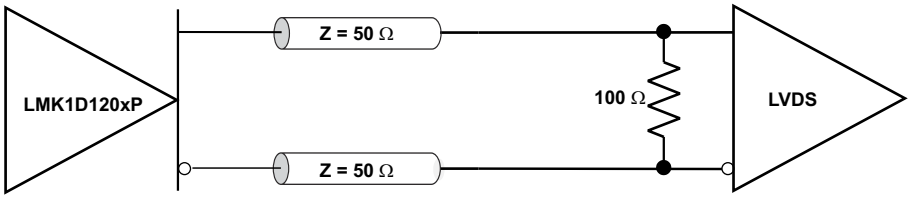


図 9-1. Output DC Termination

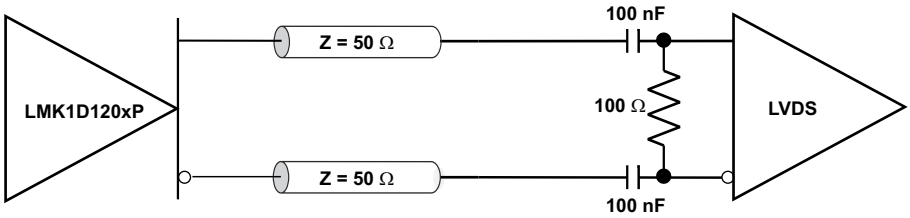

図 9-2. Output AC Termination (With the Receiver Internally Biased)

9.4.2 Input Termination

The LMK1D1204P inputs can be interfaced with LVDS, LVPECL, HCSL, or LVCMOS drivers.

LVDS drivers can be connected to LMK1D1204P inputs with DC and AC coupling as shown 図 9-3 and 図 9-4, respectively.

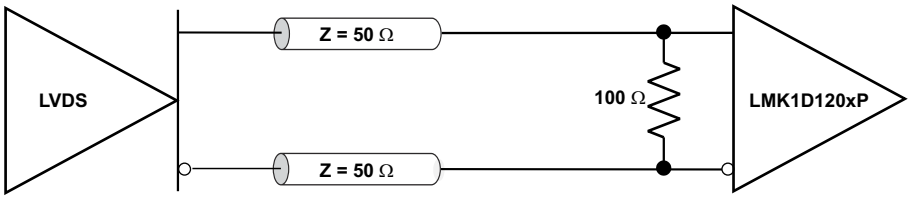

図 9-3. LVDS Clock Driver Connected to LMK1D1204P Input (DC-Coupled)

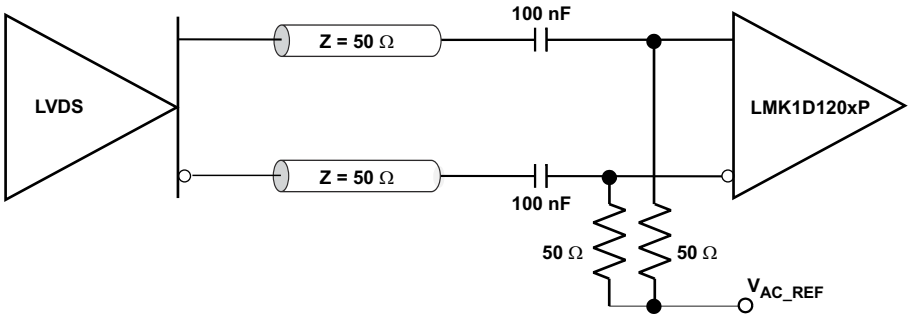

図 9-4. LVDS Clock Driver Connected to LMK1D1204P Input (AC-Coupled)

図 9-5 shows how to connect LVPECL inputs to the LMK1D1204P. The series resistors are required to reduce the LVPECL signal swing if the signal swing is >1.6 V_{PP}.

