

## SNx5HVD308xE 低消費電力 RS-485 トランシーバ

### 1 特長

- TIA/EIA-485A 規格の要件を満たすか、それを上回る性能
- 低静止電力
  - アクティブ・モードで 0.3mA
  - 1nA シャットダウン・モード
- 1/8 の単位負荷で、バス上に最大 256 のノード
- バス・ピンの ESD 保護: 最大 15kV
- 業界標準の SN75176 フットプリント
- フェイルセーフ・レシーバ (バス・オープン、バス短絡、バス・アイドル)
- グリッチの発生しないパワーアップ / パワーダウン・バス入出力

### 2 アプリケーション

- エネルギー・メータ・ネットワーク
- モーター制御
- 電力インバータ
- 産業用オートメーション
- ビル・オートメーション・ネットワーク
- バッテリー駆動アプリケーション
- 通信機器

### 3 概要

SNx5HVD308xE は、RS-485 データ・バス・ネットワーク用に設計された半二重トランシーバです。5V 電源で動作し、TIA/EIA-485A 規格に完全準拠しています。これらのデバイスは遷移時間を制御できるため、長いツイストペア・ケーブルでデータを伝送するのに適しています。SN65HVD3082E および SN75HVD3082E は、最大 200kbps の信号速度に最適化されています。SN65HVD3085E は最大 1Mbps のデータ転送に適しており、SN65HVD3088E は最大 20Mbps の信号速度を必要とするアプリケーションに適しています。

これらのデバイスは非常に小さい電源電流 (0.3mA (標準値)、負荷を除く) で動作するように設計されています。これらのデバイスは非アクティブ・シャットダウン・モードに入ると消費電流が数ナノアンペアに低下するため、消費電力の制約が厳しいアプリケーションに理想的です。

これらのデバイスは同相範囲が広く ESD 保護レベルが高いため、エネルギー・メータ・ネットワーク、電気インバータ、テレコム・ラックのステータスおよびコマンド信号、ケーブル接続シャーシ・インターコネクタ、ノイズ耐性が重要な産業用オートメーション・ネットワークなど、要求の厳しいアプリケーションに適しています。これらのデバイスのフットプリントは、SN75176 デバイスの業界標準のフットプリントと一致しています。パワー・オン・リセット回路は、電源電圧が安定するまで出力を高インピーダンス状態に維持します。サーマル・シャットダウン機能は、システムのフォルト状態による損傷からデバイスを保護します。SN75HVD3082E は 0°C ~ 70°C、SN65HVD308xE は -40°C ~ 85°C の周囲温度での動作が規定されています。SN65HVD3082E の D パッケージ・バージョンは -40°C ~ 105°C の周囲温度での動作が規定されています。

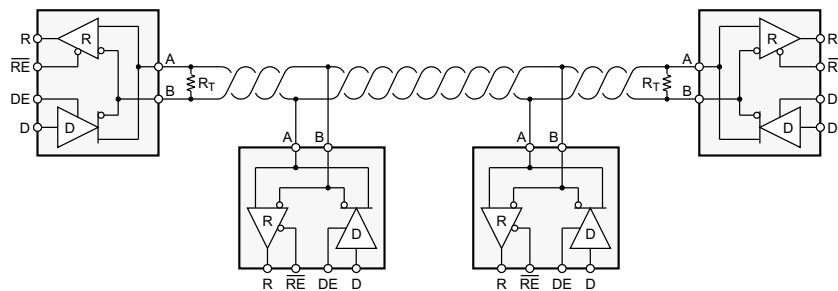

#### パッケージ情報

部品番号	パッケージ <sup>(1)</sup>	パッケージ・サイズ <sup>(2)</sup>
SN65HVD3082E	SOIC (D, 8)	4.9mm × 6mm
	VSSOP (DGK, 8)	3mm × 4.9mm
	PDIP (P, 8)	9.81mm × 9.43mm
SN65HVD3088E	SOIC (D, 8)	4.9mm × 6mm
	VSSOP (DGK, 8)	3mm × 4.9mm
	PDIP (P, 8)	9.81mm × 9.43mm
	SO (NS, 14)	10.2mm × 7.8mm
SN75HVD3082E	SOIC (D, 8)	4.9mm × 6mm
SN65HVD3085E	VSSOP (DGK, 8)	3mm × 4.9mm

