

TLV700xx-Q1 200-mA Low- I_Q Low-Dropout Regulator for Portable Devices

1 Features

- Qualified for Automotive Applications
- AEC-Q100 Qualified With the Following Results:
 - Device Temperature Grade 1: -40°C to 125°C Ambient Operating Temperature Range
 - Device HBM ESD Classification Level H2
 - Device CDM ESD Classification Level C4B
- 2% Accuracy
- Low I_Q : 31 μA
- Fixed Output Voltages
 - TLV70033-Q1: 3.3 V
 - TLV70030-Q1: 3 V
 - TLV70025-Q1: 2.5 V
 - TLV70012A-Q1: 1.2 V
- High PSRR: 68 dB at 1 kHz
- Stable With Effective Capacitance of 0.1 μF
- Thermal Shutdown and Overcurrent Protection
- Latch-Up Performance Meets 100 mA Per AEC-Q100, Level I
- Available in the SOT-5 (DDC) and SC70-5 (DCK) Packages

2 Applications

Automotive Second-Stage Power Supply

3 Description

The TLV700xx-Q1 family of low-dropout (LDO) linear regulators are low-quiescent-current devices with excellent line- and load-transient performance. These LDOs are designed for power-sensitive applications. A precision band-gap and error amplifier provides overall 2% accuracy. Low output noise, very high power-supply rejection ratio (PSRR), and low dropout voltage make this series of devices ideal for most battery-operated handheld equipment or for working as a second-stage power supply for connecting automotive battery applications. All device versions have thermal shutdown and current limit for safety.

Furthermore, these devices are stable with an effective output capacitance of only 0.1 μF . This feature enables the use of cost-effective capacitors that have higher bias voltages and temperature derating. The devices regulate to specified accuracy with no output load.

The TLV700xx-Q1 LDOs are available in the SOT-5 (DDC) and the SC70-5 (DCK) packages.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TLV70012A-Q1	SC70 (5)	2.00 mm $\times$ 1.25 mm

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision G (September 2015) to Revision H	Page
Deleted all occurrences of TLV70028-Q1 and TLV70032-Q1 throughout the data sheet	1
Added an I/O column to the <i>Pin Functions</i> table	3
Added <i>Recommended Operating Conditions</i> table to the data sheet.....	4
Moved "High-ESR capacitors..." sentence here from the former <i>Board Layout Recommendations to Improve PSRR and Noise Performance</i> section 8.1.2	12
Deleted the <i>Board Layout Recommendations to Improve PSRR and Noise Performance</i> section. Moved its non-redundant contents to <i>Input and Output Capacitor Requirements</i> or <i>Layout Guidelines</i> , as appropriate.....	12
Changed Z to R in the equations	14
Moved some layout information here from former Sectioni 8.1.2, <i>Board Layout Recommendations to Improve PSRR and Noise Performance</i>	14
Added the <i>Receiving Notification of Documentation Updates</i> section	16

Changes from Revision F (August 2013) to Revision G	Page
Added <i>Pin Configuration and Functions</i> section, <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section	1

Changes from Revision E (January 2013) to Revision F	Page
Changed CDM classification level from C3B to C4B in FEATURES list.....	1
Changed Added T_J to the <i>Absolute Maximum Ratings</i> and moved T_A to the <i>Recommended Operating Conditions</i>	3
Changed Ground pin current (shutdown) max value from 2 to 2.5 in <i>Electrical Characteristics</i> table	4
Added TLV70028-Q1 and TLV70032-Q1 to document	13

5 Pin Configuration and Functions

NC – No internal connection

Pin Functions

PIN		I/O	DESCRIPTION
NAME	NO.		
EN	3	I	Enable pin. Driving EN over 0.9 V turns on the regulator. Driving EN below 0.4 V puts the regulator into shutdown mode and reduces operating current to 1 μ A, nominal.
IN	1	I	Input pin. A small 1- μ F ceramic capacitor is recommended from this pin to ground to assure stability and good transient performance. See Input and Output Capacitor Requirements in the <i>Application Information</i> section for more details.
GND	2	—	Ground pin
NC	4	—	No internal connection. This pin can be tied to ground to improve thermal dissipation.
OUT	5	O	Regulated output voltage pin. A small 1- μ F ceramic capacitor is needed from this pin to ground to assure stability. See Input and Output Capacitor Requirements in the <i>Application Information</i> section for more details.