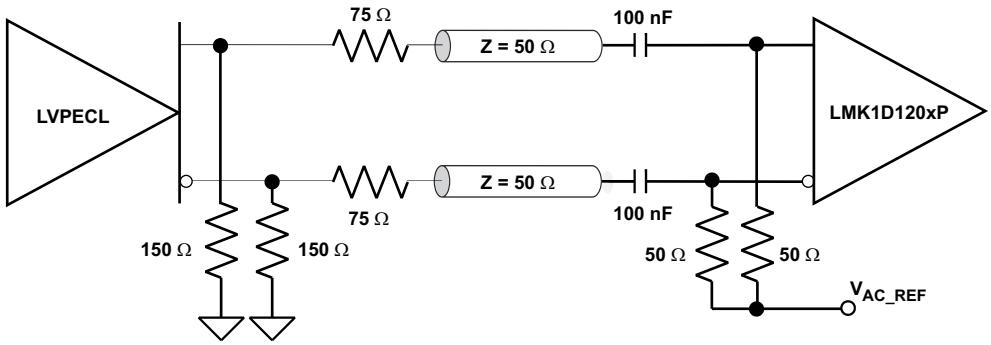

図 9-5. LVPECL Clock Driver Connected to LMK1D1204P Input

図 9-6 shows how to couple a LVCMOS clock input to the LMK1D1204P directly.

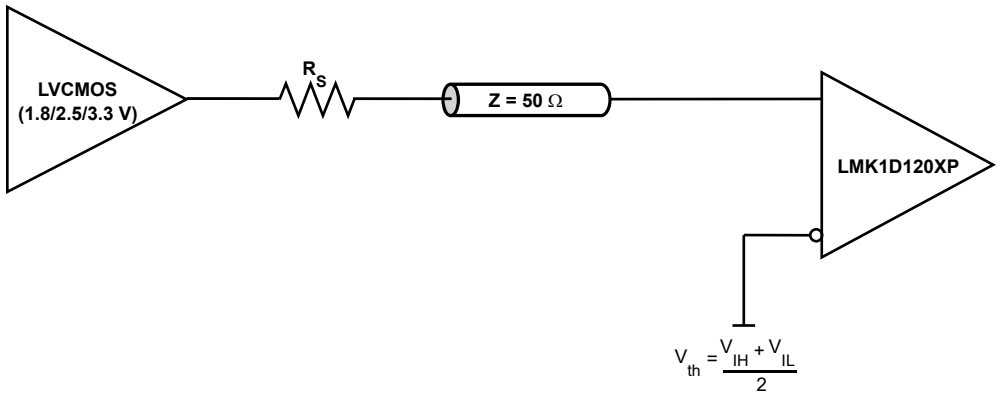

図 9-6. 1.8-V, 2.5-V, or 3.3-V LVCMOS Clock Driver Connected to LMK1D1204P Input

For unused input, TI recommends grounding both input pins (INP, INN) using 1-kΩ resistors.

10 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

10.1 Application Information

The LMK1D1204P is a low additive jitter universal to LVDS fan-out buffer with two selectable inputs and pin controlled output enables. The small package size, low output skew, low propagation delay and low additive jitter of this device is designed for applications that require high-performance clock distribution as well as for low-power and space-constraint applications.