(1) 利用可能なすべてのパッケージについては、データシートの末尾にある注文情報を参照してください。

- (2) パッケージ・サイズ (長さ×幅) は公称値であり、該当する場合はピンも含まれます。

## 4 Revision History

資料番号末尾の英字は改訂を表しています。その改訂履歴は英語版に準じています。

<b>Changes from Revision N (June 2023) to Revision O (July 2023)</b> .....	<b>Page</b>
• Changed pins 11 and 12 to NC in the NS Package <a href="#">図 5-2</a> and <a href="#">表 5-2</a> .....	5
<b>Changes from Revision M (February 2022) to Revision N (June 2023)</b> .....	<b>Page</b>
• 「製品情報」表を「パッケージ情報」表に変更 NS パッケージを追加.....	1
• Added the SN65HVD3088E NS package.....	5
• Added the NS package values to the <a href="#">Thermal Information, SN65HVD308xE</a> table.....	8
<b>Changes from Revision L (November 2021) to Revision M (February 2022)</b> .....	<b>Page</b>
• Added storage temperature $T_{stg}$ to <i>Absolute Maximum Ratings</i> table.....	7
• Changed the <a href="#">Thermal Information, SN65HVD308xE</a> table.....	8
<b>Changes from Revision K (July 2021) to Revision L (November 2021)</b> .....	<b>Page</b>
• 「特長」を削除：小型 MSOP-8 パッケージで供給.....	1
• タイトルから「小型 MSOP-8 パッケージで供給」を削除.....	1
• Changed the $\psi_{JT}$ D package value from 78.8 to 8.8 in the <a href="#">Thermal Information, SNx5HVD3082E</a> .....	8
<b>Changes from Revision J (October 2017) to Revision K (July 2021)</b> .....	<b>Page</b>
• Changed the <i>Thermal Information</i> tables.....	8

<b>Changes from Revision I (September 2016) to Revision J (October 2017)</b>		<b>Page</b>
• Changed 3.3 V to 5 V on the V <sub>CC</sub> pin in <a href="#">図 9-4</a> .....		22
<hr/>		
<b>Changes from Revision H (August 2015) to Revision I (September 2016)</b>		<b>Page</b>
• <a href="#">概要</a> に、「SN65HVD3082E の D パッケージ・バージョンは -40°C ~ 105°C の周囲温度での動作が規定されています」のテキストを追加 .....		1
• Changed the Operating free-air temperature for SN65HVD3082E (D package) From: MAX = 85°C To: 105°C in <a href="#">セクション 6.3</a> .....		8
<hr/>		
<b>Changes from Revision G (May 2009) to Revision H (August 2015)</b>		<b>Page</b>
• 「ピン構成および機能」セクション、「ESD 定格」表、「機能説明」セクション、「デバイスの機能モード」セクション、「アプリケーションと実装」セクション、「電源に関する推奨事項」セクション、「レイアウト」セクション、「デバイスおよびドキュメントのサポート」セクション、「メカニカル、パッケージ、および注文情報」セクションを追加 .....		1
• 「消費電力定格」表を削除.....		1
• Deleted <i>Package Thermal Information</i> table .....		9
<hr/>		
<b>Changes from Revision F (March 2009) to Revision G (May 2009)</b>		<b>Page</b>
• Added Graph - <i>Driver Rise and Fall Time vs Temperature</i> .....		12
• Added IDLE Bus to the <i>Function Table</i> .....		18
• Added <i>Receiver Fail-safe</i> section.....		22

## 5 Pin Configuration and Functions

**图 5-1. D (SOIC), P (PDIP), and DGK (VSSOP) Packages, 8-Pin (Top View)**

**表 5-1. Pin Functions**

PIN		TYPE	DESCRIPTION
NAME	NO.		
R	1	Digital output	Receive data output
$\overline{RE}$	2	Digital input	Receiver enable, active low
DE	3	Digital input	Driver enable, active high
D	4	Digital input	Driver data input
GND	5	Reference potential	Local device ground
A	6	Bus input/output	Driver output or receiver input (complementary to B)
B	7	Bus input/output	Driver output or receiver input (complementary to A)
V <sub>CC</sub>	8	Supply	4.5-V to 5.5-V supply

**图 5-2. SN65HVD3088E, NS Package, 14-pin  
(Top View)**

**表 5-2. Pin Functions, NS Package**

PIN		TYPE	DESCRIPTION
NAME	NO.		
NC	1, 8	No Connect	Not Electrically Connected
R	2	Digital output	Receive data output
RE	3	Digital input	Receiver enable, active low
DE	4	Digital input	Driver enable, active high
D	5	Digital input	Driver data input
GND	6, 7	Reference potential	Local device ground
Y	9	Bus I/O	Differential transceiver input and output (complementary to Z)
Z	10	Bus I/O	Differential transceiver input and output (complementary to Y)
NC	12	No Connect	Not Electrically Connected
NC	11	No Connect	Not Electrically Connected
V <sub>CC</sub>	13, 14	Supply	4.5-V to 5.5-V supply

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range unless otherwise noted<sup>(1) (2)</sup>

	MIN	MAX	UNIT
Supply voltage, $V_{CC}$	-0.5	7	V
Voltage at A or B	-9	14	V
Voltage at any logic pin	-0.3	$V_{CC} + 0.3$	V
Receiver output current	-24	24	mA
Voltage input, transient pulse, A and B, through 100 $\Omega$ (see <a href="#">7-13</a> )	-50	50	V
Junction Temperature, $T_J$		170	$^{\circ}\text{C}$
Storage temperature, $T_{stg}$	-65	150	$^{\circ}\text{C}$

- (1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime
- (2) All voltage values, except differential I/O bus voltages, are with respect to network ground terminal.

