

TPL7407LA 30V、7チャンネルのローサイド・ドライバ

1 特長

- 600mAの定格ドレイン電流(チャンネルごと)
- 7チャンネル・ダーリントン・アレイ(例: ULN2003A)に対するピン互換のCMOS代替品
- 高い電力効率(非常に低い V_{OL})
 - ダーリントン・アレイと比べて100mAで1/4以下の V_{OL}
- 非常に低い出力リーク: チャンネルごとに10nA未満
- 拡張周囲温度範囲: $T_A = -40^{\circ}\text{C} \sim +125^{\circ}\text{C}$
- 高い電圧出力: 30V
- 1.8V~5Vのマイクロコントローラおよびロジック・インターフェイスと互換
- 誘導性キックバック保護用のフリー・ホイール・ダイオード内蔵
- 入力プルダウン抵抗により入力ドライバをトライステートとすることが可能
- 入力RCスナバーにより、ノイズの多い環境でスプリアス動作を排除
- 誘導性負荷ドライバ・アプリケーション
- JESD 22を超えるESD保護
 - HBM $\pm 2\text{kV}$ 、CDM $\pm 500\text{V}$
- 16ピンのSOICおよびTSSOPパッケージで供給

2 アプリケーション

- 誘導性負荷
 - リレー
 - ユニポーラ・ステッパおよびブラシ付きDCモータ
 - ソレノイドおよびバルブ
- LED
- ロジック・レベルのシフト
- ゲートおよびIGBTドライブ

3 概要

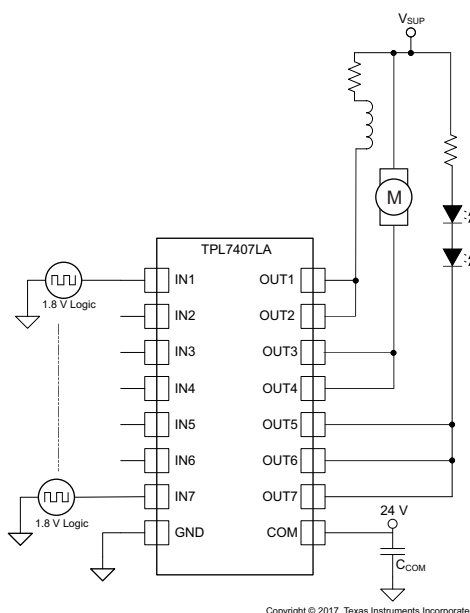

TPL7407LAは高電圧、大電流のNMOSトランジスタ・アレイです。このデバイスは、出力電圧の高い7つのNMOSトランジスタと、誘導性負荷のスイッチングを行う共通カソードのクランプ・ダイオードで構成されます。単一のNMOSチャンネルの最大ドレイン電流定格は600mAです。すべてのGPIO範囲(1.8V~5V)にわたって最大の駆動強度を得るため、新しいレギュレーションおよび駆動回路が追加されました。トランジスタを並列接続して、より大電流を使用することもできます。

5 概要（続き）

TPL7407LAの主要な利点は、バイポーラのダーリントン実装と比べて電力効率が高く、リークが少ないことです。 V_{OL} が低い
ため、従来のリレー・ドライバと比べて消費電力が半分以下で、電流はチャンネルごとに250mA未満です。

7 Specifications

7.1 Absolute Maximum Ratings

at 25°C free-air temperature (unless otherwise noted) ⁽¹⁾

		MIN	MAX	UNIT
V _{OUT}	Pins OUT1-OUT7 to GND voltage	-0.3	32	V
V _{OK}	Output clamp diode reverse voltage ⁽²⁾	-0.3	32	V
V _{COM}	COM pin voltage ⁽²⁾	-0.3	32	V
V _{IN}	Pins IN1-IN7 to GND voltage ⁽²⁾	-0.3	30	V
I _{DS}	Continuous drain current per channel ⁽³⁾ ⁽⁴⁾		600	mA
I _{OK}	Output clamp current		500	mA
I _{GND}	Total continuous GND-pin current		-2	A
T _J	Operating virtual junction temperature	-40	150	°C
T _{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to the GND/substrate pin, unless otherwise noted.
- (3) Maximum power dissipation is a function of T_J(max), θ_{JA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is P_D = (T_J(max) - T_A)/θ_{JA}. Operating at the absolute maximum T_J of 150°C can affect reliability.
- (4) The package thermal impedance is calculated in accordance with JESD 51-7.