6 Specifications

6.1 Absolute Maximum Ratings

At $T_A = -40^\circ\text{C}$ to 125°C (unless otherwise noted). All voltages are with respect to GND.⁽¹⁾

		MIN	MAX	UNIT
V_{IN}	Input voltage	-0.3	6	V
V_{EN}	Enable voltage	-0.3	6	V
V_{OUT}	Output voltage	-0.3	6	V
I_{OUT}	Maximum output current	Internally limited		
	Output short-circuit duration	Indefinite		
T_J	Operating ambient temperature	-40	150	$^\circ\text{C}$
T_{stg}	Storage temperature	-55	150	$^\circ\text{C}$

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per AEC Q100-002 ⁽¹⁾	V
		Charged-device model (CDM), per AEC Q100-011	

- (1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V_{IN}	Input supply-voltage range	2		5.5	V
V_{OUT}	Output voltage	1.2		4.8	V
I_{OUT}	Output current	0		200	mA
V_{EN}	Voltage on EN pin	0		V_{IN}	V
T_A	Operating ambient temperature	–40		125	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TLV700xx-Q1		UNIT
		DCK (SOT)	DDC (SOT)	
		5 Pins	5 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	307.6	262.8	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	79.1	68.2	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	93.7	81.6	°C/W
ψ_{JT}	Junction-to-top characterization parameter	1.3	1.1	°C/W
ψ_{JB}	Junction-to-board characterization parameter	92.8	80.9	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	n/a	n/a	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

6.5 Electrical Characteristics

$V_{IN} = V_{OUT(TYP)} + 0.3$ V or 2 V (whichever is greater); $I_{OUT} = 10$ mA, $V_{EN} = V_{IN}$, $C_{OUT} = 1$ μ F, and $T_A = -40^\circ\text{C}$ to 125°C (unless otherwise noted). Typical values are at $T_A = 25^\circ\text{C}$.

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{OUT} DC output accuracy	$-40^\circ\text{C} \leq T_A \leq 125^\circ\text{C}$	$V_{OUT} \geq 1$ V	–2%	2%	
		$V_{OUT} < 1$ V	–20	20	mV
$\Delta V_O / \Delta V_{IN}$ Line regulation	$V_{OUT(NOM)} + 0.5$ V $\leq V_{IN} \leq 5.5$ V $I_{OUT} = 10$ mA		1	5	mV
$\Delta V_O / \Delta I_{OUT}$ Load regulation	0 mA $\leq I_{OUT} \leq 200$ mA, TLV70025-Q1 TLV70030-Q1, TLV70033-Q1			15	mV
	0 mA $\leq I_{OUT} \leq 200$ mA, TLV70012A-Q1			20	
V_{DO} Dropout voltage ⁽¹⁾	$V_{IN} = 0.98 \times V_{OUT(NOM)}$, $I_{OUT} = 200$ mA		175	250	mV
I_{CL} Output current limit	$V_{OUT} = 0.9 \times V_{OUT(NOM)}$	220	350	550	mA
I_{GND} Ground pin current	$I_{OUT} = 0$ mA		31	55	μ A
	$I_{OUT} = 200$ mA, $V_{IN} = V_{OUT} + 0.5$ V		270		μ A
I_{SHDN} Ground pin current (shutdown)	$V_{EN} \leq 0.4$ V, 2 V $\leq V_{IN} \leq 4.5$ V		1	2.5	μ A
PSRR Power-supply rejection ratio	$V_{IN} = 2.3$ V, $V_{OUT} = 1.8$ V $I_{OUT} = 10$ mA, $f = 1$ kHz		68		dB
V_N Output noise voltage	BW = 100 Hz to 100 kHz $V_{IN} = 2.3$ V, $V_{OUT} = 1.8$ V, $I_{OUT} = 10$ mA		48		μ V _{RMS}
t_{STR} Startup time ⁽²⁾	$C_{OUT} = 1$ μ F, $I_{OUT} = 200$ mA		100		μ s
$V_{EN(HI)}$ Enable pin high (enabled)		0.9		V_{IN}	V
$V_{EN(LO)}$ Enable pin low (disabled)		0		0.4	V
I_{EN} Enable pin current	$V_{EN} = 5.5$ V, $I_{OUT} = 10$ μ A		0.04	0.5	μ A
UVLO Undervoltage lockout	V_{IN} rising		1.9		V

(1) V_{DO} is measured for devices with $V_{OUT(NOM)} \geq 2.35$ V.