10.2 Typical Application

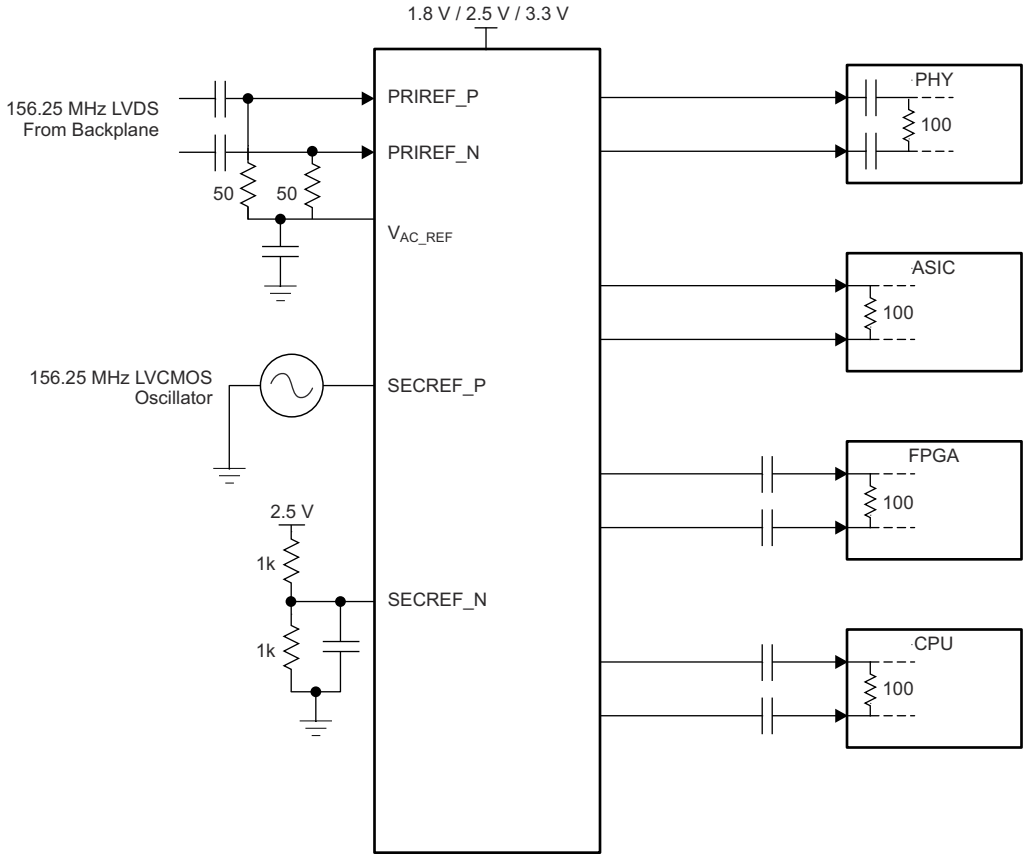

図 10-1. Fan-Out Buffer for Line Card Application

10.2.1 Design Requirements

The LMK1D1204P shown in 図 10-1 is configured to select two inputs: a 156.25-MHz LVDS clock from the backplane, or a secondary 156.25-MHz, LVCMOS, 2.5-V oscillator. The LVDS clock is AC-coupled and biased using the integrated reference voltage generator. A resistor divider is used to set the threshold voltage correctly for the LVCMOS clock. 0.1-µF capacitors are used to reduce noise on both V_{AC_REF} and SECREF_N. Either input signal can be then fanned out to desired devices, as shown. The configuration example is driving 4 LVDS receivers in a line card application with the following properties:

- The PHY device is capable of DC coupling with an LVDS driver such as the LMK1D1204P. This PHY device features internal termination so no additional components are required for proper operation.
- The ASIC LVDS receiver features internal termination and operates at the same common-mode voltage as the LMK1D1204P. Again, no additional components are required.
- The FPGA requires external AC coupling, but has internal termination. 0.1-µF capacitors are placed to provide AC coupling. Similarly, the CPU is internally terminated, and requires only external AC-coupling capacitors.
- The unused outputs of the LMK1D1204P can be disabled using the corresponding OEx pin. This results in a lower power consumption.

10.2.2 Detailed Design Procedure

See *Input Termination* for proper input terminations, dependent on single-ended or differential inputs.

See *LVDS Output Termination* for output termination schemes depending on the receiver application.

