

TMUXHS221LV USB 2.0 480Mbps 2:1 または 1:2 マルチプレクサ / デマルチプレクサ・スイッチ

1 特長

- USB 2.0 および eUSB2 LS、FS、HS 物理層と互換
- 最大 3Gbps の差動信号をサポートするスイッチ
- 最大 3.3V のほとんどの CMOS 信号をサポートできるアナログ・スイッチ
- 5V 耐圧のデータ・ピン
- 低 RON : 3Ω ($V_{IO} = 0V$ 時)
- 高帯域幅 : 3.3GHz (-3dB BW)
- USB 2.0 または eUSB2 HS 信号に最適 (240MHz 時) :
 - 挿入損失 = -0.4dB
 - 反射損失 = -22dB
 - オフ・アイソレーション / クロストーク = -32dB
- 垂直および水平方向の USB 2.0 HS アイ開口の劣化を最小化
- 電源電圧 : 1.8V
- 制御ロジック入力 : 1.2 または 1.8V
- 拡張産業用温度範囲 : -40°C ~ 125°C
- 小型の 10 ピン、1.8mm × 1.4mm、UQFN パッケージ
- 複数のソースとピンおよび BOM 互換

2 アプリケーション

- PC とノート PC
- ゲーム、TV、ホーム・シアター、およびエンターテインメント
- データ・センターおよびエンタープライズ・コンピューティング
- 医療用アプリケーション
- 試験および測定機器
- ファクトリ・オートメーションおよび制御
- 携帯電話およびタブレット

3 概要

TMUXHS221LV は、USB 2.0 および eUSB2 LS、FS、HS 信号伝達用に最適化された高速双方向 2 : 1/1 : 2 マルチプレクサ / デマルチプレクサです。TMUXHS221LV は、最大 3Gbps のデータ・レートに対応する多くの高速インターフェイスに適したアナログ・パッシブ・スイッチです。TMUXHS221LV は、-0.3 ~ 3.6V の電圧範囲の差動またはシングルエンド CMOS 信号処理をサポートしています。

TMUXHS221LV の優れた高速性能と、非常に低いチャネル・オン抵抗、高帯域幅、低反射、低付加ジッタは、USB 2.0 または eUSB2 HS 信号アイ・ダイアグラムのアイ開口の劣化を最小限に抑えます。本デバイスは、USB 2.0 HS 電氣的コンプライアンスの合格を容易にする理想的な高周波応答が得られるように最適化されています。また、内部ペア・スキュー性能を最大限に高めるため、本デバイスのデータ経路は整合されています。

TMUXHS221LV は、産業用および高信頼性向けケースなどの各種の堅牢なアプリケーションに適した拡張温度範囲で動作します。

パッケージ情報

5 Pin Configuration and Functions

图 5-1. TMUXHS221LV NKG Package, 10-Pin UQFN (Top View)

表 5-1. Pin Functions

PIN		TYPE ⁽¹⁾	DESCRIPTION
NAME	NO.		
D+	1	I/O	Data signals Common Port, positive
D-	2	I/O	Data signals Common Port, negative
DA+	5	I/O	Data signals Port A, positive
DA-	4	I/O	Data signals Port A, negative
DB+	7	I/O	Data signals Port B, positive
DB-	6	I/O	Data signals Port B, negative
SEL	10	IN	Switch control configuration signal as provided in 表 7-1.
OEn	8	IN	
VCC	9	P	1.8 V power supply
GND	3	G	Ground

(1) IN = input, I/O = input or output, P = power, G = ground

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{CC-ABSMAX}	Supply voltage	−0.5	2.4	V
V _{I/O-ABSMAX}	Voltage	−0.5	5.5	V
V _{IN-ABSMAX}	Voltage	−0.5	4	V
I _{I/O-ABSMAX}	ON-state switch current		100	mA
T _{J-ABSMAX}	Junction temperature	−40	125	°C
T _{STG}	Storage temperature	−65	150	°C

- (1) Operation outside the *Absolute Maximum Rating* may cause permanent device damage. *Absolute Maximum Rating* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Condition*. If used outside the *Recommended Operating Condition* but within the *Absolute Maximum Rating*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