(2) Startup time = time from EN assertion to $0.98 \times V_{OUT(NOM)}$.

Electrical Characteristics (continued)

$V_{IN} = V_{OUT(TYP)} + 0.3\text{ V}$ or 2 V (whichever is greater); $I_{OUT} = 10\text{ mA}$, $V_{EN} = V_{IN}$, $C_{OUT} = 1\text{ }\mu\text{F}$, and $T_A = -40^{\circ}\text{C}$ to 125°C (unless otherwise noted). Typical values are at $T_A = 25^{\circ}\text{C}$.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
T_{SD}	Thermal shutdown temperature	Shutdown, temperature increasing		160		$^{\circ}\text{C}$
		Reset, temperature decreasing		140		$^{\circ}\text{C}$
T_A	Operating ambient temperature		-40		125	$^{\circ}\text{C}$

6.6 Typical Characteristics

$T_J = -40^{\circ}\text{C}$ to 125°C , $V_{IN} = V_{OUT(TYP)} + 0.5\text{ V}$ or 2 V (whichever is greater); $I_{OUT} = 10\text{ mA}$, $V_{EN} = V_{IN}$, $C_{OUT} = 1\text{ }\mu\text{F}$ (unless otherwise noted). Typical values are at $T_J = 25^{\circ}\text{C}$.

7 Detailed Description

7.1 Overview

The TLV700xx-Q1 low-dropout (LDO) linear regulators are low-quiescent-current devices with excellent line- and load-transient performance. These LDOs are designed for power-sensitive applications. A precision band-gap and error amplifier provides overall 2% accuracy together with low output noise, very high power-supply rejection ratio (PSRR), and low dropout voltage.

7.2 Functional Block Diagram

Copyright © 2016, Texas Instruments Incorporated

7.3 Feature Description

7.3.1 Internal Current Limit

The TLV700xx-Q1 internal current limit helps to protect the regulator during fault conditions. During current limit, the output sources a fixed amount of current that is largely independent of the output voltage. In such a case, the output voltage is not regulated, and is $V_{OUT} = I_{LIMIT} \times R_{LOAD}$. The PMOS pass transistor dissipates $(V_{IN} - V_{OUT}) \times I_{LIMIT}$ until thermal shutdown is triggered and the device turns off. As the device cools down, it is turned on by the internal thermal-shutdown circuit. If the fault condition continues, the device cycles between current limit and thermal shutdown. See the [Thermal Information](#) section for more details.

The PMOS pass element in the TLV700xx-Q1 has a built-in body diode that conducts current when the voltage at OUT exceeds the voltage at IN. This current is not limited, so if extended reverse voltage operation is anticipated, external limiting to 5% of the rated output current is recommended.

7.3.2 Shutdown

The enable pin (EN) is active-high and is compatible with standard and low-voltage TTL-CMOS levels. When shutdown capability is not required, EN can be connected to the IN pin.

Feature Description (continued)

7.3.3 Dropout Voltage

The TLV700xx-Q1 uses a PMOS pass transistor to achieve low dropout. When $(V_{IN} - V_{OUT})$ is less than the dropout voltage (V_{DO}), the PMOS pass device is in the linear region of operation and the input-to-output resistance is the $r_{DS(on)}$ of the PMOS pass element. V_{DO} scales approximately with output current because the PMOS device behaves as a resistor in dropout.

As with any linear regulator, PSRR and transient response are degraded as $(V_{IN} - V_{OUT})$ approaches dropout. This effect is shown in [Figure 13](#) in the *Typical Characteristics* section.

