

TPL0501 256 タップ、シングル・チャンネル、SPI インターフェイス搭載 デジタル・ポテンショメータ

1 特長

- シングル・チャンネル、256 ポジションの分解能
- エンド・ツー・エンド抵抗値 100kΩ のオプション
- 低温度ドリフト係数：35ppm/°C
- SPI 互換のシリアル・インターフェイス
- 2.7V～5.5V の単一電源で動作
- 抵抗誤差：±20%
- 動作温度範囲：-40°C～+125°C
- ESD 性能は JESD 22 に準拠しテスト済み
– 人体モデルで 2000V (A114-B、クラス II)

2 アプリケーション

- パルス・オキシメータ (血中酸素飽和度計)
- 水道メーター
- カメラ
- 医療用センサ・パッチ
- ビルのセキュリティ・ゲートウェイ

3 概要

TPL0501 は、256 のワイパー位置を有するシングル・チャンネル、リニア・テーパ・デジタル・ポテンショメータです。このデバイスは、3 端子のポテンショメータまたは 2 端子の可変抵抗器として使用できます。TPL0501 には現在、100 kΩ のエンド・ツー・エンド抵抗が付いています。TPL0501 の内部抵抗には、SPI 互換インターフェイスを使用してアクセスできます。TPL0501 の公称温度係数は 35ppm/°C です。

TPL0501 は 8 ピンの SOT-23 および 8 ピンの UQFN パッケージで供給され、-40°C～+125°C の温度範囲で仕様が規定されています。

製品情報⁽¹⁾

型番	パッケージ	本体サイズ(公称)
TPL0501	UQFN (8)	1.50mm × 1.50mm
	SOT-23 (8)	1.63mm×2.90mm

(1) 利用可能なすべてのパッケージについては、このデータシートの末尾にあるパッケージ・オプションについての付録を参照してください。

• Added register map default value in Table 1	11
• Changed ratio to correct form in <i>Ideal Resistance Values</i> section and in Table 2; registers names for RWL and RHW were reversed.	12

5 Pin Configuration and Functions

Pin Functions

PIN			TYPE ⁽¹⁾	DESCRIPTION
NAME	SOT-23	UQFN		
CS	6	3	I	SPI chip select (active low)
DIN	5	2	I	SPI input
GND	3	4	G	Ground
H	8	1	I/O	High terminal
L	7	8	I/O	Low terminal
SCLK	4	5	I	SPI clock
VDD	2	7	P	Positive supply voltage
W	1	6	I/O	Wiper terminal

(1) G = Ground, I = Input, O = Output, P = Power

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾⁽²⁾⁽³⁾

		MIN	MAX	UNIT
Supply voltage	V _{DD} to GND	–0.3	7	V
	V _H , V _L , V _W	–0.3	V _{DD} + 0.3	
Pulse current, I _H , I _L , I _W			±20	mA
Continuous current, I _H , I _L , I _W (TPL0501-100)			±5	mA
Digital input voltage, V _I		–0.3	7	V
Operating temperature, T _j			125	°C
Storage temperature, T _{stg}		–65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum
- (3) All voltages are with respect to ground, unless otherwise specified.

6.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Thermal Information

THERMAL METRIC ⁽¹⁾		TPL0501		UNIT
		DCN (SOT-23)	RSE (UQFN)	
		8 PINS	8 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance ⁽²⁾	205.6	118.8	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	122.3	62.4	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	98.9	26.8	°C/W
ψ_{JT}	Junction-to-top characterization parameter	38.7	2.3	°C/W
ψ_{JB}	Junction-to-board characterization parameter	97.8	26.8	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	—	—	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics application report](#).

(2) The package thermal impedance is calculated in accordance with JESD 51-7.

6.4 Electrical Characteristics: Analog Specifications

typical values are specified at $V_{DD} = 5\text{ V}$ and operating temperature is 25°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
R_{TOTAL}	End-to-end resistance	Between Hi and Li terminals	80	100	120	k Ω

7 Detailed Description

7.1 Overview

The TPL0501 has a single linear-taper digital potentiometer with 256 wiper positions and an end-to-end resistance of 100 k Ω . The potentiometer can be used as a three-terminal potentiometer or as a two-terminal rheostat. The potentiometer can be used in either voltage divider mode or rheostat mode.