6.2 ESD Ratings

		VALUE	UNIT
V _{ESD}	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±5000
		Charged device model (CDM), per ANSI/ESDA/JEDEC JS-002 ⁽²⁾	±1000

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	TYP	MAX	UNIT
V _{CC}	Supply voltage	DC plus AC power should not exceed these limits	1.62	1.8	1.98	V
V _{CCRAMP}	Supply voltage ramp time		0.1		100	ms
V _{I/O}	Voltage range for data signals (V _{I/O})	D, DA, DB	−0.3		3.6	V
V _{IN}	Voltage range for control signals (V _{IN})	OEn, SEL	−0.3		3.6	V
T _J	Junction temperature				125	°C
T _A	Operating free-air/ambient temperature		−40		125	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TMUXHS221LV	UNIT
		NKG (UQFN)	
		10 PINS	
R _{θJA}	Junction-to-ambient thermal resistance - High K	225.9	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	93.5	°C/W
R _{θJB}	Junction-to-board thermal resistance	147.5	°C/W
ψ _{JT}	Junction-to-top characterization parameter	3.4	°C/W
ψ _{JB}	Junction-to-board characterization parameter	147.1	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics

over operating free-air temperature and supply voltage range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
I _{CC}	Device active current	OEn = L		10	17	μA
I _{STDN}	Device shutdown current	OEn = H		0.5	3	μA
C _{ON}	Output ON capacitance to GND	OEn = L		1.4		pF
R _{ON}	Channel ON resistance	V _{I/O} = 0 V, I _O = –8 mA		3	5.4	Ω
		V _{I/O} = 2.4 V, I _O = –8 mA		3.9	8	Ω
R _{ON,FLAT}	Channel ON resistance flatness defined as difference of R _{ON} over input voltage range	V _{I/O} = 0 V and V _{I/O} = 2.4 V; I _O = –8 mA		1		Ω
ΔR _{ON}	On-resistance match between pairs for the same channel at same V _{I/O} , V _{CC} and T _A	V _{I/O} = 0 V; I _O = –8 mA		0.2		Ω
		V _{I/O} = 2.4 V; I _O = –8 mA		0.2		Ω
V _{IH}	Input high voltage, control pins (OEn, SEL)		0.9		3.6	V
V _{IL}	Input low voltage, control pins (OEn, SEL)		–0.3		0.25	
I _{IH,IN}	Input high current, control pins (OEn, SEL)	V _{IN} = 3.6 V			8	μA
I _{IL,IN}	Input low current, control pins (OEn, SEL)	V _{IN} = 0 V			0.2	μA
I _{I/O,H}	Input high current, data pins (Dx, DAx, DBx)	V _{I/O} = 3.6 V			5	μA
I _{I/O,L}	Input low current, data pins (Dx, DAx, DBx)	V _{I/O} = 0 V			0.2	μA
I _{HIZ,I/O}	Leakage current through turned off switch	OEn = H; V _{I/O} = 3.6 V			8	μA
I _{OFF,IN}	Failsafe leakage current for control pins (IN)	V _{CC} = 0 V, V _{IN} = 1.98 V			12	μA
I _{OFF,I/O}	Failsafe leakage current for data pins (I/O)	V _{CC} = 0 V, V _{I/O} = 3.6 V			12	μA

6.6 High-Speed Performance Parameters

PARAMETER		TEST CONDITION	MIN	TYP	MAX	UNIT
BW	–3-dB bandwidth	Relative to DC		3.3		GHz
I _L	Differential insertion loss	f = 10 MHz		–0.3		dB
		f = 240 MHz		–0.4		
R _L	Differential return loss	f = 10 MHz		–32		dB
		f = 240 MHz		–22		
O _{IRR}	Differential OFF isolation (D to DA/DB)	f = 10 MHz		–60		dB
		f = 240 MHz		–32		
XT	Single-Ended cross-talk (in between D+ and D- or DA+ and DA- or DB+ and DB-)	f = 10 MHz		–60		dB
		f = 240 MHz		–41		
XT _{diff}	Differential cross-talk (DA to DB or DB to DA)	f = 10 MHz		–64		dB
		f = 240 MHz		–32		