7.3.4 Undervoltage Lockout (UVLO)

The TLV700xx-Q1 uses an undervoltage lockout circuit to keep the output shut off until internal circuitry is operating properly.

7.4 Device Functional Modes

7.4.1 Operation With V_{IN} Less than 2 V

The TLV700xx-Q1 family of devices operates with input voltages above 2 V. The typical UVLO voltage is 1.9 V, and the device operates at an input voltage above 2 V. When input voltage falls below the UVLO voltage, the device shuts down.

7.4.2 Operation With V_{IN} Greater than 2 V

When V_{IN} is greater than 2 V, if the input voltage is higher than the desired output voltage plus dropout voltage, the output voltage is equal to the desired value. Otherwise, output voltage is V_{IN} minus the dropout voltage.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The TLV700xx-Q1 belongs to a new family of next-generation value LDO regulators. The device consumes low quiescent current and delivers excellent line and load transient performance. These characteristics, combined with low noise, very good PSRR with little ($V_{IN} - V_{OUT}$) headroom, make this device ideal for RF portable applications. This family of regulators offers subband-gap output voltages down to 0.7 V, current limit, and thermal protection, and is specified from -40°C to 125°C .

8.1.1 Input and Output Capacitor Requirements

Recommended capacitors are 1.0- μF X5R- and X7R-type ceramic because these capacitors have minimal variation in value and equivalent series resistance (ESR) over temperature.

However, the TLV700xx-Q1 is designed to be stable with an *effective capacitance* of 0.1 μF or larger at the output. Thus, the device is stable with capacitors of other dielectric types as well, as long as the effective capacitance under operating bias voltage and temperature is greater than 0.1 μF . This effective capacitance refers to the capacitance that the LDO sees under operating bias voltage and temperature conditions; that is, the capacitance after taking both bias voltage and temperature derating into consideration. In addition to allowing the use of cheaper dielectrics, this capability of being stable with 0.1- μF effective capacitance also enables the use of smaller-footprint capacitors that have higher derating in size- and space-constrained applications.

Note that using a 0.1- μF rated capacitor at the output of the LDO does not ensure stability because the effective capacitance under the specified operating conditions would be less than 0.1 μF . Maximum ESR should be less than 200 m Ω .

Although an input capacitor is not required for stability, it is good analog design practice to connect a 0.1- μF to 1- μF , low-ESR capacitor across the IN pin and GND in of the regulator. This capacitor counteracts reactive input sources and improves transient response, noise rejection, and ripple rejection. A higher-value capacitor may be necessary if large, fast-rise-time load transients are anticipated, or if the device is not located close to the power source. If source impedance is more than 2 Ω , a 0.1- μF input capacitor may be necessary to ensure stability.

High-ESR capacitors may degrade PSRR performance.

8.1.2 Transient Response

As with any regulator, increasing the size of the output capacitor reduces over- and undershoot magnitude but increases the duration of the transient response.

8.1.3 Thermal Information

Thermal protection disables the output when the junction temperature rises to approximately 160°C , allowing the device to cool. When the junction temperature cools to approximately 140°C , the output circuitry is again enabled. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This cycling limits the dissipation of the regulator, protecting it from damage as a result of overheating.

Any tendency to activate the thermal protection circuit indicates excessive power dissipation or an inadequate heatsink. For reliable operation, junction temperature should be limited to 125°C maximum. To estimate the margin of safety in a complete design (including heatsink), increase the ambient temperature until the thermal protection is triggered; use worst-case loads and signal conditions. For good reliability, thermal protection should trigger at least 35°C above the maximum expected ambient condition of the particular application. This configuration produces a worst-case junction temperature of 125°C at the highest expected ambient temperature and worst-case load.

Application Information (continued)

The internal protection circuitry of the TLV700xx-Q1 has been designed to protect against overload conditions. It was not intended to replace proper heatsinking. Continuously running the TLV700xx-Q1 into thermal shutdown degrades device reliability.

8.2 Typical Application

The TLV700xx-Q1 devices are 200-mA, low quiescent current, low noise, high PSRR, fast-start-up LDO linear regulators with excellent line and load transient response. The TLV700xxEVM-503 evaluation module (EVM) helps designers evaluate the operation and performance of the TLV700xx-Q1 family.