### 6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	Bus pins and GND	$\pm 15000$	V
		All pins	$\pm 4000$	
	Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>		$\pm 1000$	
	Electrical Fast Transient/Burst, A, B, and GND <sup>(3)</sup>		$\pm 4000$	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.
- (3) Tested in accordance with IEC 61000-4-4.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range unless otherwise noted<sup>(1)</sup>

		MIN	NOM	MAX	UNIT
Supply voltage, $V_{CC}$		4.5		5.5	V
Voltage at any bus terminal (separately or common mode), $V_I$		-7		12	
High-level input voltage (D, DE, or $\overline{RE}$ inputs), $V_{IH}$		2		$V_{CC}$	V
Low-level input voltage (D, DE, or $\overline{RE}$ inputs), $V_{IL}$		0		0.8	V
Differential input voltage, $V_{ID}$		-12		12	V
Output current, $I_O$	Driver	-60		60	mA
	Receiver	-8		8	
Differential load resistance, $R_L$		54	60		$\Omega$
Signaling rate, $1/t_{UI}$	SN65HVD3082E, SN75HVD3082E			0.2	Mbps
	SN65HVD3085E			1	
	SN65HVD3088E			20	
Operating free-air temperature, $T_A$	SN65HVD3082E (D package)	-40		105	$^{\circ}\text{C}$
	SN65HVD3082E (DGK and P packages), SN65HVD3085E, SN65HVD3088E	-40		85	
	SN75HVD3082E	0		70	
Junction temperature, $T_J$		-40		130	$^{\circ}\text{C}$

(1) The algebraic convention, in which the least positive (most negative) limit is designated as minimum is used in this data sheet.

### 6.4 Thermal Information, SN65HVD308xE

THERMAL METRIC <sup>(1)</sup>		SN65HVD3085E, SN65HVD3088E		SN65HVD3088E	SN65HVD3088E	UNIT
		D (SOIC)	DGK (VSSOP)	P (PDIP)	NS (SO)	
		8 PINS	8 PINS	8 PINS	14 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	116.7	137.8	84.3	88.6	$^{\circ}\text{C}/\text{W}$
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	56.3	31.2	65.4	46.13	$^{\circ}\text{C}/\text{W}$
$R_{\theta JB}$	Junction-to-board thermal resistance	63.4	71.7	62.1	49.12	$^{\circ}\text{C}/\text{W}$
$\psi_{JT}$	Junction-to-top characterization parameter	8.8	0.6	31.3	14.17	$^{\circ}\text{C}/\text{W}$
$\psi_{JB}$	Junction-to-board characterization parameter	62.6	70.5	60.4	48.6	$^{\circ}\text{C}/\text{W}$

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

### 6.5 Thermal Information, SNx5HVD3082E

THERMAL METRIC <sup>(1)</sup>		SN65HVD3082E, SN75HVD3082E		SN65HVD3082E	UNIT
		D (SOIC)	DGK (VSSOP)	P (PDIP)	
		8 PINS	8 PINS	8 PINS

$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	55.1	35.8	65.9	$^{\circ}\text{C}/\text{W}$
$R_{\theta JB}$	Junction-to-board thermal resistance	61.6	75.6	69.0	$^{\circ}\text{C}/\text{W}$
$\psi_{JT}$	Junction-to-top characterization parameter	8.8	0.8	35.2	$^{\circ}\text{C}/\text{W}$
$\psi_{JB}$	Junction-to-board characterization parameter	60.8	74.8	64.3	$^{\circ}\text{C}/\text{W}$

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 6.6 Electrical Characteristics: Driver

over operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT	
V <sub>OD</sub>	Differential output voltage	I <sub>O</sub> = 0, No Load	3	4.3	V	
		R <sub>L</sub> = 54 Ω (see <a href="#">7-1</a> )	1.5	2.3		
		R <sub>L</sub> = 100 Ω	2			
		V <sub>TEST</sub> = -7 V to 12 V (see <a href="#">7-2</a> )	1.5			
Δ V <sub>OD</sub>	Change in magnitude of differential output voltage	See <a href="#">7-1</a> and <a href="#">7-2</a>	-0.2	0	0.2	V
V <sub>OC(SS)</sub>	Steady-state common-mode output voltage	See <a href="#">7-3</a>	1	2.6	3	V
ΔV <sub>OC(SS)</sub>	Change in steady-state common-mode output voltage		-0.1	0	0.1	
V <sub>OC(PP)</sub>	Peak-to-peak common-mode output voltage	See <a href="#">7-3</a>	500		mV	
I <sub>OZ</sub>	High-impedance output current	See receiver input currents in <a href="#">Electrical Characteristics: Receiver</a>				
I <sub>I</sub>	Input current	D, DE	-100		100	μA
I <sub>OS</sub>	Short-circuit output current	-7 V ≤ V <sub>O</sub> ≤ 12 V (see <a href="#">7-7</a> )	-250		250	mA

(1) All typical values are at 25°C and with a 5-V supply.