6.7 Switching Characteristics

over operating free-air temperature and supply voltage range (unless otherwise noted)

PARAMETER			MIN	TYP	MAX	UNIT
t _{PD}	Switch propagation delay			60	80	ps
t _{SW}	Switching time CTRL-to-Switch ON (SEL toggles in between H, L)	R _L = 50 Ω, C _L = 10 pF			1.5	μs
t _{OFF}	Time required for device ON-to-OFF transition (OEn = L to H)	R _L = 50 Ω, C _L = 10 pF			0.5	μs
t _{ON}	Time required for device OFF-to-ON transition (OEn = H to L)	R _L = 50 Ω, C _L = 10 pF			32	μs
t _{SK_INTRA}	Intra-pair output skew between positive and negative for same differential channel	For Dx to DAx or DBx channels		3	10	ps
t _{SK_INTER}	Inter-pair output skew between channels	For Dx to DAx or DBx channels		1	10	ps

6.8 Typical Characteristics – S-Parameters

Figure 6-1 and Figure 6-2 show differential insertion loss and return loss for a typical TMUXHS221LV channel, respectively. The excellent high-speed performance at 240 MHz results in minimal attenuation to the USB 2.0 or eUSB2 HS signal eye diagrams. Figure 6-3 shows differential crosstalk for a typical TMUXHS221LV channel. Note, the measurements provided are performed in TI evaluation board with board and equipment parasitics calibrated out.

Figure 6-1. Typical Differential Insertion Loss vs Frequency

Figure 6-2. Typical Differential Return Loss vs Frequency

Figure 6-3. Typical Differential Crosstalk vs Frequency

6.9 Typical Characteristics – R_{ON}

Figure 6-4, Figure 6-5, and Figure 6-6 show switch ON resistance R_{ON} versus common mode voltage VCM, supply voltage VCC, and ambient temperature respectively. All curves are at nominal PVT conditions unless specified.

Figure 6-4. R_{ON} vs Common Mode Voltage VCM

Figure 6-5. R_{ON} vs Supply Voltage VCC

Figure 6-6. R_{ON} vs Ambient Temperature

6.10 Typical Characteristics – Eye Diagrams

Figure 6-7 and Figure 6-8 show a side-by-side comparison of 480Mbps USB 2.0 HS signals through calibration traces (without the device) and a typical TMUXHS221LV channel. The attenuation of the vertical and horizontal eye opening through the device is minimal. Also, the mux device adds a negligible amount of jitter to the signals.

Figure 6-7. Through Calibration Traces at 480Mbps

Figure 6-8. Through a Typical TMUXHS221LV Channel at 480Mbps

Figure 6-9 and Figure 6-10 show a side-by-side eye diagram comparison at 3Gbps signals through calibration traces (without the device) and a typical TMUXHS221LV channel. Attenuation of the vertical and horizontal eye opening through the device is minimal. The mux device adds only a small amount of jitter at 3Gbps.

Figure 6-9. Through Calibration Traces at 3Gbps

Figure 6-10. Through a Typical TMUXHS221LV Channel at 3Gbps

7 Detailed Description

7.1 Overview

The TMUXHS221LV is an analog passive mux with 2:1 or 1:2 multiplexer or demultiplexer that can work for any low-speed, high-speed, differential or single-ended signals. The signals must be within the allowable voltage range of -0.3 to 3.6 V. The device is optimized for eUSB2 and USB 2.0 LS, FS, and HS signaling.

The dynamic characteristics of the device allow high-speed switching with minimal attenuation to the signal eye diagram and little added jitter. While the device is recommended for the interfaces up to 3Gbps, actual data rates where the device can be used highly depends on the electrical channels. For low loss channels where adequate margin is maintained, the device can potentially be used for higher data rates.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 Output Enable and Power Savings

The TMUXHS221LV has two power modes: active, or normal, operating mode and standby, or shutdown mode. During standby mode, the device consumes very little current to achieve ultra low power in systems where saving power is critical. To enter standby mode, OEn must be pulled high.

7.3.2 Data Line Biasing

The TMUXHS221LV does not contain any internal biasing. All channels of the device must be externally biased from either of the two sides to avoid floating channels.

