

TCA9416 立ち上がり時間アクセラレータ搭載、超低電圧 I²C トランスレータ

1 特長

- I²C アプリケーションの SDA および SCL ライン用の 2 ビット双方向トランスレータ
- 方向ピンを必要としない双方向電圧レベル変換
- OE = 0V または V_{CC} = 0V 時に出力 SCL_A、SDA_A、SCL_B、SDA_B ピンはハイ・インピーダンス
- すべての SDA および SCL ピンの内部 10kΩ プルアップ抵抗は、それぞれの V_{CC} 電圧に基づいて有効化
- A ポートと B ポートの両方で 1.08V~3.6V
- V_{CC} 絶縁機能: どちらかの V_{CC} 入力が高インピーダンス状態になると、両方のポートが高インピーダンス状態になる (プルアップを除く)
- 電源投入のシーケンス不要: V_{CCA} と V_{CCB} のどちらからでも立ち上げ可能
- 低 I_{off}: V_{CCA} または V_{CCB} = 0V 時に 2.5μA
- OE 入力は V_{CCA} に直結、または GPIO により制御可能
- JESD 78、Class II 準拠で 100mA 超のラッチアップ性能
- JESD 22 を超える ESD 保護
 - 2500V、人体モデル (A114-B)
 - 1500V、デバイス帯電モデル (C101)

2 アプリケーション

- ウェアラブル
- パーソナル・エレクトロニクス
- サーバー

3 概要

TCA9416 は、出力イネーブル (OE) 入力と立ち上がりおよび立ち下がりエッジ・アクセラレータとを備えた 2 ビット、双方向 I²C および SMBus 電圧レベル・トランスレータです。このデバイスは、A 側と B 側の両方で 1.08V~3.6V で動作します。これによって、標準的な 1.2V、1.8V、2.5V、3.3V の電源レールのいずれについても、異なる信号レベル間でのインターフェイスが可能です。

OE 入力ピンは V_{CCA} を基準とし、V_{CCA} に直結できますが、3.6V も許容します。また、OE ピンを制御してロジック LOW に設定すると、すべての SCL および SDA ピンをハイ・インピーダンス状態にすることができ、静止時消費電流が大幅に減少します。

通常の I²C および SMBus 構成では、TCA9416 は標準的な速度 (SCL の周波数が 100kHz (標準モード)、400kHz (高速モード)、1MHz (高速モード・プラス)) と互換性があります。

TCA9416 は、SCL_A、SDA_A、SCL_B、SDA_B に 10kΩ のプルアップ抵抗が内蔵されています。合計プルアップ抵抗を減らし、立ち上がりエッジを高速化するため、バスに外部プルアップ抵抗を追加することもできます。

表 5-1. Pin Functions

PIN			TYPE	DESCRIPTION
NAME	DTM	DDF		
SCL_A	1	1	I/O	Input/output A. Referenced to V _{CCA} .
VCCA	2	3	Power	A-port supply voltage. $1.08\text{ V} \leq V_{CCA} \leq 3.6\text{ V}$
SDA_A	3	4	I/O	Input/output A. Referenced to V _{CCA} .
GND	4	6	GND	Ground
SDA_B	5	5	I/O	Input/output B. Referenced to V _{CCB} .
VCCB	6	7	Power	B-port supply voltage. $1.08\text{ V} \leq V_{CCB} \leq 3.6\text{ V}$
SCL_B	7	8	I/O	Input/output B. Referenced to V _{CCB} .
OE	8	2	Input	Output enable (active High). Pull OE low to place all outputs in 3-state mode. Referenced to V _{CCA} .

6 Specifications

6.1 Absolute Maximum Ratings

over recommended operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_{CCA}	Supply voltage range		–0.5	4	V
V_{CCB}	Supply voltage range		–0.5	4	V
V_I	Input voltage range ⁽¹⁾	A port	–0.5	4	V
		B port	–0.5	4	
V_O	Voltage range applied to any output in the high-impedance or power-off state ⁽¹⁾	A port	–0.5	4	V
		B port	–0.5	4	
V_O	Voltage range applied to any output in the high or low state ^{(1) (2)}	A port	–0.5	4	V
		B port	–0.5	4	
I_{IK}	Input clamp current	$V_I < 0$		–50	mA
I_{OK}	Output clamp current	$V_O < 0$		–50	mA
I_O	Continuous output current			±50	mA
	Continuous current through V_{CCA} , V_{CCB} , or GND			±100	mA
T_{stg}	Storage temperature		–65	150	°C

(1) The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.

(2) The value of V_{CCA} and V_{CCB} are provided in the recommended operating conditions table.