## 6.7 Electrical Characteristics: Receiver

over operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT	
V <sub>IT+</sub>	Positive-going differential input threshold voltage	I <sub>O</sub> = -8 mA	-85	-10	mV	
V <sub>IT-</sub>	Negative-going differential input threshold voltage	I <sub>O</sub> = 8 mA	-200	-115	mV	
V <sub>hys</sub>	Hysteresis voltage (V <sub>IT+</sub> - V <sub>IT-</sub> )		30		mV	
V <sub>OH</sub>	High-level output voltage	V <sub>ID</sub> = 200 mV, I <sub>OH</sub> = -8 mA (see <a href="#">7-8</a> )	4	4.6	V	
V <sub>OL</sub>	Low-level output voltage	V <sub>ID</sub> = -200 mV, I <sub>O</sub> = 8 mA (see <a href="#">7-8</a> )		0.15	0.4	V
I <sub>OZ</sub>	High-impedance-state output current	V <sub>O</sub> = 0 or V <sub>CC</sub> , $\overline{RE} = V_{CC}$	-1		1	μA
I <sub>I</sub>	Bus input current	V <sub>IH</sub> = 12 V, V <sub>CC</sub> = 5 V		0.04	0.1	mA
		V <sub>IH</sub> = 12 V, V <sub>CC</sub> = 0 V		0.06	0.125	
		V <sub>IH</sub> = -7 V, V <sub>CC</sub> = 5 V	-0.1	-0.04		
		V <sub>IH</sub> = -7 V, V <sub>CC</sub> = 0 V	-0.05	-0.03		
I <sub>IH</sub>	High-level input current, ( $\overline{RE}$ )	V <sub>IH</sub> = 2 V	-60	-30	μA	
I <sub>IL</sub>	Low-level input current, ( $\overline{RE}$ )	V <sub>IL</sub> = 0.8 V	-60	-30	μA	
C <sub>diff</sub>	Differential input capacitance	V <sub>I</sub> = 0.4 sin(4E6πt) + 0.5 V, DE at 0 V		7	pF	

(1) All typical values are at 25°C and with a 5-V supply.

## 6.8 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT
I <sub>CC</sub>	Driver and receiver enabled	D at V <sub>CC</sub> or open, DE at V <sub>CC</sub> , RE at 0 V, No load		425	900	μA
	Driver enabled, receiver disabled	D at V <sub>CC</sub> or open, DE at V <sub>CC</sub> , RE at V <sub>CC</sub> , No load		330	600	μA
	Receiver enabled, driver disabled	D at V <sub>CC</sub> or open, DE at 0 V, RE at 0 V, No load		300	600	μA
	Driver and receiver disabled	D at V <sub>CC</sub> or open, DE at 0 V, RE at V <sub>CC</sub>		0.001	2	μA
P <sub>(AVG)</sub>	Average power dissipation	Input to D is a 50% duty cycle square wave at max specified signal rate R <sub>L</sub> = 54 Ω V <sub>CC</sub> = 5.5 V, T <sub>J</sub> = 130°C	ALL HVD3082E		203	mW
			ALL HVD3085E		205	
			ALL HVD3088E		276	

(1) All typical values are at 25°C and with a 5-V supply.

## 6.9 Switching Characteristics: Driver

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t <sub>PLH</sub> t <sub>PHL</sub>	Propagation delay time, low-to-high-level output Propagation delay time, high-to-low-level output	R <sub>L</sub> = 54 Ω, C <sub>L</sub> = 50 pF (see <a href="#">7-4</a> )	HVD3082E	700	1300	ns
			HVD3085E	150	500	
			HVD3088E	12	20	
t <sub>r</sub> t <sub>f</sub>	Differential output signal rise time Differential output signal fall time	R <sub>L</sub> = 54 Ω, C <sub>L</sub> = 50 pF (see <a href="#">7-4</a> )	HVD3082E	500	900	ns
			HVD3085E	200	300	
			HVD3088E	7	15	
t <sub>sk(p)</sub>	Pulse skew ( t <sub>PHL</sub> – t <sub>PLH</sub>  )	R <sub>L</sub> = 54 Ω, C <sub>L</sub> = 50 pF (see <a href="#">7-4</a> )	HVD3082E	20	200	ns
			HVD3085E	5	50

## 8 Detailed Description

### 8.1 Overview

The SNx5HVD308xE family of half-duplex RS-485 transceivers is suitable for data transmission at rates up to 200 kbps (for SN65HVD3082E and SN75HVD3082E), 1 Mbps (for SN65HVD3085E), or 20 Mbps (for SN65HVD3088E) over controlled-impedance transmission media (such as twisted-pair cabling). Up to 256 units of SNx5HVD308xE may share a common RS-485 bus due to the family's low bus input currents. The devices also feature a high degree of ESD protection and typical standby current consumption of 1 nA.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

The SNx5HVD308xE provides internal biasing of the receiver input thresholds for open-circuit, bus-idle, or short-circuit fail-safe conditions. It features a typical hysteresis of 30 mV in order to improve noise immunity. Internal ESD protection circuits protect the transceiver bus terminals against  $\pm 15$ -kV Human Body Model (HBM) electrostatic discharges.