The high (H) and low (L) terminals of the TPL0501 are equivalent to the fixed terminals of a mechanical potentiometer. The H and L terminals do not have any polarity restrictions (H can be at a higher voltage than L, or L can be at a higher voltage than H). The position of the wiper (W) terminal is controlled by the value in the 8-bit Wiper Resistance (WR) register. When the WR register contains all zeroes (zero-scale), the wiper terminal is closest to its L terminal. As the value of the WR register increases from all zeroes to all ones (full-scale), the wiper moves from the position closest to the L terminal, to the position closest to the H terminal. At the same time, the resistance between W and L increases, whereas the resistance between W and H decreases.

7.2 Functional Block Diagram

Copyright © 2016, Texas Instruments Incorporated

7.3 Feature Description

7.3.1 Single-Channel, 256-Position Resolution

The TPL0501 features a single independent DPOT. The DPOT is capable of being used and controlled independently.

7.4 Device Functional Modes

7.4.1 Voltage Divider Mode

The digital potentiometer generates a voltage divider when all three terminals are used. The voltage divider at wiper-to-H and wiper-to-L is proportional to the input voltage at H to L (see [Figure 12](#)).

Figure 12. Equivalent Circuit for Voltage Divider Mode

For example, connecting terminal H to 5 V and terminal L to ground, the output voltage at terminal W can range from 0 V to 5 V (see [Equation 1](#)).

$$V_W = V_{WL} = (V_H - V_L) \times \frac{D}{256} \quad (1)$$

The voltage difference between terminal H and terminal W can also be calculated in [Equation 2](#).

$$V_{HW} = (V_H - V_L) \times \left(1 - \left(\frac{D}{256}\right)\right)$$

where

- D is the decimal value of the wiper code. (2)

7.4.2 Rheostat Mode

The TPL0501 operates in rheostat mode when only two terminals are used as a variable resistor. The variable resistance can either be between terminal H and terminal W or between terminal L and terminal W. The unused terminal can be left floating or it can be tied to terminal W. The nominal resistance between terminal H and terminal L is 10 kΩ and has 256 tap points accessed by the wiper terminal. The 8-bit volatile register value is used to determine one of the 256 possible wiper positions.

To set the resistance between terminal H and terminal W in rheostat mode, the potentiometer can be configured in two possible ways (see [Figure 13](#)).

Figure 13. Equivalent Circuit for Rheostat Mode With Terminal H to Terminal W Resistance

Device Functional Modes (continued)

The general equation for determining the digitally programmed output resistance between Terminal H and Terminal W is [Equation 3](#):

$$R_{HW} = R_{TOT} \times \left(1 - \left(\frac{D}{256} \right) \right)$$

where

- R_{TOT} is the end-to-end resistance between terminal H and terminal L.
 - D is the decimal value of the wiper code
- (3)

Similarly, to set the resistance between terminal L and terminal W, the potentiometer can be configured in two possible ways.

Figure 14. Equivalent Circuit for Rheostat Mode With Terminal L to Terminal W Resistance

The general equation for determining the digitally programmed output resistance between terminal L and terminal W is [Equation 4](#):

$$R_{WL} = R_{TOT} \times \frac{D}{256}$$

where

- R_{TOT} is the end-to-end resistance between terminal H and terminal L
 - D is the decimal value of the wiper code.
- (4)

7.5 Programming

7.5.1 SPI Digital Interface

The TPL0501 uses a 3-wire SPI compatible serial data interface. This write-only interface has three inputs: chip-select ($\overline{\text{CS}}$), data clock (SCLK), and data input (DIN). Drive $\overline{\text{CS}}$ low to enable the serial interface and clock data synchronously into the shift register on each SCLK rising edge. After loading data into the shift register, drive $\overline{\text{CS}}$ high to latch the data into the appropriate potentiometer control register and disable the serial interface. Keep $\overline{\text{CS}}$ low during the entire serial data stream to avoid corruption of the data.

7.5.2 Ideal Resistance Values

Figure 17. Digital Potentiometer Measurements

Table 2 shows the ideal values for DPOT with end-to-end resistance of 100 kΩ. The absolute values of resistance can vary significantly but the Ratio (R_{WL}/R_{HW}) is extremely accurate.

Table 2. DPOT Ideal Values

STEP	BINARY	100 kΩ		R_{WL}/R_{HW}

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

Many applications require using a digital potentiometer such as the TPL0501 for variable resistance or voltage division. [Typical Application](#) shows one of these examples. In conjunction with various amplifiers, the TPL0501 can effectively be used in rheostat mode to modify the gain of an amplifier in voltage divider mode to create a digital-to-analog converter (DAC).

