

50 MHz to 750 MHz CASCADEABLE AMPLIFIER

Check for Samples: [THS9001](#)

FEATURES

- **High Dynamic Range**
 - $OIP_3 = 36 \text{ dBm}$
 - $NF < 4.5 \text{ dB}$
- **Single-Supply Voltage**
- **High Speed**
 - $V_S = 3 \text{ V to } 5 \text{ V}$
 - $I_S = \text{Adjustable}$
- **Input/Output Impedance**
 - 50Ω

APPLICATIONS

- **IF Amplifiers**
 - TDMA: GSM, IS-136, EDGE/UWE-136
 - CDMA: IS-95, UMTS, CDMA2000
 - Wireless Local Loops
 - Wireless LAN: IEEE802.11

DESCRIPTION

The THS9001 is a medium power, cascadeable, gain block optimized for high IF frequencies. The amplifier incorporates internal impedance matching to 50Ω , and achieves greater than 15-dB input, and output return loss from 50 MHz to 350 MHz with $V_S = 5 \text{ V}$, $R_{(BIAS)} = 237 \Omega$, $L_{(COL)} = 470 \text{ nH}$. Design requires only 2 dc-blocking capacitors, 1 power-supply bypass capacitor, 1 RF choke, and 1 bias resistor.

Function Block Diagram

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

AVAILABLE OPTIONS

PACKAGED DEVICE ⁽¹⁾	PACKAGE TYPE	TRANSPORT MEDIA, QUANTITY
THS9001DBVT	SOT-23-6	Tape and Reel, 250
THS9001DBVR		Tape and Reel, 3000

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI Web site at www.ti.com.

ABSOLUTE MAXIMUM RATINGS

Over operating free-air temperature (unless otherwise noted)⁽¹⁾

			UNIT
V _{SS}	Supply voltage, GND to V _S		5.5
V _I	Input voltage		GND to V _S
	Continuous power dissipation		See Dissipation Rating table
T _J	Maximum junction temperature		150°C
T _J	Maximum junction temperature, continuous operation, long term reliability ⁽²⁾		125°C
T _{stg}	Storage temperature		–65 to 150°C
:	ESD Ratings	HBM	2000
		CDM	1500
		MM	100

- (1) The absolute maximum ratings under any condition is limited by the constraints of the silicon process. Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.
- (2) The maximum junction temperature for continuous operation is limited by package constraints. Operation above this temperature may result in reduced reliability and/or lifetime of the device.

DISSIPATION RATING TABLE

PACKAGE	θ_{JC} (°C/W)	θ_{JA} (°C/W)	POWER RATING ⁽¹⁾	
			T _A ≤ 25°C	T _A = 85°C
DBV ⁽²⁾	70.1	215	463 W	185 mW

- (1) Power rating is determined with a junction temperature of 125°C. Thermal management of the final PCB should strive to keep the junction temperature at or below 125°C for best performance.
- (2) This data was taken using the JEDEC standard High-K test PCB.

RECOMMENDED OPERATING CONDITIONS

		MIN	NOM	MAX	UNIT
V _{SS}	Supply voltage	2.7		5	V
T _A	Operating free-air temperature,	–40		85	°C
I _S	Supply current		100		mA

ELECTRICAL CHARACTERISTICS

Typical Performance ($V_S = 5\text{ V}$, $R_{\text{BIAS}} = 237\ \Omega$, $L_{\text{(COL)}} = 470\text{ nH}$) (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNITS
Gain	$f = 50\text{ MHz}$		15.8		dB
	$f = 350\text{ MHz}$		15		
OIP ₃	$f = 50\text{ MHz}$		35		dBm
	$f = 350\text{ MHz}$		37		
1-dB compression	$f = 50\text{ MHz}$		20.6		dBm
	$f = 350\text{ MHz}$		20.6

APPLICATION INFORMATION

The THS9001 is a medium power, cascadeable, amplifier optimized for high intermediate frequencies in radios. The amplifier is unconditionally stable and the design requires only 2 dc-blocking capacitors, 1 power-supply bypass capacitor, 1 RF choke, and 1 bias resistor. Refer to [Figure 25](#) for the circuit diagram.

The THS901 operates with a power-supply voltage ranging from 2.5 V to 5.5 V.

The value of $R_{(BIAS)}$ sets the bias current to the amplifier. Refer to [Figure 14](#). This allows the designer to trade-off linearity versus power consumption. $R_{(BIAS)}$ can be removed without damage to the device.

Component selection of $C_{(BYP)}$, C_{IN} , and C_{OUT} is not critical. The values shown in [Figure 25](#) were used for all the data shown in this data sheet.

The amplifier incorporates internal impedance matching to 50 Ω that can be adjusted for various frequencies of operation by proper selection of $L_{(COL)}$.