The devices protect themselves against damage due to overtemperature conditions, through the use of a thermal shutdown feature. Thermal shutdown is entered at 165°C (nominal) and causes the device to enter a low-power state with high-impedance outputs.

### 8.4 Device Functional Modes

When the driver enable pin, DE, is logic high, the differential outputs A and B follow the logic states at data input D. A logic high at D causes A to turn high and B to turn low. In this case the differential output voltage defined as  $V_{OD} = V_A - V_B$  is positive. When D is low, the output states reverse, B turns high, A becomes low, and  $V_{OD}$  is negative.

When DE is low, both outputs turn high-impedance. In this condition the logic state at D is irrelevant. The DE pin has an internal pull-down resistor to ground, thus when left open the driver is disabled (high-impedance) by default. The D pin has an internal pull-up resistor to  $V_{CC}$ , thus, when left open while the driver is enabled, output A turns high and B turns low.

表 8-1. Driver Function Table

INPUT	ENABLE <sup>(1)</sup>	OUTPUTS <sup>(1)</sup>		FUNCTION
		A	B	
H	H	H	L	Actively drive bus High
L	H	L	H	Actively drive bus Low
X	L	Z	Z	Driver disabled
X	OPEN	Z	Z	Driver disabled by default
OPEN	H	H	L	Actively drive bus High by default

(1) H = high level, L = low level, Z = high impedance, X = irrelevant

When the receiver enable pin,  $\overline{RE}$ , is logic low, the receiver is enabled. When the differential input voltage defined as  $V_{ID} = V_A - V_B$  is positive and higher than the positive input threshold,  $V_{IT+}$ , the receiver output, R, turns high. When  $V_{ID}$  is negative and lower than the negative input threshold,  $V_{IT-}$ , the receiver output, R, turns low. If  $V_{ID}$  is between  $V_{IT+}$  and  $V_{IT-}$  the output is indeterminate.

When  $\overline{RE}$  is logic high or left open, the receiver output is high-impedance and the magnitude and polarity of  $V_{ID}$  are irrelevant. Internal biasing of the receiver inputs causes the output to go failsafe-high when the transceiver is disconnected from the bus (open-circuit), the bus lines are shorted (short-circuit), or the bus is not actively driven (idle bus).

**表 8-2. Receiver Function Table**

DIFFERENTIAL INPUT	ENABLE <sup>(1)</sup>	OUTPUT <sup>(1)</sup>	FUNCTION
$V_{ID} = V_A - V_B$	$\overline{RE}$	R	
$V_{IT+} < V_{ID}$	L	H	Receive valid bus High
$V_{IT-} < V_{ID} < V_{IT+}$	L	?	Indeterminate bus state
$V_{ID} < V_{IT-}$	L	L	Receive valid bus Low
X	H	Z	Receiver disabled
X	OPEN	Z	Receiver disabled by default
Open-circuit bus	L	H	Fail-safe high output
Short-circuit bus	L	H	Fail-safe high output
Idle (terminated) bus	L	H	Fail-safe high output

(1) H = high level, L = low level, Z = high impedance, X = irrelevant, ? = indeterminate

## 9 Application and Implementation

### 注

以下のアプリケーション情報は、TI の製品仕様に含まれるものではなく、TI ではその正確性または完全性を保証いたしません。個々の目的に対する製品の適合性については、お客様の責任で判断していただくことになります。お客様は自身の設計実装を検証しテストすることで、システムの機能を確認する必要があります。

### 9.1 Application Information

The SNx5HVD308xE devices are half-duplex RS-485 transceivers commonly used for asynchronous data transmissions. The driver and receiver enable pins allow the configuration of different operating modes.

図 9-1. Half-Duplex Transceiver Configurations

Using independent enable lines provides the most flexible control, as it allows the driver and the receiver to be turned on and off individually. While this configuration requires two control lines, it allows selective listening into the bus traffic whether the driver is transmitting data or not.

Combining the enable signals simplify the interface to the controller, by forming a single direction-control signal. In this configuration, the transceiver operates as a driver when the direction-control line is high and as a receiver when the direction-control line is low.

Additionally, only one line is required when connecting the receiver-enable input to ground and controlling only the driver-enable input. In this configuration, a node not only receives the data from the bus, but also the data it sends and can verify that the correct data has been transmitted.

### 9.2 Typical Application

An RS-485 bus consists of multiple transceivers connecting in parallel to a bus cable. To eliminate line reflections, each cable end is terminated with a termination resistor,  $R_T$ , whose value matches the characteristic impedance,  $Z_0$ , of the cable. This method, known as parallel termination, allows higher data rates over longer cable length.

