

SN74LVC2G66 デュアル双方向アナログ・スイッチ

1 特長

- テキサス・インスツルメンツの NanoFree™ パッケージで供給
- 1.65V～5.5Vの V_{CC} で動作
- 5.5Vまでの入力電圧に対応
- 最大 t_{pd} 0.8ns (3.3V時)
- 高いオン/オフ出力電圧比
- 高度な線形性
- 高速、通常0.5ns ($V_{CC} = 3V$, $C_L = 50pF$)
- レール・ツー・レール入出力
- オン状態での低い抵抗、通常 $\approx 6\Omega$ ($V_{CC} = 4.5V$)
- JESD 78, Class II準拠で100mA超のラッチアップ性能

2 アプリケーション

- ワイヤレス・デバイス
- オーディオおよびビデオ信号のルーティング
- ポータブル・コンピュータ
- ウェアラブル・デバイス
- 信号ゲーティング、チョッピング、変調または復調(モデム)
- アナログ/デジタルおよびデジタル/アナログ変換システム用の信号多重化

3 概要

このデュアル双方向アナログ・スイッチは、1.65V～5.5Vの V_{CC} で動作するよう設計されています。

SN74LVC2G66は、アナログとデジタルの両方の信号を扱うことができます。SN74LVC2G66デバイスは、最高5.5V (ピーク)までの振幅の信号を、どちらの方向にも転送できます。

NanoFreeパッケージ技術はICパッケージの概念における主要なブレイクスルーであり、ダイをパッケージとして使用します。

それぞれのスイッチ・セクションには、独自のイネーブル入力制御(C)が存在します。CにHIGHレベルの電圧が印加されると、対応するスイッチ・セクションがオンになります。

信号ゲーティング、チョッピング、変調または復調(モデム)、およびアナログ/デジタルやデジタル/アナログ変換システム用の信号多重化などのアプリケーションに使用できます。

製品情報⁽¹⁾

型番	パッケージ	本体サイズ(公称)
SN74LVC2G66DCT	SSOP (8)	2.95mm×2.80mm
SN74LVC2G66DCU	VSSOP (8)	2.30mm×2.00mm
SN74LVC2G66YZP	DSBGA (8)	1.91mm×0.91mm

5 Pin Configuration and Functions

See mechanical drawings for dimensions.

Pin Functions

NAME	PIN		I/O	DESCRIPTION
	DCT DCU	YZP		
1A	1	A1	I/O	Bidirectional signal to be switched
1B	2	B1	I/O	Bidirectional signal to be switched
2C	3	C1	I	Controls the switch (L = OFF, H = ON)
2A	5	D2	I/O	Bidirectional signal to be switched
2B	6	C2	I/O	Bidirectional signal to be switched
1C	7	B2	I	Controls the switch (L = OFF, H = ON)
GND	4	D1	—	Ground pin
V _{CC}	8	A2	—	Power pin

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V_{CC}	Supply voltage ⁽²⁾	−0.5	6.5	V
V_I	Input voltage ⁽²⁾⁽³⁾	−0.5	6.5	V
V_O	Switch I/O voltage ⁽²⁾⁽³⁾⁽⁴⁾	−0.5	$V_{CC} + 0.5$	V
I_{IK}	Control input clamp current	$V_I < 0$	−50	mA
$I_{I/O}$	I/O port diode current	$V_{I/O} < 0$ or $V_{I/O} > V_{CC}$	−50	mA
I_T	On-state switch current	$V_{I/O} = 0$ to V_{CC}	±50	mA
	Continuous current through V_{CC} or GND		±100	mA
T_{stg}	Storage temperature	−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground, unless otherwise specified.
- (3) The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (4) This value is limited to 5.5 V maximum.

6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	±2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	±1000

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

See ⁽¹⁾.

		MIN	MAX	UNIT
V_{CC}	Supply voltage	1.65	5.5	V
$V_{I/O}$	I/O port voltage	0	V_{CC}	V
V_{IH}	High-level input voltage, control input	$V_{CC} = 1.65 \text{ V to } 1.95 \text{ V}$	$V_{CC} \times 0.65$	V
		$V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$	$V_{CC} \times 0.7$	
		$V_{CC} = 3 \text{ V to } 3.6 \text{ V}$	$V_{CC} \times 0.7$	
		$V_{CC} = 4.5 \text{ V to } 5.5 \text{ V}$	$V_{CC} \times 0.7$	
V_{IL}	Low-level input voltage, control input	$V_{CC} = 1.65 \text{ V to } 1.95 \text{ V}$	$V_{CC} \times 0.35$	V
		$V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$	$V_{CC} \times 0.3$	
		$V_{CC} = 3 \text{ V to } 3.6 \text{ V}$	$V_{CC} \times 0.3$	
		$V_{CC} = 4.5 \text{ V to } 5.5 \text{ V}$	$V_{CC} \times 0.3$	
V_I	Control input voltage	0	5.5	V
$\Delta t/\Delta v$	Input transition rise or fall time	$V_{CC} = 1.65 \text{ V to } 1.95 \text{ V}$	20	ns/V
		$V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$	20	
		$V_{CC} = 3 \text{ V to } 3.6 \text{ V}$	10	
		$V_{CC} = 4.5 \text{ V to } 5.5 \text{ V}$	10	
T_A	Operating free-air temperature	−40	85	°C

- (1) All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, [SCBA004](#).