7.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±500
			V

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 500-V HBM is possible with the necessary precautions.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible with the necessary precautions.

7.3 Recommended Operating Conditions

Over operating temperature range

		MIN	MAX	UNIT
V _{OUT}	OUT1 – OUT7 pin voltage for recommended operation	0	30	V
V _{COM}	COM pin voltage range for full output drive	6.5	30	V
V _{IL}	IN1- IN7 input low voltage ("Off" high impedance output)		0.9	V
V _{IH}	IN1- IN7 input high voltage ("Full Drive" low impedance output)	1.5		V
T _A	Operating free-air temperature	-40	125	°C
I _{DS}	Continuous drain current	0	500	mA

7.4 Thermal Information

THERMAL METRIC ⁽¹⁾	TPL7407LA		UNIT	
	TSSOP (PW)	SOIC (D)		
	16 PINS	16 PINS		
θ _{JA}	Junction-to-ambient thermal resistance	113.1	88	°C/W
θ _{JCtop}	Junction-to-case (top) thermal resistance	46.5	47.6	°C/W
θ _{JB}	Junction-to-board thermal resistance	58.6	45.5	°C/W
ψ _{JT}	Junction-to-top characterization parameter	7	14.9	°C/W
ψ _{JB}	Junction-to-board characterization parameter	58	45.3	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

7.5 Electrical Characteristics

 $T_J = -40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$; Typical Values at $T_A = 25^{\circ}\text{C}$ ⁽¹⁾

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
V_{OL} (V_{DS})	OUT1- OUT7 low-level output voltage	$V_{IN} \geq 1.5\text{ V}$	$I_D = 100\text{ mA}$		210	450	mV
			$I_D = 200\text{ mA}$		430	900	
V_{IL}	IN1- IN7 low-level input voltage	$I_D = 5\text{ }\mu\text{A}$				0.9	V
V_{IH}	IN1- IN7 high-level input voltage	$I_D = 100\text{ mA}$		1.5			V
$I_{OUT(OFF)}$ (I_{DS_OFF})	OUT1- OUT7 OFF-state leakage current	$V_{OUT} = 24\text{V}$, $V_{IN} \leq 0.9\text{V}$			10	500	nA
V_F	Clamp forward voltage	$I_F = 200\text{ mA}$				1.4	V
$I_{IN(off)}$	IN1- IN7 Off-state input current	$V_{INX} = 0\text{ V}$	$V_{OUT} = 30\text{ V}$			500	nA
$I_{IN(ON)}$	IN1- IN7 ON state input current	$V_{INX} = 1.5\text{ V} - 5\text{ V}$				10	μA
I_{COM}	Static current flowing through COM pin	$V_{COM} = 6.5\text{ V} - 30\text{ V}$			17	30	μA

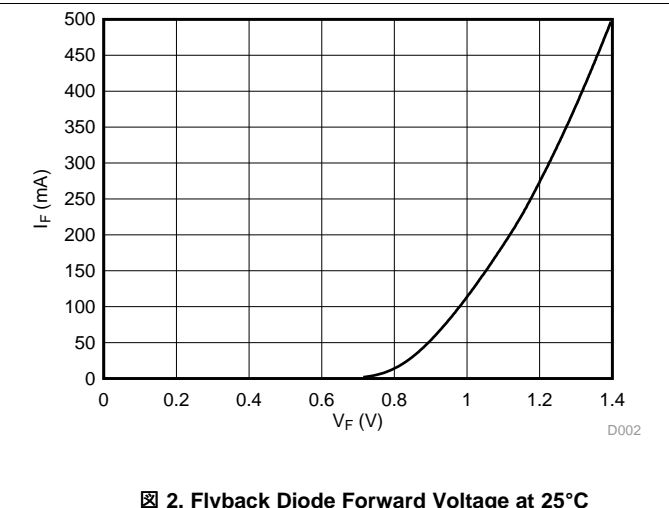

(1) During production testing, device is tested under short duration, therefore $T_A = T_J$.