7.4 Device Functional Modes

表 7-1. Mux Configuration Control Logic for TMUXHS221LV⁽¹⁾

SEL	OEn	Mux Configuration
L	L	D to DA
H	L	D to DB
X	H	All channels are disabled and Hi-Z

- (1) The TMUXHS221LV can tolerate polarity inversions. Ensure that the polarity consistency is maintained for all signals. However the device cannot change polarity from input to output.

8 Application and Implementation

注

以下のアプリケーション情報は、TI の製品仕様に含まれるものではなく、TI ではその正確性または完全性を保証いたしません。個々の目的に対する製品の適合性については、お客様の責任で判断していただくことになります。お客様は自身の設計実装を検証しテストすることで、システムの機能を確認する必要があります。

8.1 Application Information

The TMUXHS221LV is an analog high-speed mux/demux that can be used for routing differential as well as single ended CMOS signals through it. The device can be used for many high speed and low speed interfaces up to 3Gbps including the following:

- Universal Serial Bus (USB) 2.0 HS, FS, and LS
- Embedded Universal Serial Bus (eUSB) 2.0 HS, FS, and LS
- Inter-Integrated Circuit (I²C) Bus
- System Management Bus (SMBus™)
- Universal Asynchronous Receiver-Transmitter (UART™)
- Debug interface signals
- Mipi® Camera Serial Interface (CSI-2), Display Serial Interface (DSI)
- PCIe® clock
- DisplayPort™ Auxiliary and Hot Plug Detect Signals
- Universal Serial Bus Type C Sideband Use (USB-C™ SBU) signals
- Low Voltage Differential Signaling (LVDS)

An available GPIO pin of a controller or hard tie to voltage level H or L can easily control the mux or demux selection pin (SEL) of the device as an application requires.

Many interfaces require AC coupling the capacitors between the transmitter and receiver. The 0201 or 0402 capacitors are the preferred option, but other capacitors may be used depending on interface speed and signal integrity needs. If AC coupling capacitors are used on both sides of the TMUXHS221LV, then ensure the device is biased from either side, as there is no internal biasing to the device.

8.2 Typical Applications

8.2.1 Routing Debug Signals to USB Port

Many electronic end-equipment such as PCs, media players, point of sales registers, printers, cameras, headphones, smartphones, tablets, and so forth use USB ports (such as USB Type-A, USB Type-B, or USB Type-C™) for in-field or factory debug interface. In such use cases debug signals are routed to USB 2.0 pins of a USB port through a mux or demux device. TMUXHS221LV is a good fit for such use cases with its flexible data handling capability. TMUXHS221LV can handle virtually any debug interface signals as long as they are limited to -0.3 V (minimum) to 3.6 V (maximum). The device also provides very low attenuation to both USB 2.0 and debug signals with its very low channel ON resistance, high bandwidth, and low reflection.

✎ 8-1 shows a system implementation where USB 2.0 signals are multiplexed with debug interface signals into DP/DM wires of a USB port.

图 8-1. Routing Debug Signals to USB Port

8.2.1.1 Design Requirements

表 8-1 provides various parameters and their expected values to implement the routing debug signals into the USB port. Note that the recommendation is for illustration purpose only.

表 8-1. Design Parameters

DESIGN PARAMETER	VALUE
DA+, DA-, DB+, and DB-	Direct connect to processors, -0.3 – 3.6 V
SEL/OEn pin maximum voltage for low	0.4 V
SEL/OEn pin minimum voltage for high	1.4 V
Decoupling capacitor for VCC	0.1 µF and 1 µF

8.2.1.2 Detailed Design Procedure

Signal integrity is important because as a passive switch, the device provides no signal conditioning capability.

- Determine the loss profile between circuits that are to be muxed or demuxed.
- Provide clean impedance and electrical length matched board traces.
- Provide a control signal for the SEL and OEn pins.
- Provide good ground connection to the board ground plane.
- See the application schematics for the recommended decoupling capacitors from VCC pins to ground.