6.2 ESD Ratings

				VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	A-Ports, B-Ports	±2500	V
			V _{CCA} , V _{CCB} , OE	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾		±1000	V

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over recommended operating free-air temperature range (unless otherwise noted)

			V_{CCA}	V_{CCB}	MIN	MAX	UNIT
V_{CCA}	Supply voltage				1.08	3.6	V
V_{CCB}	Supply voltage				1.08	3.6	V
V_I	Input voltage	A-port I/Os, B-port I/Os, OE	0 V to 3.6 V	0 V to 3.6 V	0	3.6	V
V_{IH}	High-level input voltage	OE input	1.08 V to 3.6 V	1.08 V to 3.6 V	$V_{CCA} \times 0.65$	3.6	V
V_{IL}	Low-level input voltage	OE input	1.08 V to 3.6 V	1.08 V to 3.6 V	0	$V_{CCA} \times 0.35$	V
T_A	Operating free-air temperature				–40	125	°C

7-1. Load Circuit for Pulse Duration, Propagation Delay, Output Rise-Time and Fall-Time Measurement

1. $R_L = 1.35 \text{ k}\Omega$
2. R_T termination resistance should be equal to Z_{OUT} of pulse generators.
3. C_L includes probe and jig capacitance. $C_L = 50 \text{ pF}$ when on the B-side.
4. All input pulses are supplied by generators having the following characteristics: $PRR \leq 10 \text{ MHz}$, $Z_O = 50 \Omega$, slew rate $\geq 1 \text{ V/ns}$.
5. t_{PLZ} and t_{PHZ} are the same as t_{dis} .
6. t_{PZL} and t_{PZH} are the same as t_{en} .
7. V_{CCI} is the V_{CC} associated with the input port.
8. V_{CCO} is the V_{CC} associated with the output port.

7.1 Voltage Waveforms

Figure 7-2. Propagation Delay Times

1. C_L includes probe and jig capacitance.
2. Waveform 1 in Figure 7-3 is for an output with internal such that the output is high, except when OE is high (see Figure 7-1). Waveform 2 in Figure 7-3 is for an output with conditions such that the output is low, except when OE is high.
3. All input pulses are supplied by generators having the following characteristics: $PRR \leq 10$ MHz, $Z_O = 50 \Omega$, $dv/dt \geq 1$ V/ns.
4. The outputs are measured one at a time, with one transition per measurement.
5. t_{PLZ} and t_{PHZ} are the same as t_{dis} .
6. t_{PZL} and t_{PZH} are the same as t_{en} .
7. t_{PLH} and t_{PHL} are the same as t_{pd} .
8. V_{CCI} is the V_{CC} associated with the input port.
9. V_{CCO} is the V_{CC} associated with the output port.

Figure 7-3. Enable and Disable Times

8 Detailed Description

8.1 Overview

The TCA9416 device is a directionless voltage-level translator specifically designed for translating logic voltage levels. The A and B ports are able to accept I/O voltages ranging from 1.08 V to 3.6 V. The device is a pass-gate architecture with edge-rate accelerators (one-shots) to improve the overall data rate. 10-k Ω pull up resistors, commonly used in open-drain applications, have been conveniently integrated so that an external resistor is not needed. When TCA9416 is disabled the one shots are also disabled, but the internal pull ups are still enabled. Pull up resistors are gated on the supply voltage. When supply is above UVLO, the pull up resistor for that specific side (A vs B) is enabled.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 Architecture

The TCA9416 architecture (see [Figure 8-1](#)) is an auto-direction-sensing based translator that does not require a direction-control signal to control the direction of data flow from A to B or from B to A.

FIG 8-1. Architecture of a TCA9416 Cell

These two bidirectional channels support both directions of data flow without a direction-control signal. By properly biasing the gate of the pass-FET, the FET can turn on (low $R_{DS(on)}$), when either side input voltage drops to ~ 1 voltage threshold below the lowest of the two supplies.

The TCA9416 is part of the TI "Switch" type voltage translator family and employs key circuits to enable this voltage translation:

1. An N-channel pass-gate transistor topology that ties the A-port to the B-port.
2. Output rise time accelerator circuitry to detect and accelerate rising edges on the A or B ports
3. Output fall time accelerator circuitry to detect and accelerate falling edges on the A or B ports

For bidirectional voltage translation, pull up resistors are included on the device for dc current sourcing capability. The V_{GATE} gate bias of the N-channel pass transistor is set to the lower supply voltage and can be represented with $\min(V_{CCA}, V_{CCB})$.