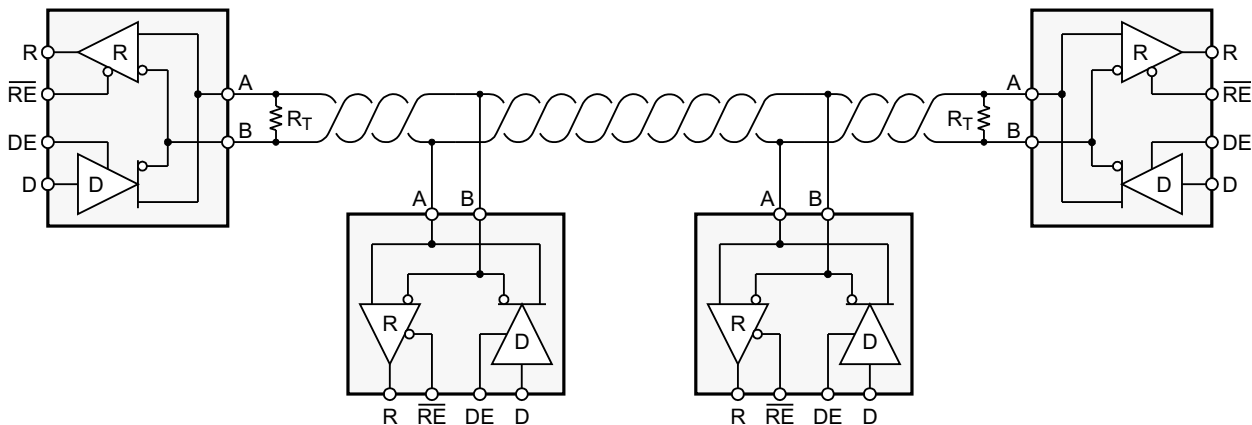

図 9-2. Typical Application Circuit

## 9.2.1 Design Requirements

RS-485 is a robust electrical standard suitable for long-distance networking that may be used in a wide range of applications with varying requirements, such as distance, data rate, and number of nodes.

### 9.2.1.1 Data Rate and Bus Length

The inverse relationship between the data rate and bus length, means the higher the data rate, the shorter the cable length; and conversely, the lower the data rate, the longer the cable can be without introducing data errors. While most RS-485 systems use data rates between 10 kbps and 100 kbps, some applications require data rates up to 250 kbps at distances of 4,000 feet and longer. The longer distances can be achieved by allowing small signal jitter of up to 5 or 10%.

Figure 9-3. Cable Length vs Data Rate Characteristic

### 9.2.1.2 Stub Length

The distance between the transceiver inputs and the cable trunk, which is known as the **stub**, must be short as possible when connecting a node to the bus. Stubs present a non-terminated piece of bus line which can introduce reflections as the length of the stub increases. As a general guideline, the electrical length, or round-trip delay of a stub, must be less than one-tenth of the rise time of the driver, thus giving a maximum physical stub length as shown in 式 1.

$$L_{\text{stub}} \leq 0.1 \times t_r \times v \times c \quad (1)$$

where:

- $t_r$  is the 10/90 rise time of the driver
- $c$  is the speed of light ( $3 \times 10^8$  m/s)
- $v$  is the signal velocity of the cable or trace as a factor of  $c$

### 9.2.1.3 Bus Loading

The RS-485 standard specifies that a compliant driver must be able to driver 32 unit loads (UL), where 1 unit load represents a load impedance of approximately 12 kΩ. The SNx5HVD308xE is a 1/8 UL transceiver, which means it can connect up to 256 receivers to the bus.

### 9.2.1.4 Receiver Fail-safe

The differential receiver is fail-safe to invalid bus states caused by:

- Open bus conditions, such as a disconnected connector
- Shorted bus conditions, such as cable damage shorting the twisted-pair together
- Idle bus conditions that occur when no driver on the bus is actively driving

In any of these cases, the differential receiver outputs a fail-safe logic High state, so that the output of the receiver is not indeterminate.

Receiver fail-safe is accomplished by offsetting the receiver thresholds, so that the *input indeterminate* range does not include zero volts differential. To comply with the RS-422 and RS-485 standards, the receiver output must output a High when the differential input  $V_{ID}$  is more positive than +200 mV, and must output a Low when the  $V_{ID}$  is more negative than -200 mV. The receiver parameters which determine the fail-safe performance are  $V_{IT+}$  and  $V_{IT-}$  and  $V_{HYS}$ . As seen in the [Electrical Characteristics](#) table, differential signals more negative than -200 mV will always cause a Low receiver output and differential signals more positive than +200 mV will always cause a High receiver output.

When the differential input signal is close to zero, it is still above the maximum  $V_{IT+}$  threshold, and the receiver output is High. Only when the differential input is more negative than  $V_{IT-}$  will the receiver output transition to a Low state. The noise immunity of the receiver inputs during a bus fault condition, includes the receiver hysteresis value  $V_{HYS}$  (the separation between  $V_{IT+}$  and  $V_{IT-}$ ) as well as the value of  $V_{IT+}$ .

