

SNx5LBC176 差動バス・トランシーバ

1 特長

- 双方向トランシーバ
 - ANSI 規格 TIA/EIA-485-A と ISO 8482:1987(E) の要件を満たす、または上回る性能
 - 高速、低消費電力の LinBiCMOS™ 回路
 - シリアルとパラレルの両方のアプリケーションでの高速動作に対応
 - 低スキュー
 - ノイズの多い環境の長いバスラインでのマルチポイントの伝送用に設計
 - 非常に小さいディスエーブル時消費電流 ... 200μA 以下
 - 広い正および負の入力 / 出力バス電圧範囲
 - サーマル・シャットダウン保護
 - ドライバの正および負電流制限
 - 開路フェイルセーフ・レシーバ設計
 - レシーバ入力感度 ... ±200mV 以内
 - レシーバ入力ヒステリシス ... 50mV (標準値)
 - 5V 単一電源で動作
 - グリッチ・フリーのパワーアップ / パワーダウン保護機能
 - Q 温度仕様、車載用として提供
- HighRel 車載用アプリケーション
構成制御 / 印刷サポート
車載規格に基づく認定

2 概要

SN55LBC176、SN65LBC176、SN65LBC176Q、SN75LBC176 差動バス・トランシーバは、マルチポイント・バス伝送ライン上での双方向データ通信を目的として設計されたモノリシック IC です。これらのデバイスは平衡伝送ライン用に設計されており、ANSI 規格 TIA/EIA-485-A (RS-485) および ISO 8482:1987(E) に適合しています。

SN55LBC176、SN65LBC176、SN65LBC176Q、SN75LBC176 は、3 ステート差動ライン・ドライバと差動入力ライン・レシーバを統合しており、どちらも 5V 単一電源で動作します。ドライバとレシーバはそれぞれアクティブ High、アクティブ Low のイネーブルを備えており、それらのイネーブルを外部で互いに接続することで、方向制御として機能させることができます。ドライバの差動出力とレシーバの差動入力、差動入出力 (I/O) バス・ポートを構成するように内部で接続されています。これらのポートは、ドライバがディスエーブルされている場合、または $V_{CC} = 0$ の場合、バスへの負荷を最小化するように設計されています。このポートは広い正負の同相電圧範囲を持っているため、本デバイスはパーティライン・アプリケーションに適しています。ドライバとレシーバをディスエーブルにすることにより、デバイスの消費電流を低減できます。

9 Device and Documentation Support

9.1 Device Support

9.1.1 Thermal Characteristics of IC Packages

θ_{JA} (Junction-to-Ambient Thermal Resistance) is defined as the difference in junction temperature to ambient temperature divided by the operating power.

θ_{JA} is NOT a constant and is a strong function of

- the PCB design (50% variation)
- altitude (20% variation)
- device power (5% variation)

θ_{JA} can be used to compare the thermal performance of packages if the specific test conditions are defined and used. Standardized testing includes specification of PCB construction, test chamber volume, sensor locations, and the thermal characteristics of holding fixtures. θ_{JA} is often misused when it is used to calculate junction temperatures for other installations.

TI uses two test PCBs as defined by JEDEC specifications. The low-k board gives average in-use condition thermal performance and consists of a single trace layer 25 mm long and 2-oz thick copper. The high-k board gives best case in-use condition and consists of two 1-oz buried power planes with a single trace layer 25 mm long with 2-oz thick copper. A 4% to 50% difference in θ_{JA} can be measured between these two test cards.

θ_{JC} (Junction-to-Case Thermal Resistance) is defined as difference in junction temperature to case divided by the operating power. It is measured by putting the mounted package up against a copper block cold plate to force heat to flow from die, through the mold compound into the copper block.

θ_{JC} is a useful thermal characteristic when a heatsink is applied to package. It is NOT a useful characteristic to predict junction temperature as it provides pessimistic numbers if the case temperature is measured in a non-standard system and junction temperatures are backed out. It can be used with θ_{JB} in 1-dimensional thermal simulation of a package system.

θ_{JB} (Junction-to-Board Thermal Resistance) is defined to be the difference in the junction temperature and the PCB temperature at the center of the package (closest to the die) when the PCB is clamped in a cold-plate structure. θ_{JB} is only defined for the high-k test card.

θ_{JB} provides an overall thermal resistance between the die and the PCB. It includes a bit of the PCB thermal resistance (especially for BGA's with thermal balls) and can be used for simple 1-dimensional network analysis of package system (see [Figure 9-1](#)).

9.3 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

PACKAGE OUTLINE

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.