6.4 Thermal Information

- NOTES:
- A. C_L includes probe and jig capacitance.
 - B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
 - C. All input pulses are supplied by generators have the following characteristics: $PRR \leq 10\text{ MHz}$, $Z_o = 50\text{ }\Omega$.
 - D. The outputs are measured one at a time, with one transition per measurement.
 - E. t_{PLZ} and t_{PHZ} are the same as t_{dis} .
 - F. t_{PZL} and t_{PZH} are the same as t_{en} .
 - G. t_{PLH} and t_{PHL} are the same as t_{pd} .
 - H. All parameters and waveforms are not applicable to all devices.

8 Detailed Description

8.1 Overview

This dual bilateral analog switch is designed for 1.65-V to 5.5-V V_{CC} operation. Robust LVC family technology allows this device to accept input voltages without connecting power to V_{CC} .

The SN74LVC2G66 device permits signals with amplitudes of up to 5.5 V (peak) to be transmitted in either direction. A high-level voltage applied to the control pin C enables the respective switch to begin propagating signals across the device. A low-level voltage disables this transmission. Each device incorporates two switches with independent control and operation.

8.2 Functional Block Diagram

8.3 Feature Description

Each switch section has its own enable-input control (C). A high-level voltage applied to C turns on the associated switch section. When C is this Signals can pass through A to B or B to A. Low ON-resistance of 6 Ω at 4.5-V V_{CC} is ideal for analog signal conditioning systems. The control signals can accept voltages up to 5.5 V without V_{CC} connected in the system. Combination of lower t_{pd} of 0.8 ns at 3.3 V and low enable and disable time make this part suitable for high-speed signal switching applications.

8.4 Device Functional Modes

Table 1 lists the functional modes of the SN74LVC2G66.

Table 1. Function Table

CONTROL INPUT (C)	SWITCH
L	Off
H	On

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The SN74LVC2G66 can be used in any situation where an Dual SPST switch would be used and a solid-state, voltage controlled version is preferred.

9.2 Typical Application

Figure 11. Typical Application Schematic

9.2.1 Design Requirements

The SN74LVC2G66 allows on/off control of analog and digital signals with a digital control signal. All input signals should remain between 0 V and V_{CC} for optimal operation.

9.2.2 Detailed Design Procedure

1. Recommended Input Conditions:
 - For rise time and fall time specifications, see $\Delta t/\Delta v$ in the [Recommended Operating Conditions](#) table.
 - For specified high and low levels, see V_{IH} and V_{IL} in the [Recommended Operating Conditions](#) table.
 - Inputs and outputs are overvoltage tolerant allowing them to go as high as 5.5 V at any valid V_{CC} .
2. Recommended Output Conditions:
 - Load currents should not exceed ± 50 mA.
3. Frequency Selection Criterion:
 - Maximum frequency tested is 150 MHz.
 - Added trace resistance or capacitance can reduce maximum frequency capability; use layout practices as directed in [Layout](#).

Typical Application (continued)

9.2.3 Application Curve

Pin: A–B, $V_{CC} = 3\text{ V}$, $I_S = 24\text{ mA}$

Figure 12. r_{on} vs V_I

10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the [Recommended Operating Conditions](#).

Each V_{CC} terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1- μF bypass capacitor is recommended. If there are multiple pins labeled V_{CC} , then a 0.01- μF or 0.022- μF capacitor is recommended for each V_{CC} because the VCC pins will be tied together internally. For devices with dual-supply pins operating at different voltages, for example V_{CC} and V_{DD} , a 0.1- μF bypass capacitor is recommended for each supply pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. 0.1- μF and 1- μF capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

11 Layout

11.1 Layout Guidelines

Reflections and matching are closely related to loop antenna theory, but different enough to warrant their own discussion. When a PCB trace turns a corner at a 90° angle, a reflection can occur. This is primarily due to the change of width of the trace. At the apex of the turn, the trace width is increased to 1.414 times its width. This upsets the transmission line characteristics, especially the distributed capacitance and self-inductance of the trace — resulting in the reflection.

NOTE

Not all PCB traces can be straight, and so they will have to turn corners. [Figure 13](#) shows progressively better techniques of rounding corners. Only the last example maintains constant trace width and minimizes reflections.

11.2 Layout Example

Figure 13. Trace Example

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PACKAGE OUTLINE

VSSOP - 0.9 mm max height

SMALL OUTLINE PACKAGE

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. Reference JEDEC registration MO-187 variation CA.