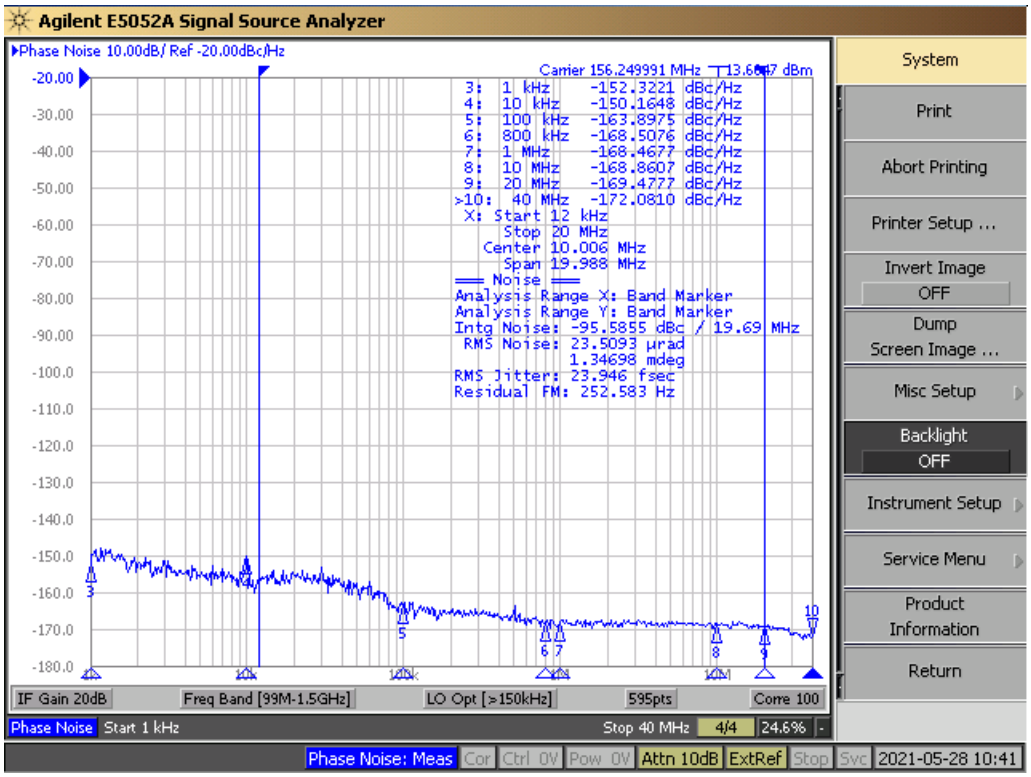
Unused outputs can be disabled using the corresponding OEx pin setting according to 表 9-2. Disabling the outputs also eliminates requirement of termination resistors.

In this example, the PHY, ASIC, FPGA and CPU require different schemes. Power supply filtering and bypassing is critical for low-noise applications.

See *Power Supply Recommendations* for recommended filtering techniques. A reference layout is provided in *Low-Additive Jitter, Four LVDS Outputs Clock Buffer Evaluation Board* user's guide (SCAU043).

10.2.3 Application Curves

This section shows the low additive noise for the LMK1D1204P. The low noise 156.25-MHz source with 24-fs RMS jitter shown in 図 10-2 drives the LMK1D1204P, resulting in 46.4-fs RMS when integrated from 12 kHz to 20 MHz (see 図 10-3). The resultant additive jitter is 39.7-fs RMS for this configuration.



Note: Reference signal is a low-noise Rhode and Schwarz SMA100B

図 10-2. LMK1D1204P Reference Phase Noise, 156.25 MHz, 24-fs RMS (12 kHz to 20 MHz)