7.6 Switching Characteristics

 Typical Values at $T_A = 25^{\circ}\text{C}$

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
t_{PLH}	Propagation delay time, low- to high-level output	$V_{INX} \geq 1.65\text{ V}$, $V_{pull-up} = 24\text{ V}$, $R_{pull-up} = 48\text{ }\Omega$			350		ns
t_{PHL}	Propagation delay time, high- to low-level output	$V_{INX} \geq 1.65\text{ V}$, $V_{pull-up} = 24\text{ V}$, $R_{pull-up} = 48\text{ }\Omega$			350		ns
C_i	Input capacitance	$V_i = 0$,	$f = 100\text{ kHz}$		5		pF

7.7 Typical Characteristics

8 Detailed Description

8.1 Overview

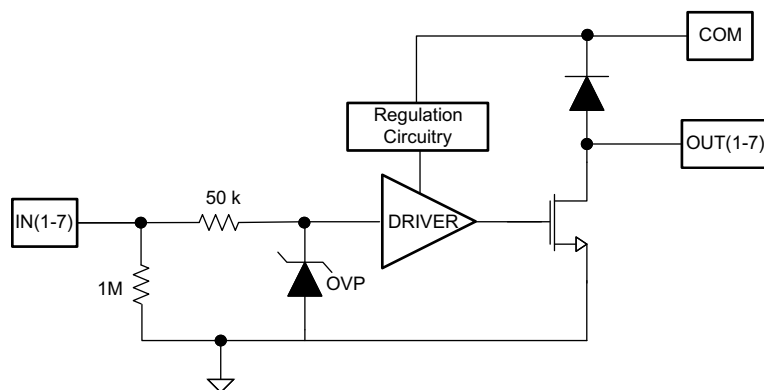

This device has proven ubiquity and versatility across a wide range of applications. This is due to its integration of 7 low side NMOS transistors that are capable of sinking up to 600 mA and wide GPIO range capability.

The TPL7407LA comprises seven high voltage, high current NMOS transistors tied to a common ground driven by internal level shifting and gate drive circuitry. The TPL7407LA offers solutions to many interface needs, including solenoids, relays, lamps, small motors, and LEDs. Applications requiring sink currents beyond the capability of a single output may be accommodated by paralleling the outputs.

The TPL7407LA also enables pin to pin replacement with legacy 7 channel darlington pair implementations.

This device can operate over a wide temperature range (-40°C to $+125^{\circ}\text{C}$).

8.2 Functional Block Diagram

8.3 Feature Description

Each channel of the TPL7407LA consists of high power low side NMOS transistors driven by level shifting and gate driving circuitry. The gate drivers allow for high output current drive with a very low input voltage, meaning full operation with low GPIO voltages.

In order to enable floating inputs a $1\text{-M}\Omega$ pull-down resistor exists on each channel. Another $50\text{-k}\Omega$ resistor exists between the input and gate driving circuitry. This exists to limit the input current whenever there is an over voltage and the internal Zener clamps. It also interacts with the inherent capacitance of the gate driving circuitry to behave as an RC snubber to help prevent spurious switching in noisy environment.

In order to power the gate driving circuitry an LDO exists. See the [Power Supply Recommendations](#) section for further detail on this circuitry.

The diodes connected between the output and COM pin is used to suppress kick-back voltage from an inductive load that is excited when the NMOS drivers are turned off (stop sinking) and the stored energy in the coils causes a reverse current to flow into the coil supply.

8.4 Device Functional Modes

8.4.1 Inductive Load Drive

When the COM pin is tied to the coil supply voltage, the TPL7407LA is able to drive inductive loads and suppress the kick-back voltage via the internal free wheeling diodes.

8.4.2 Resistive Load Drive

When driving a resistive load, a pull-up resistor is needed in order for the TPL7407LA to sink current and for there to be a logic high level. The COM pin must be supplied $\geq 6.5\text{ V}$ for full functionality.