[Figure 20](#) shows the s-parameters of the part mounted on the standard EVM with $V_S = 5$ V, $R_{(BIAS)} = 237$ Ω , and $L_{(COL)} = 470$ nH. With this configuration, the part is very broadband, and achieves greater than 15-dB input and output return loss from 50 MHz to 325 MHz.

Figure 20. S-Parameters of THS9001 Mounted on the Standard EVM with $V_S = 5$ V, $R_{(BIAS)} = 237$ Ω , and $L_{(COL)} = 470$ nH

Figure 21 shows an example of a single conversion receiver architecture and where the THS9001 would typically be used.

Figure 21. Example Single Conversion Receiver Architecture

Figure 22 shows an example of a dual conversion receiver architecture and where the THS9001 would typically be used.

Figure 22. Example Dual Conversion Receiver Architecture

Figure 23 shows an example of a dual conversion transmitter architecture and where the THS9001 would typically be used.

Figure 23. Example Dual Conversion Transmitter Architecture

Figure 24 shows the THS9001 and Sawtek #854916 SAW filter frequency response along with the frequency response of the SAW filter alone. The SAW filter has a center frequency of 140 MHz with 10-MHz bandwidth and 8-dB insertion loss. It can be seen that the frequency response with the THS9001 is the same as with the SAW except for a 15-dB gain. The THS9001 is mounted on the standard EVM with $V_S = 5\text{ V}$, $R_{(\text{BIAS})} = 237\ \Omega$, and $L_{(\text{COL})} = 470\text{ nH}$. Note the amplifier does not add artifacts to the signal.

- Changed the data sheet title From: 50 MHz to 400 MHz CASCADEABLE AMPLIFIER To: 50 MHz to 750 MHz
CASCADEABLE AMPLIFIER 1

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package Pins	Package qty Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
THS9001DBVT	Active	Production	SOT-23 (DBV) 6	250 SMALL T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 85	NWL
THS9001DBVT.B	Active	Production	SOT-23 (DBV) 6	250 SMALL T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 85	NWL

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

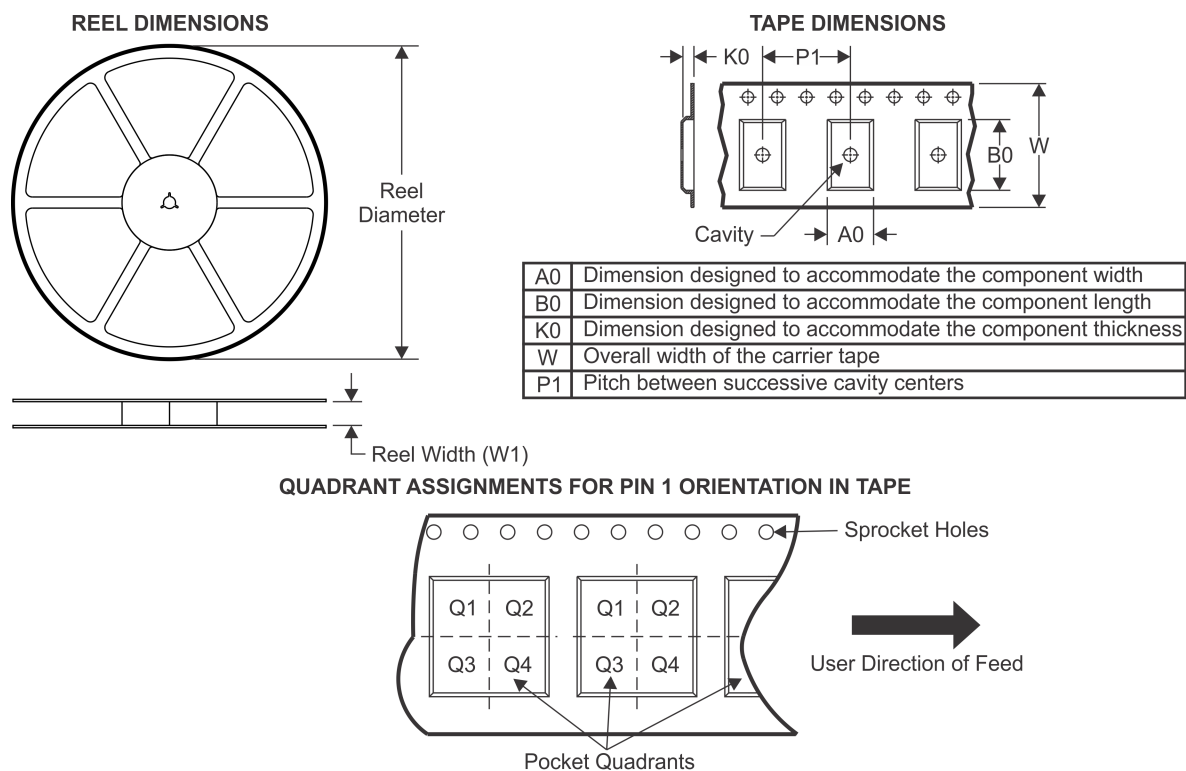

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