The rise and fall time accelerator (RTA and FTA, respectively) circuitry speeds up the output slew rate by monitoring the input edge for transitions, helping maintain the data rate through the device. During a low-to-high signal rising edge, the rise time accelerator (RTA) circuit turns on to increase the current drive capability of the driver. This edge-rate acceleration provides high ac drive by bypassing the internal 10-kΩ pull up resistors during the low-to-high transition to speed up the signal. The output resistance of the driver is decreased to approximately 150 Ω during this acceleration phase. During a high-to-low signal falling edge, the fall time accelerator (FTA) turns on to increase the current drive capability of the driver, similar to the rise time accelerator. This helps reduce the fall time for large capacitive loads. For light capacitive loads, the fall time accelerator will not enable.

Both the rise and fall time accelerators have logic to control the rate at which they turn on and off, in order to reduce ringing and over/undershoots.

8.3.2 Enable and Disable

The TCA9416 has an OE input that is used to disable the device by setting OE low, which prevents any signals from propagating across the device. This pin is referenced to the V_{CCA} supply. The rise and fall time accelerators are also disabled. Note that the internal pull up resistors will still be enabled if the supply is above V_{UVLO} . The disable time (t_{dis}) indicates the delay between the time when OE goes low and when the outputs are disabled (Hi-Z). The enable time (t_{en}) indicates the amount of time the user must allow for the one-shot circuitry to become operational after OE is taken high.

8.3.3 Pull up resistors on I/O Lines

Each A-port I/O has an internal 10-k Ω pull up resistor to V_{CCA} , and each B-port I/O has an internal 10-k Ω pull up resistor to V_{CCB} . If a smaller value of pull up resistor is required, an external resistor must be added from the I/O to V_{CCA} or V_{CCB} (in parallel with the internal 10-k Ω resistors). However, adding lower value pull up resistors effects V_{OL} levels. It is recommended not to go below 1.5-k Ω . The internal pull ups of the TCA9416 are controlled by their respective supplies. The resistors have back-biasing protection, so that if a supply is off, the current cannot flow through the resistors back into the supply. If a supply is above V_{UVLO_RISE} , the pull up resistor for its side is enabled.

8.4 Device Functional Modes

The TCA9416 device has two functional modes, enabled and disabled. To disable the device set the OE input low, which disables the rise time and fall time accelerators, and prevents signals from propagating across the channels. The internal pull up resistors are not affected by the OE input. Setting the OE input high enables the device.

9 Application and Implementation

Note

以下のアプリケーション情報は、TI の製品仕様に含まれるものではなく、TI ではその正確性または完全性を保証いたしません。個々の目的に対する製品の適合性については、お客様の責任で判断していただくことになります。お客様は自身の設計実装を検証しテストすることで、システムの機能を確認する必要があります。

9.1 Application Information

The TCA9416 can be used to bridge the digital-switching compatibility gap between two voltage nodes to successfully interface logic threshold levels found in electronic systems. It should be used in a point-to-point topology for interfacing devices or systems operating at different interface voltages with one another. The primary target application use is for interfacing with open-drain drivers on the data I/Os such as I²C or SMBus, where the data is bidirectional and no control signal is available.

9.2 Typical Application

図 9-1. Typical Application Circuit

9.2.1 Design Requirements

For this design example, use the parameters listed in 表 9-1.

表 9-1. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage range	1.08 to 3.6 V
Output voltage range	1.08 to 3.6 V

9.2.2 Detailed Design Procedure

To begin the design process, determine the following:

- Input voltage range
 - Use the supply voltage of the device that is driving the TCA9416 device to determine the input voltage range. For a valid logic high, the value must exceed the V_{IH} of the input port. For a valid logic low, the value must be less than the V_{IL} of the input port.
- Output voltage range
 - Use the supply voltage of the device that the TCA9416 device is driving to determine the output voltage range
 - The TCA9416 device has 10-kΩ internal pull up resistors. External pull up resistors can be added to reduce the total RC of a signal trace if necessary.

9.2.2.1 Startup Considerations with Large Capacitive Load Mismatches

Due to the FET based architecture of this translator, there are some considerations a system designer must be aware of during powering up with large differences in capacitance between the sides. If one supply with smaller capacitance is already powered up, and the other is ramping (with OE pin high), the side with the heavier load can ramp slower than the power supply ramp, due to only having an internal 10k Ω pull up resistor. In this situation, once the rising POR threshold is met, the device enables all circuitry. If the heavy capacitance side has not yet risen above about 70% of supply, the device determines this as low, and briefly turns on the fall time accelerators to propagate a low. Once the fall time accelerator has timed out, the signals rise and sit idle high.

This phenomenon can be eliminated by holding the OE pin low (disabled) until all supplies and busses have ramped up, since this explicitly disables the bus acceleration circuitry until the bus has completed power up. Slower supply ramps also help reduce this since the bus voltage follows the supply closer if the ramp is slow.