Device Functional Modes (continued)

8.4.3 ON State Input Current

The current into the INx pins is defined in the electrical characteristics table for input voltages from 1.5 V to 5 V. At higher voltages, this leakage increases, and the input current can be estimated using the approximate clamp voltage for the OVP diode, 6.4 V. 式 1 shows how to approximate input current for input voltages greater than 6.4 V:

$$I_{IN(ON)} = V_{IN} / 1M\Omega + (V_{IN} - 6.4V) / 50k\Omega$$

where

- V_{IN} is the input voltage
- 1 M Ω is the input pull-down resistance
- 50 k Ω is the input series resistance
- 6.8 V is the approximate clamp voltage for the OVP diode

(1)

9 Application and Implementation

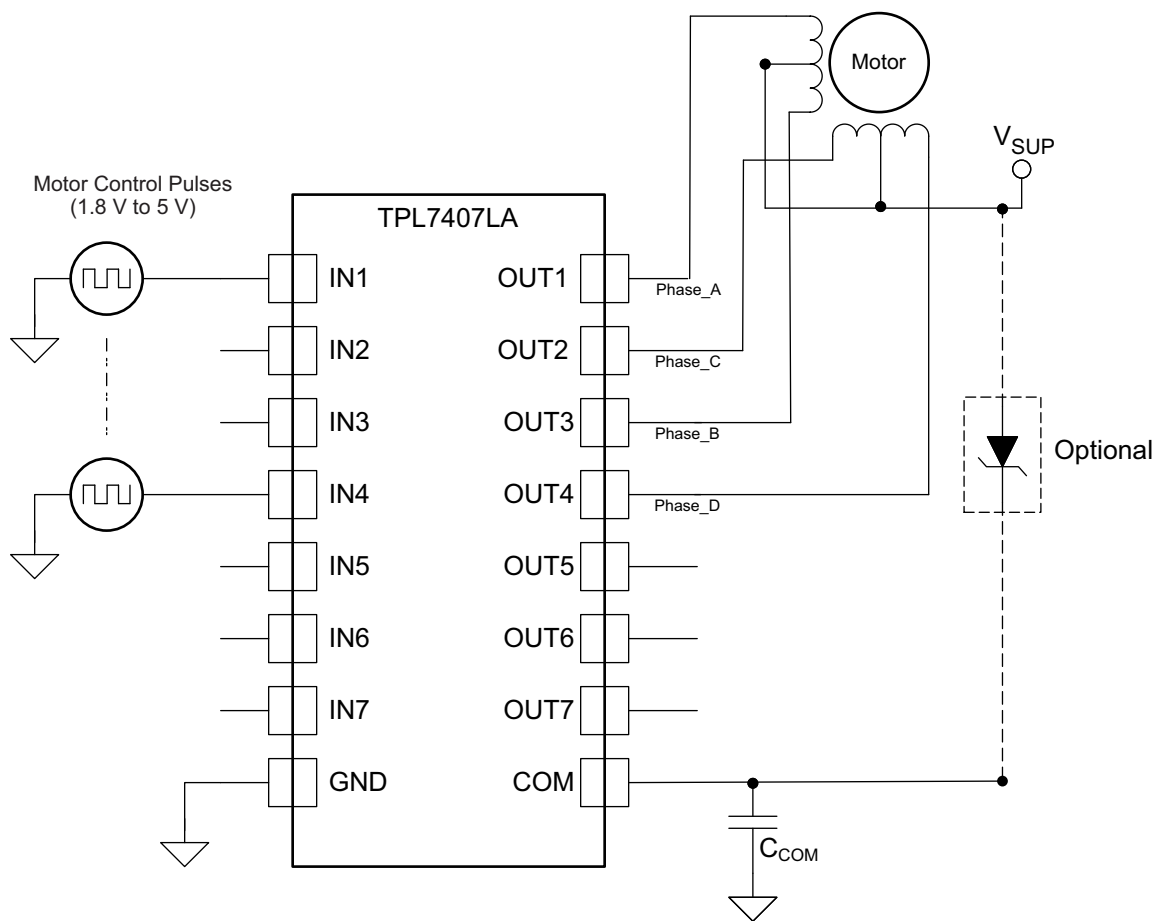

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TPL7407LA is typically used to drive a high voltage and/or current peripheral from an MCU or logic device that cannot tolerate these conditions. The following design is a common application of the TPL7407LA, driving inductive loads. This includes motors, solenoids & relays. Each load type can be modeled by what's seen in [Figure 9](#).