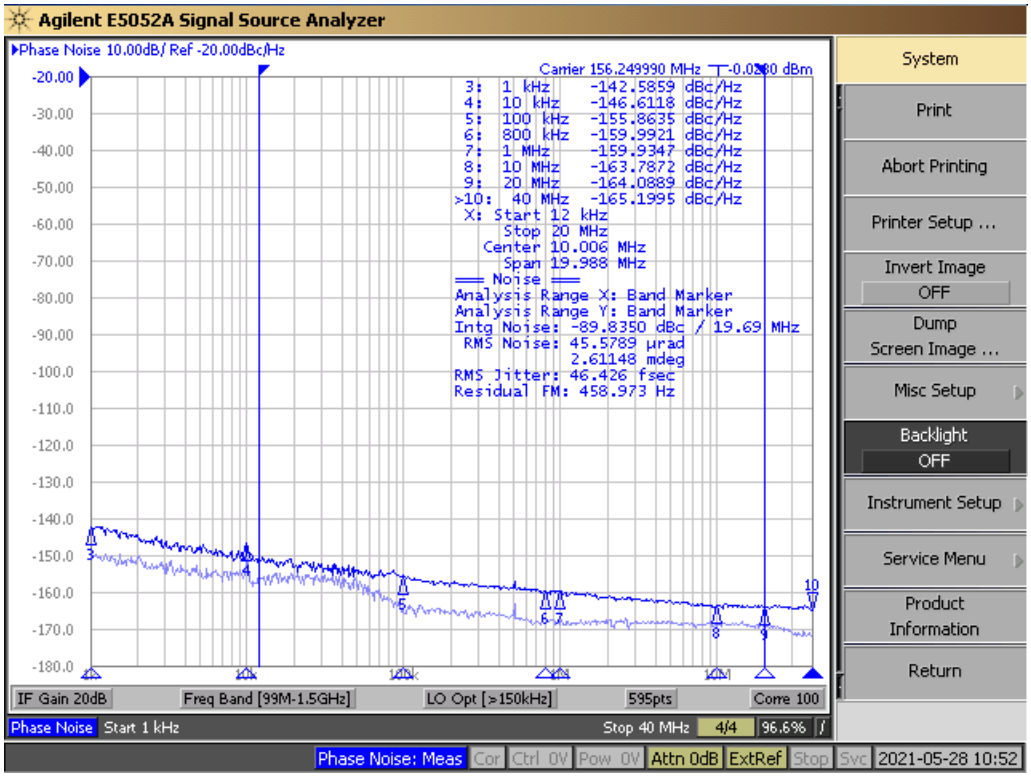


図 10-3. LMK1D1204P Output Phase Noise, 156.25 MHz, 46.4-fs RMS (12 kHz to 20 MHz)

10.3 Power Supply Recommendations

High-performance clock buffers are sensitive to noise on the power supply, which can dramatically increase the additive jitter of the buffer. Thus, it is essential to reduce noise from the system power supply, especially when jitter or phase noise is critical to applications.

Filter capacitors are used to eliminate the low-frequency noise from the power supply, where the bypass capacitors provide the low impedance path for high-frequency noise and guard the power-supply system against the induced fluctuations. These bypass capacitors also provide instantaneous current surges as required by the device and must have low equivalent series resistance (ESR). To properly use the bypass capacitors, they must be placed close to the power-supply pins and laid out with short loops to minimize inductance. TI recommends adding as many high-frequency (for example, 0.1-µF) bypass capacitors as there are supply pins in the package. TI recommends, but does not require, inserting a ferrite bead between the board power supply and the chip power supply that isolates the high-frequency switching noises generated by the clock driver. These ferrite beads prevent the switching noise from leaking into the board supply. Choose an appropriate ferrite bead with low DC resistance because it is imperative to provide adequate isolation between the board supply and the chip supply, as well as to maintain a voltage at the supply pins that is greater than the minimum voltage required for proper operation.

図 10-4 shows this recommended power-supply decoupling method.