### 9.2.2 Detailed Design Procedure

In order to protect bus nodes against high-energy transients, the implementation of external transient protection devices is necessary.

Copyright © 2017, Texas Instruments Incorporated

**图 9-4. Transient Protection Against ESD, EFT, and Surge Transients**

图 9-4 suggests a protection circuit against 10-kV ESD (IEC 61000-4-2), 4-kV EFT (IEC 61000-4-4), and 1-kV surge (IEC 61000-4-5) transients. 表 9-1 shows the associated Bill of Materials.

**表 9-1. Bill of Materials**

DEVICE	FUNCTION	ORDER NUMBER	MANUFACTURER
XCVR	RS-485 Transceiver	SNx5HVD308xE	TI
R1, R2	10-Ω, Pulse-Proof Thick-Film Resistor	CRCW060310RJNEAHP	Vishay
TVS	Bidirectional 400-W Transient Suppressor	CDSOT23-SM712	Bourns

### 9.2.2.1 Power Usage in an RS-485 Transceiver

With power consumption being a concern in many applications, power supply current is delivered to the bus load as well as to the transceiver circuitry. For a typical RS-485 bus configuration, the load that an active driver must drive consists of all of the receiving nodes, plus the termination resistors at each end of the bus.

The load presented by the receiving nodes depends on the input impedance of the receiver. The TIA/EIA-485A standard defines a unit load as allowing up to 1 mA. With up to 32 unit loads allowed on the bus, the total current supplied to all receivers can be as high as 32 mA. The HVD308xE is rated as a 1/8 unit load device. As shown in [Figure 6-1](#), the bus input current is less than 0.125 mA, allowing up to 256 nodes on a single bus.

The current in the termination resistors depends on the differential bus voltage. The standard requires active drivers to produce at least 1.5 V of differential signal. For a bus terminated with one standard 120-Ω resistor at each end, this sums to 25 mA differential output current whenever the bus is active. Typically, the HVD308xE can drive more than 25-mA to a 60-Ω load, resulting in a differential output voltage higher than the minimum required by the standard (see [Figure 6-3](#)).

Overall, the total load current can be 60 mA to a loaded RS-485 bus. This is in addition to the current required by the transceiver itself; the HVD308xE circuitry requires only about 0.4 mA with both driver and receiver enabled, and only 0.3 mA with either the driver enabled or with the receiver enabled. In low-power shutdown mode, neither the driver nor receiver is active, and the supply current is low.

Supply current increases with signaling rate primarily due to the totem pole outputs of the driver (see [Figure 6-2](#)). When these outputs change state, there is a moment when both the high-side and low-side output transistors are conducting and this creates a short spike in the supply current. As the frequency of state changes increases, more power is used.

### 9.2.2.2 Low-Power Shutdown Mode

When both the driver and receiver are disabled (DE low and  $\overline{RE}$  high) the device is in shutdown mode. If the enable inputs are in this state for less than 60 ns, the device does not enter shutdown mode. This guards against inadvertently entering shutdown mode during driver or receiver enabling. Only when the enable inputs are held in this state for 300 ns or more, the device is assured to be in shutdown mode. In this low-power shutdown mode, most internal circuitry is powered down, and the supply current is typically 1 nA. When either the driver or the receiver is re-enabled, the internal circuitry becomes active.

If only the driver is re-enabled (DE transitions to high) the driver outputs are driven according to the D input after the enable times given by  $t_{PZH(SHDN)}$  and  $t_{PZL(SHDN)}$  in the driver switching characteristics. If the D input is open when the driver is enabled, the driver outputs default to A high and B low, in accordance with the driver fail-safe feature.

If only the receiver is re-enabled (RE transitions to low) the receiver output is driven according to the state of the bus inputs (A and B) after the enable times given by  $t_{PZH(SHDN)}$  and  $t_{PZL(SHDN)}$  in the receiver switching characteristics. If there is no valid state on the bus the receiver responds as described in the fail-safe operation section.

If both the receiver and driver are re-enabled simultaneously, the receiver output is driven according to the state of the bus inputs (A and B) and the driver output is driven according to the D input.

---

#### 注

The state of the active driver affects the inputs to the receiver. Therefore, the receiver outputs are valid as soon as the driver outputs are valid.

---

## 10 Power Supply Recommendations

To ensure reliable operation at all data rates and supply voltages, each supply must be decoupled with a 100-nF ceramic capacitor located as close to the supply pins as possible. This helps to reduce supply voltage ripple present on the outputs of switched-mode power supplies and also helps to compensate for the resistance and inductance of the PCB power planes.

## 11 Layout

### 11.1 Layout Guidelines

Robust and reliable bus node design often requires the use of external transient protection devices in order to protect against EFT and surge transients that may occur in industrial environments. Due to the wide frequency bandwidth (from approximately 3 MHz to 3 GHz) that the transients have, high-frequency layout techniques must be applied during PCB design.