9.1.1 Unipolar Stepper Motor Driver

Copyright © 2017, Texas Instruments Incorporated

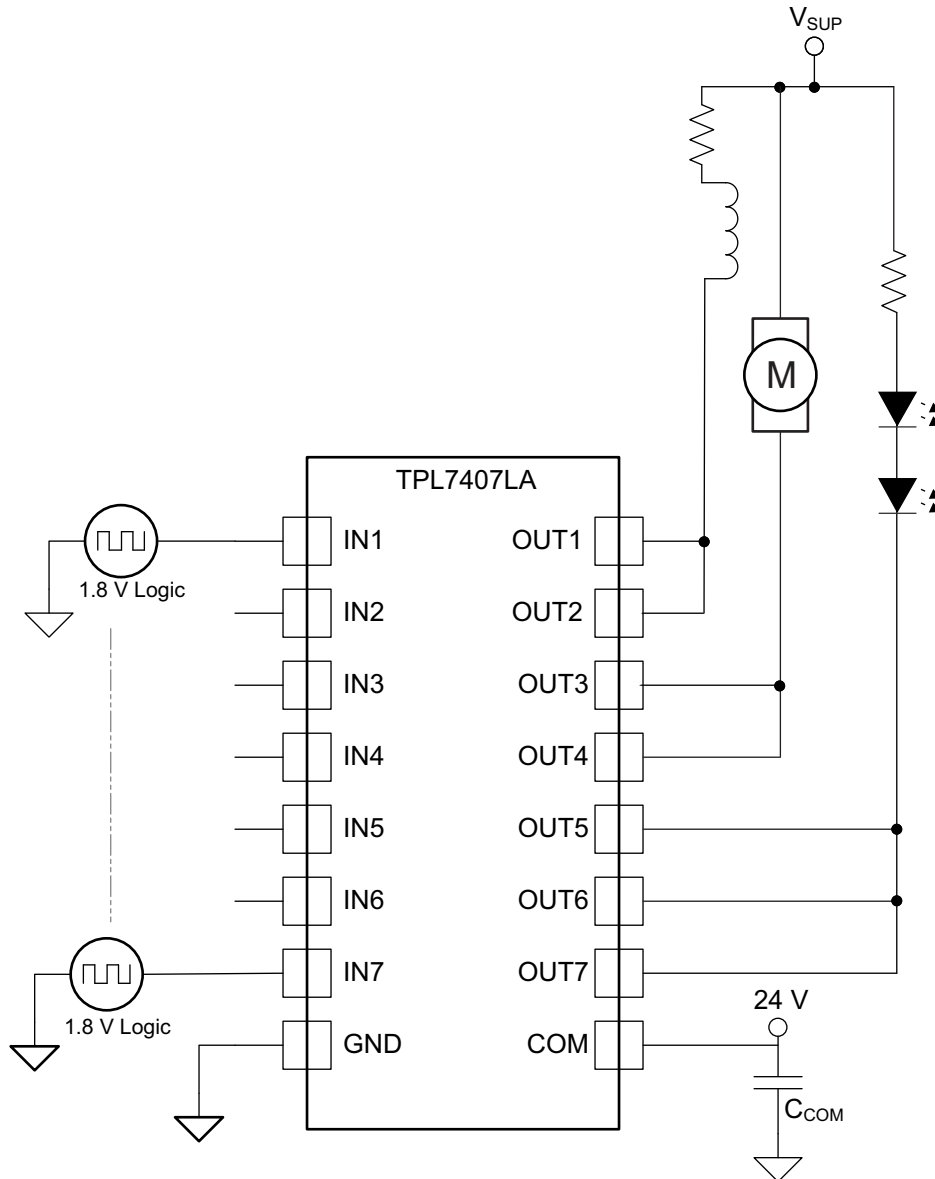

Figure 7. Stepper Motor Driver Schematic

[Figure 7](#) shows an implementation of the TPL7407LA for driving a unipolar stepper motor. The unconnected input channels can be used for other functions. When an input pin is left open the internal 1-M Ω pull down resistor pulls the respective input pin to GND potential. For higher noise immunity use an external short across an unconnected input and GND pins. The COM pin must be tied to the supply of whichever inductive load is being driven for the driver to be protected by the free-wheeling diode.