8.2.1.3 Application Curves

Figure 8-2 and Figure 8-3 show eye diagrams for USB 2.0 signals through calibration traces (without device) and TMUXHS221LV channel. A combination of very low channel ON resistance, high bandwidth, very low reflection (return loss), and low added jitter from the device allows 480Mbps USB 2.0 HS signals to remain unattenuated. Many system platforms struggle to pass USB 2.0 compliance due to high loss. TMUXHS221LV allows insertion of an analog mux device in the signal path without creating any additional signal integrity issues.

Figure 8-2. USB 2.0 HS Compliance Eye in TI Evaluation Board – Through Calibration Traces

Figure 8-3. USB 2.0 HS Compliance Eye in TI Evaluation Board – Through TMUXHS221LV Channel

8.2.2 Systems Examples

8.2.2.1 PCIe Clock Muxing

Figure 8-4 shows an application where TMUXHS221LV is used to switch the PCIe clock. The device is measured in a TI evaluation board with an available clock source to show an added jitter less than 10 fs for all NOISE_FOLD and PCIe 5.0 CK filter versions, which is well below PCIe 5.0 clock specifications.

Figure 8-4. PCIe Clock Muxing

8.2.2.2 USB-C SBU Muxing

Figure 8-5 shows an application block diagram that implements SBU cross-muxing in a USB Type-C interface for implementing DisplayPort (DP) Alternate mode using the TMUXHS221LV. Note that the device has adequate bandwidth to support fast Auxiliary (AUX) signals. It is also capable of handling asymmetric biasing for DP AUX signals.

Figure 8-5. USB Type-C SBU Signals Muxing

8.2.2.3 Switching USB Port

Figure 8-6 shows an application block diagram where TMUXHS221LV is used to switch the USB port in between a hand-held portable device and its connected dock.

Figure 8-6. Switching USB Port

8.3 Power Supply Recommendations

The TMUXHS221LV does not require a power supply sequence. However, TI recommends to enable the device after VCC is stable and within specification. TI also recommends to place ample decoupling capacitors at the device VCC near the pin.

8.4 Layout

8.4.1 Layout Guidelines

A high-speed USB connection is made through a shielded, twisted pair cable with a differential characteristic impedance. In the layout, the impedance of D+ and D– traces should match the cable characteristic differential impedance for optimal performance. The high-speed D+/D– traces should always be matched and must be no more than 4 inches, otherwise the eye diagram performance may be degraded.

- Place supply bypass capacitors as close to the VCC pin as possible.
- Avoid placing the bypass capacitors near the D+/D– traces.
- Route the high-speed USB signals using a minimum of vias and corners which will reduce signal reflections and impedance changes. Each via introduces discontinuities in the signal's transmission line and increases the chance of picking up interference from the other layers of the board. When a via must be used, increase the clearance size around it to minimize its capacitance.
- Be careful when designing test points on twisted pair lines; through-hole pins are not recommended.
- When it becomes necessary to turn 90°, use two 45° turns or an arc instead of making a single 90° turn. This reduces reflections on the signal traces by minimizing impedance discontinuities.
- Do not route USB traces under or near crystals, oscillators, clock signal generators, switching regulators, mounting holes, magnetic devices, or ICs that use or duplicate clock signals.
- Avoid stubs on the high-speed USB signals because they cause signal reflections. If a stub is unavoidable, then the stub should be less than 200 mm.
- Route all high-speed USB signal traces over continuous planes (VCC or GND) with no interruptions.
- Avoid crossing over anti-etch, commonly found with plane split.

For high speed layout guidelines, refer to [High-Speed Layout Guidelines for Signal Conditioners and USB Hubs application note](#).

8.4.2 Layout Example

Figure 8-7 shows a TMUXHS221LV layout example.

Figure 8-7. TMUXHS221LV Layout Example

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

4228479/A 02/2022

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This package complies to JEDEC MO-288 variation UDEE, except minimum package height.

NKG0010A

UQFN - 0.55 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE: 30X

4228479/A 02/2022

NOTES: (continued)

4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slua271).
5. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.

EXAMPLE STENCIL DESIGN

NKG0010A

UQFN - 0.55 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

SOLDER PASTE EXAMPLE
BASED ON 0.1 MM THICK STENCIL
SCALE: 30X

4228479/A 02/2022

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