Figure 22 shows a typical application for the TLV70033-Q1 device.

Copyright © 2016, Texas Instruments Incorporated

Figure 22. TLV70033-Q1 Typical Application

8.2.1 Design Requirements

Table 1 shows example design parameters and values for this typical application.

Table 1. Design Parameters

PARAMETER	VALUE
Input voltage range	2 V to 5.5 V
Output voltage	1.2 V, 2.5 V, 3 V, 3.3 V
Output current rating	200 mA
Effective output capacitor range	>0.1 µF
Maximum output capacitor ESR range	<200 mΩ

8.2.2 Detailed Design Procedure

8.2.2.1 Input Capacitance

Although not required for stability, connecting a 0.1-µF to 1-µF low-ESR capacitor across the IN pin and GND in the regulator is good analog design practice.

8.2.2.2 Output Capacitance

Effect capacitance of 0.1 µF or larger is required to ensure stable operation. The maximum ESR must be less than 200 mΩ.

8.2.2.3 Thermal Calculation

See Equation 1 for thermal calculation.

$$P_D = I_{OUT} \times (V_{IN} - V_{OUT}) + I_Q \times V_{IN} \quad (1)$$

where:

- P_D = continuous power dissipation

- I_{OUT} = output current
- V_{IN} = input voltage
- V_{OUT} = output voltage
- Because $I_Q \ll I_{OUT}$, the term $I_Q \times V_{IN}$ is always ignored.

For a device under operation at a given ambient air temperature (T_A), use Equation 2 to calculate the junction temperature (T_J).

$$T_J = T_A + (R_{\theta JA} \times P_D) \quad (2)$$

where:

- $R_{\theta JA}$ = junction-to-ambient air thermal impedance

Use Equation 3 to calculate the rise in junction temperature because of power dissipation.

$$\Delta T = T_J - T_A = (R_{\theta JA} \times P_D) \quad (3)$$

For a given maximum junction temperature (T_{Jmax}), use Equation 4 to calculate the maximum ambient air temperature (T_{Amax}) at which the device can operate.

$$T_{Amax} = T_{Jmax} - (R_{\theta JA} \times P_D) \quad (4)$$

8.2.3 Application Curve

Figure 23. Power Up

9 Power Supply Recommendations

The device is designed to operate from an input-voltage supply range between 2 V and 5.5 V. This input supply must be well regulated. If the input supply is located more than a few inches from the TPS7B69xx-Q1 device, TI recommends adding a capacitor with a value of 0.1 μ F and a ceramic bypass capacitor at the input.

10 Layout

10.1 Layout Guidelines

When laying out the board for the TLV700xx-Q1, TI recommends that the board be designed with separate ground planes for V_{IN} and V_{OUT} which are only connected at the GND pin of the device. Input and output capacitors should be placed as close to the device pins as possible. Also, the ground connection for the bypass capacitor must be connected directly to the GND pin of the device. Improve the PSRR output noise, and transient-response performance of the TLV700xx-Q1 by following these layout guidelines.

10.2 Layout Example

Figure 24. TLV700xx-Q1 Layout Example

TLV70012QDCKRQ1.B	Active	Production	SC70 (DCK) 5	3000 LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 125	SDX
TLV70030QDCKRQ1	Active	Production	SC70 (DCK) 5	3000 LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 125	SDW
TLV70030QDCKRQ1.B	Active	Production	SC70 (DCK) 5	3000 LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 125	SDW

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
TLV70012QDCKRQ1	SC70	DCK	5	3000	178.0	9.0	2.4	2.5	1.2	4.0	8.0	Q3

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
TLV70012QDCKRQ1	SC70	DCK	5	3000	180.0	180.0	18.0

4214834/G 11/2024

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC MO-203.
4. Support pin may differ or may not be present.
5. Lead width does not comply with JEDEC.
6. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25mm per side

4214834/G 11/2024

NOTES: (continued)

7. Publication IPC-7351 may have alternate designs.
8. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SOLDER PASTE EXAMPLE
BASED ON 0.125 THICK STENCIL
SCALE:18X

4214834/G 11/2024

NOTES: (continued)

9. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
10. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](https://www.ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