For more information on this application, see the [Stepper Motor Driving With Peripheral Drivers \(Driver ICs\)](#) application report.

Application Information (continued)

9.1.2 Multi-Purpose Sink Driver

Copyright © 2017, Texas Instruments Incorporated

图 8. Multi-Purpose Sink Driver Schematic

When configured as per 图 8, the TPL7407LA may be used as a multi-purpose driver. The output channels may be tied together to sink more current. The TPL7407LA can easily drive motors, relays & LEDs with little power dissipation. COM must be tied to highest load voltage, which may or may not be same as inductive load supply.

9.2 Typical Application

A common application for the TPL7407LA is driving inductive loads such as relays, solenoids, and unipolar stepper motors.

Copyright © 2017, Texas Instruments Incorporated

9. Inductive Load Driver Schematic

Typical Application (continued)

9.2.1 Design Requirements

For this design example, use the parameters listed in [表 1](#) as the input parameters.

表 1. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
GPIO Voltage	1.8 V, 3.3 V or 5 V
Coil supply voltage	6.5 V to 30 V
Number of channels	7
Output current (R_{COIL})	20 mA to 300 mA per channel
C_{COM}	0.1 μ F
Duty cycle	100%

9.2.2 Detailed Design Procedure

When using the TPL7407LA in a coil driving application, determine the following:

- Input Voltage Range
- Temperature Range
- Output & Drive Current
- Power Dissipation

9.2.2.1 TTL and other Logic Inputs

The TPL7407LA input interface is specified for standard 1.8 V through 5 V CMOS logic interface and can tolerate up to 30 V. At any input voltage the output drivers is going to be driven at its maximum when V_{com} is greater than or equal to 6.5 V.

9.2.2.2 Input RC Snubber

The TPL7407LA features an input RC snubber that helps prevent spurious switching in noisy environments. Connect an external 1 k Ω to 5 k Ω resistor in series with the input to further enhance the TPL7407LA's noise tolerance.

9.2.2.3 High-Impedance Input Drivers

The TPL7407LA features a 1-M Ω input pull-down resistor. The presence of this resistor allows the input drivers to be tri-stated. When a high-impedance driver is connected to a channel input the TPL7407LA detects the channel input as a low level input and remains in the OFF position. The input RC snubber helps improve noise tolerance when input drivers are in the high-impedance state.

9.2.2.4 Drive Current

The coil current is determined by the coil voltage (V_{SUP}), coil resistance & output low voltage (V_{OL}) as shown in [式 2](#).

$$I_{COIL} = (V_{SUP} - V_{OL}) / R_{COIL} \quad (2)$$

9.2.2.5 Output Low Voltage

The output low voltage (V_{OL}) is drain to source (V_{DS}) voltage of the output NMOS transistors when the input is driven high and it is sinking current and can be determined by the [Specifications](#) section or [图 1](#).

9.2.3 Application Curve

Figure 10 was generated with TPL7407LA driving an OMRON G5NB relay -- $V_{in} = 5\text{ V}$; $V_{sup} = 12\text{ V}$ & $R_{COIL} = 2.8\text{ k}\Omega$

10 Power Supply Recommendations

The COM pin is the power supply pin of this device to power the gate drive circuitry. While a bypass capacitor on this pin is recommended for sensitive power supplies, it is not required for proper operation of the device. The COM pin supply ensures full drive potential with any GPIO above 1.5 V. The gate drive circuitry is based on low voltage CMOS transistors that can only handle a max gate voltage of 7 V. An integrated LDO reduces the COM voltage of 6.5 V to 30 V to a regulated voltage of 5.3 V. Though 6.5 V minimum is recommended for Vcom, the part still functions with a reduced COM voltage that has a reduced gate drive voltage and a resulting higher R_{dson}.