9.2.3 Application Curve

9-2. Level-Translation of a 1-MHz Signal

10 Power Supply Recommendations

The TCA9416 has no supply restrictions outside of the 1.08 V to 3.6 V range. V_{CCA} can be higher than or lower than V_{CCB} . The internal circuitry will select the appropriate supply automatically to correctly support translation. V_{CCA} can also be the same as V_{CCB} , and the device can be used as a buffer.

The sequencing of each power supply does not damage the device during the power up operation, so either power supply can be ramped up first. The output-enable (OE) input circuit is designed so that when the (OE) input is low, the outputs are disabled. No signals may propagate, and the rise time and fall time accelerators are disabled, but the internal pull up resistors will remain unaffected. To make sure the signals do not pass through during power up or power down, the OE input pin must be tied to GND through a pull down resistor and should not be enabled until V_{CCA} and V_{CCB} are fully ramped and stable. If OE is tied to V_{CCA} , this is OK, but might result in a glitch on the bus during power up depending on the capacitive load and ramp rates. The minimum value of the pull down resistor to ground is determined by the current-sourcing capability of the driver.

11 Layout

11.1 Layout Guidelines

For reliability of the device, the following common printed-circuit board layout guidelines are recommended:

1. Bypass capacitors should be used on power supplies and should be placed as close as possible to the V_{CCA} , V_{CCB} pin, and G_{ND} pin.
2. Short trace lengths should be used to avoid excessive loading.
3. Keep SCL and SDA lengths close to prevent skewing the signals.
4. PCB signal trace-lengths must be kept short enough so that the round-trip delay of any reflection is less than the one-shot duration, approximately 30 ns. Making sure that any reflection encounters low impedance at the source driver.

11.2 Layout Example

11-1. TCA9416 Layout Example (DDF)

12 Device and Documentation Support

12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](https://www.ti.com). Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.2 サポート・リソース

[TI E2E™ サポート・フォーラム](#)は、エンジニアが検証済みの回答と設計に関するヒントをエキスパートから迅速かつ直接得ることができる場所です。既存の回答を検索したり、独自の質問をしたりすることで、設計に必要な支援を迅速に得ることができます。

リンクされているコンテンツは、該当する貢献者により、現状のまま提供されるものです。これらは TI の仕様を構成するものではなく、必ずしも TI の見解を反映したものではありません。TI の[使用条件](#)を参照してください。

12.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.

すべての商標は、それぞれの所有者に帰属します。

12.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

12.5 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package Pins	Package qty Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
TCA9416DDFR	Active	Production	SOT-23-THIN (DDF) 8	3000 LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 125	2JGF
TCA9416DDFR.A	Active	Production	SOT-23-THIN (DDF) 8	3000 LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 125	2JGF
TCA9416DTMR	Active	Production	X2SON (DTM) 8	5000 LARGE T&R	Yes	NIPDAU NIPDAUAG	Level-1-260C-UNLIM	-40 to 125	LC
TCA9416DTMR.A	Active	Production	X2SON (DTM) 8	5000 LARGE T&R	Yes	NIPDAUAG	Level-1-260C-UNLIM	-40 to 125	LC

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
TCA9416DDFR	SOT-23-THIN	DDF	8	3000	180.0	8.4	3.2	3.2	1.4	4.0	8.0	Q3
TCA9416DTMR	X2SON	DTM	8	5000	178.0	8.4	0.93	1.49	0.43	2.0	8.0	Q1
TCA9416DTMR	X2SON	DTM	8	5000	180.0	9.5	0.93	1.49	0.43	2.0	8.0	Q1

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

DTM0008A

PACKAGE OUTLINE

X2SON - 0.4 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

4224755/B 10/2022

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad(s) must be soldered to the printed circuit board for thermal and mechanical performance.

EXAMPLE BOARD LAYOUT

DTM0008A

X2SON - 0.4 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:40X

SOLDER MASK DETAILS

4224755/B 10/2022

NOTES: (continued)

- This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slue271).

SOLDER PASTE EXAMPLE
 BASED ON 0.075 mm THICK STENCIL
 SCALE: 40X

4224755/B 10/2022

5. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

4222047/E 07/2024

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.

EXAMPLE BOARD LAYOUT

DDF0008A

SOT-23-THIN - 1.1 mm max height

PLASTIC SMALL OUTLINE

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:15X

SOLDER MASK DETAILS

4222047/E 07/2024

NOTES: (continued)

4. Publication IPC-7351 may have alternate designs.
5. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

DDF0008A

SOT-23-THIN - 1.1 mm max height

PLASTIC SMALL OUTLINE

SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:15X

4222047/E 07/2024

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
7. Board assembly site may have different recommendations for stencil design.