8.2 Typical Application

[Figure 18](#) shows a DAC.

Copyright © 2016, Texas Instruments Incorporated

Figure 18. DAC Schematic

8.2.1 Design Requirements

[Table 3](#) lists the design parameters for this application.

Table 3. Example Parameters

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage	0 V to 5 V
Output voltage	0 V to 5 V

8.2.2 Detailed Design Procedure

The TPL0501 can be used in voltage divider mode with a unity-gain operational amplifier buffer to create an 8-bit DAC. The analog output voltage of the circuit is determined by the wiper setting programmed through the SPI Interface.

The operational amplifier is required to buffer the high-impedance output of the TPL0501 or else loading placed on the output of the voltage divider affects the output voltage.

8.2.3 Application Curve

The voltage at terminal H determines the maximum analog voltage at the output. As the TPL0501 moves from zero-scale to full-scale, the voltage divider adjusts with relation to the voltage divider formula (see [Figure 12](#)), resulting in the desired voltage at terminal W. The voltage at terminal W ranges linearly from 0 V to the terminal H voltage. In this example, V_{IN} at terminal H is 5 V and 2.7 V.

Figure 19. TPL0501 Digital Input vs OPA320 Analog Output (DAC)

9 Power Supply Recommendations

9.1 Power Sequence

Protection diodes limit the voltage compliance at terminal H, terminal L, and terminal W, making it important to power up V_{DD} first before applying any voltage to terminal H, terminal L, and terminal W. The diodes are forward-biasing, meaning V_{DD} is not powered first. The ideal power up sequence is V_{DD} , digital inputs, and V_H , V_L , and V_W . The order of powering digital inputs, V_H , V_L , and V_W does not matter as long as they are powered after V_{DD} .

9.2 Wiper Position Upon Power Up

It is prudent to know that when DPOT is powered off, the impedance of the device is not known. Upon power up, the device will return to 0x80h code because this device does not contain non-volatile memory.

10 Layout

10.1 Layout Guidelines

To maintain reliability of the device, follow common printed-circuit board (PCB) layout guidelines.

- Leads to the input must be as direct as possible with a minimum conductor length.
- The ground path must have low resistance and low inductance.
- Use short trace-lengths to avoid excessive loading.
- It is common to have a dedicated ground plane on an inner layer of the board.
- Terminals that are connected to ground must have a low-impedance path to the ground plane in the form of wide polygon pours and multiple vias.
- Use bypass capacitors on power supplies and placed them as close as possible to the V_{DD} pin.
- Apply low equivalent series resistance (0.1- μ F to 10- μ F tantalum or electrolytic capacitors) at the supplies to minimize transient disturbances and to filter low frequency ripple.

10.2 Layout Example

Figure 20. Example Layout for DCN Package

11 デバイスおよびドキュメントのサポート

11.1 ドキュメントの更新通知を受け取る方法

ドキュメントの更新についての通知を受け取るには、ti.comのデバイス製品フォルダを開いてください。右上の「アラートを受け取る」をクリックして登録すると、変更されたすべての製品情報に関するダイジェストを毎週受け取れます。変更の詳細については、修正されたドキュメントに含まれている改訂履歴をご覧ください。

11.2 サポート・リソース

TI E2E™ [support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

DCN (R-PDSO-G8)

PLASTIC SMALL-OUTLINE PACKAGE (DIE DOWN)

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Package outline exclusive of metal burr & dambar protrusion/intrusion.
 - D. Package outline inclusive of solder plating.
 - E. A visual index feature must be located within the Pin 1 index area.
 - F. Falls within JEDEC MO-178 Variation BA.
 - G. Body dimensions do not include flash or protrusion. Mold flash and protrusion shall not exceed 0.25 per side.

DCN (R-PDSO-G8)

PLASTIC SMALL-OUTLINE PACKAGE (DIE DOWN)

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

PACKAGE OUTLINE

UQFN - 0.6 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

4220323/B 03/2018

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.

EXAMPLE BOARD LAYOUT

RSE0008A

UQFN - 0.6 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

LAND PATTERN EXAMPLE
SCALE:30X

SOLDER MASK DETAILS
NOT TO SCALE