11 Layout

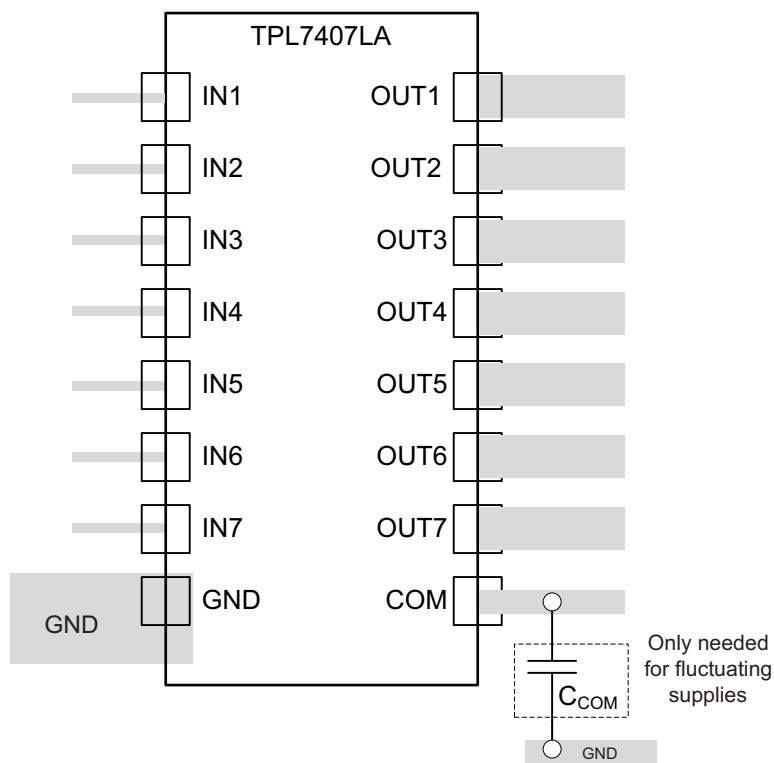

11.1 Layout Guidelines

Thin traces can be used on the input due to the low current logic that is typically used to drive the TPL7407LA. Care must be taken to separate the input channels as much as possible, so as to eliminate cross-talk. Thick traces are recommended for the output, in order to drive whatever high currents that may be needed. Wire thickness can be determined by the trace material's current density and desired drive current.

Since all of the channels currents return to a common ground, it is best to size that trace width to be very wide. Some applications require up to 2 A.

Since the COM pin only draws up to 30 μ A, thick traces are not necessary.

11.2 Layout Example

Copyright © 2017, Texas Instruments Incorporated

☒ 11. Package Layout

11.3 Thermal Considerations

The number of coils driven is dependent on the coil current and on-chip power dissipation. The number of coils driven can be determined by [Figure 3](#) or [Figure 4](#).

For a more accurate determination of number of coils possible, use [Equation 3](#) to calculate TPL7407LA on-chip power dissipation P_D :

$$P_D = \sum_{i=1}^N V_{OLi} \times I_{Li}$$

where

- N is the number of channels active together
- V_{OLi} is the OUT_i pin voltage for the load current I_{Li} . This is the same as $V_{CE(SAT)}$ (3)

In order to guarantee reliability of TPL7407LA and the system, the on-chip power dissipation must be lower than or equal to the maximum allowable power dissipation ($P_{D(MAX)}$) dictated by below equation [Equation 4](#).

$$PD_{(MAX)} = \frac{(T_{J(MAX)} - T_A)}{\theta_{JA}}$$

where

- $T_{J(MAX)}$ is the target maximum junction temperature
- T_A is the operating ambient temperature
- θ_{JA} is the package junction to ambient thermal resistance (4)

It is recommended to limit the TPL7407LA IC's die junction temperature to less than 125°C. The IC junction temperature is directly proportional to the on-chip power dissipation.

11.3.1 Improving Package Thermal Performance

θ_{JA} value depends on the PC board layout. An external heat sink and/or a cooling mechanism, like a cold air fan, can help reduce θ_{JA} and thus improve device thermal capabilities. Refer to TI's design support web page at www.ti.com/thermal for a general guidance on improving device thermal performance.

TPL7407LAPWR.A	Active	Production	TSSOP (PW) 16	2000 LARGE T&R	Yes	SN	Level-1-260C-UNLIM	-40 to 125	TPL747LA

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
5. Reference JEDEC registration MO-153.

EXAMPLE BOARD LAYOUT

PW0016A

TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE: 10X

4220204/A 02/2017

NOTES: (continued)

- 6. Publication IPC-7351 may have alternate designs.
- 7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

PW0016A

TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE: 10X

4220204/A 02/2017

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.