- Place the protection circuitry close to the bus connector to prevent noise transients from entering the board.
- Use  $V_{CC}$  and ground planes to provide low-inductance.

#### 注

High-frequency currents follow the path of least inductance and not the path of least impedance.

- Design the protection components into the direction of the signal path. Do not force the transients currents to divert from the signal path to reach the protection device.
- Apply 100-nF to 220-nF bypass capacitors as close as possible to the  $V_{CC}$  pins of transceiver, UART, and controller ICs on the board.
- Use at least two vias for  $V_{CC}$  and ground connections of bypass capacitors and protection devices to minimize effective via-inductance.
- Use 1-k $\Omega$  to 10-k $\Omega$  pullup or pulldown resistors for enable lines to limit noise currents in these lines during transient events.
- Insert series pulse-proof resistors into the A and B bus lines if the TVS clamping voltage is higher than the specified maximum voltage of the transceiver bus pins. These resistors limit the residual clamping current into the transceiver and prevent it from latching up.
- While pure TVS protection is sufficient for surge transients up to 1 kV, higher transients require metal-oxide varistors (MOVs) that reduce the transients to a few hundred volts of clamping voltage, and transient blocking units (TBUs) that limit transient current to 200 mA.

### 11.2 Layout Example

图 11-1. Layout Example

### 11.3 Thermal Considerations for IC Packages

$\theta_{JA}$  (Junction-to-Ambient Thermal Resistance) is defined as the difference in junction temperature to ambient temperature divided by the operating power.

$\theta_{JA}$  is **not** a constant and is a strong function of:

- the PCB design (50% variation)
- altitude (20% variation)
- device power (5% variation)

$\theta_{JA}$  can be used to compare the thermal performance of packages when the specific test conditions are defined and used. Standardized testing includes specification of PCB construction, test chamber volume, sensor locations, and the thermal characteristics of holding fixtures.  $\theta_{JA}$  is often misused when it is used to calculate junction temperatures for other installations.

TI uses two test PCBs as defined by JEDEC specifications. The low-k board gives average in-use condition thermal performance and consists of a single trace layer 25-mm long and 2-oz thick copper. The high-k board gives best case in-use condition and consists of two 1-oz buried power planes with a single trace layer 25-mm long with 2-oz thick copper. A 4% to 50% difference in  $\theta_{JA}$  can be measured between these two test cards.

$\theta_{JC}$  (Junction-to-Case Thermal Resistance) is defined as the difference in junction temperature to case divided by the operating power. It is measured by putting the mounted package up against a copper block cold plate, to force heat to flow from the die through the mold compound and into the copper block.

$\theta_{JC}$  is a useful thermal characteristic when a heat sink is applied to package. It is NOT a useful characteristic to predict junction temperature, as it provides pessimistic numbers if the case temperature is measured in a non-standard system and junction temperatures are backed out. It can be used with  $\theta_{JB}$  in 1-dimensional thermal simulation of a package system.

$\theta_{JB}$  (Junction-to-Board Thermal Resistance) is defined to be the difference in the junction temperature and the PCB temperature at the center of the package (closest to the die) when the PCB is clamped in a cold-plate structure.  $\theta_{JB}$  is only defined for the high-k test card.

$\theta_{JB}$  provides an overall thermal resistance between the die and the PCB. It includes a bit of the PCB thermal resistance (especially for BGAs with thermal balls) and can be used for simple 1-dimensional network analysis of package system (see [Figure 11-2](#)).

**Figure 11-2. Thermal Resistance**

These items are sold without warranties of any kind.
- (3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.
- (4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
- (5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.
- (6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

# DGK0008A

# PACKAGE OUTLINE

VSSOP - 1.1 mm max height

SMALL OUTLINE PACKAGE

**NOTES:**

PowerPAD is a trademark of Texas Instruments.

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
5. Reference JEDEC registration MO-187.

# EXAMPLE BOARD LAYOUT

DGK0008A

™ VSSOP - 1.1 mm max height

SMALL OUTLINE PACKAGE

LAND PATTERN EXAMPLE  
EXPOSED METAL SHOWN  
SCALE: 15X

SOLDER MASK DETAILS

4214862/A 04/2023

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.
8. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.
9. Size of metal pad may vary due to creepage requirement.

# EXAMPLE STENCIL DESIGN

DGK0008A

<sup>TM</sup> VSSOP - 1.1 mm max height

SMALL OUTLINE PACKAGE

SOLDER PASTE EXAMPLE  
SCALE: 15X

4214862/A 04/2023

NOTES: (continued)

11. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
12. Board assembly site may have different recommendations for stencil design.

# MECHANICAL DATA

NS (R-PDSO-G\*\*)

PLASTIC SMALL-OUTLINE PACKAGE

14-PINS SHOWN

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15.

D0008A

# PACKAGE OUTLINE

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

4214825/C 02/2019

### NOTES:

- Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
- This drawing is subject to change without notice.
- This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed  $.006$  [0.15] per side.
- This dimension does not include interlead flash.
- Reference JEDEC registration MS-012, variation AA.