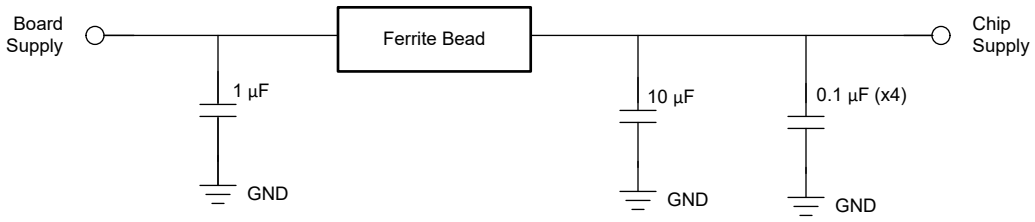

図 10-4. Power Supply Decoupling

10.4 Layout

10.4.1 Layout Guidelines

For reliability and performance reasons, the die temperature must be limited to a maximum of 135°C.

The device package has an exposed pad that provides the primary heat removal path to the PCB. To maximize the heat dissipation from the package, a thermal landing pattern including multiple vias to a ground plane must be incorporated into the PCB within the footprint of the package. The thermal pad must be soldered down to ensure adequate heat conduction to of the package. 図 10-5 and 図 10-6 show the recommended land and via patterns for the 28-pin LMK1D1204P device.

11.4 静電気放電に関する注意事項

この IC は、ESD によって破損する可能性があります。テキサス・インスツルメンツは、IC を取り扱う際には常に適切な注意を払うことを推奨します。正しい取り扱いおよび設置手順に従わない場合、デバイスを破損するおそれがあります。

ESD による破損は、わずかな性能低下からデバイスの完全な故障まで多岐にわたります。精密な IC の場合、パラメータがわずかに変化するだけで公表されている仕様から外れる可能性があるため、破損が発生しやすくなっています。

テキサス・インスツルメンツ用語集　　この用語集には、用語や略語の一覧および定義が記載されています。

12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package | Pins	Package qty | Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
LMK1D1204PRHDR	Active	Production	VQFN (RHD) | 28	3000 | LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 105	LMK1D 1204P
LMK1D1204PRHDR.B	Active	Production	VQFN (RHD) | 28	3000 | LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 105	LMK1D 1204P
LMK1D1204PRHDT	Active	Production	VQFN (RHD) | 28	250 | SMALL T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 105	LMK1D 1204P
LMK1D1204PRHDT.B	Active	Production	VQFN (RHD) | 28	250 | SMALL T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 105	LMK1D 1204P

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

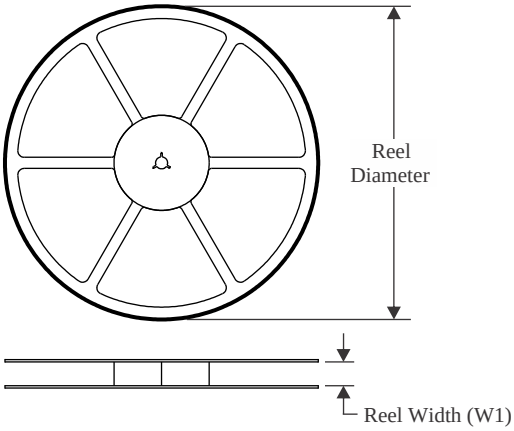
(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

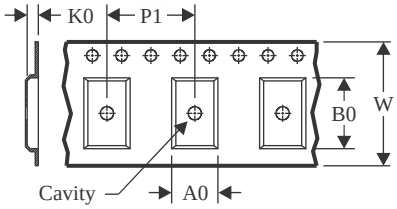
Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

TAPE AND REEL INFORMATION

REEL DIMENSIONS

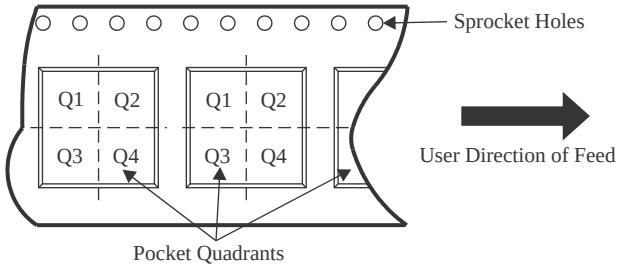


TAPE DIMENSIONS



A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE



*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
