

TUSB213-Q1 USB 2.0高速信号コンディショナー

1 特長

- 車載アプリケーションに対応
- 下記内容でAEC-Q100認定済み
 - デバイス温度グレード 2: 動作時周囲温度 -40°C ~ 105°C
 - デバイスHBM分類レベルH1C
 - デバイスCDM分類レベルC3
- USB 2.0、OTG 2.0、BC 1.2と互換
- ピン・ストラップまたはI²Cで構成可能
- LS、FS、HS信号処理のサポート
- USB切断およびシャットダウン時の非常に低い消費電力
- スケーラブルなソリューション - 損失の大きいアプリケーションにはデジタイゼーション・デバイスを使用
- D1P/MおよびD2P/Mを交換可能で、ホスト/デバイスに非依存
- プリチャネルで最大5m、ポストチャネルで最大2mの長さのケーブルに対応
 - 外付けのプルダウン抵抗により、4つのAC昇圧設定を選択可能
 - DC昇圧とAC昇圧により最良の信号整合性を実現

2 アプリケーション

- 車載インフォテインメント
- ノートブックPC
- デスクトップPC
- ドッキング・ステーション
- タブレット
- 携帯電話
- アクティブ・ケーブル、ケーブル・エクステンダ
- バックプレーン
- TV

3 概要

TUSB213-Q1は、USBハイ・スピード(HS)信号コンディショナーで、伝送チャネルでのISI信号損失を補償するように設計されています。これにより、USBの電氣的コンプライアンスのテストに合格するために役立ちます。

TUSB213-Q1は、特許出願中の設計により、USBロー・スピード(LS)およびフル・スピード(FS)信号でも関係なく動作します。LSおよびFS信号の特性は、TUSB213-Q1により影響を受けず、HS信号は補償されます。

信号のAC昇圧およびDC昇圧をプログラム可能なので、デバイスの性能を微調整してハイ・スピード信号をコネクタで最適化でき、多くの異なるアプリケーションで使用可能です。

さらに、TUSB213-Q1はUSB On-The-Go (OTG)やBattery Charging (BC)プロトコルとも互換性があります。

5 Pin Configuration and Functions

Pin Functions

PIN		I/O	INTERNAL PULLUP/PULLDOWN	DESCRIPTION
NAME	NO.			
EQ	1	I	N/A	USB High Speed AC boost select via external pull down resistor. Sampled upon de-assertion of RSTN. Does not recognize real time adjustments. See application section for details. Auto selects maximum AC boost level when left floating.
NC	2, 3	N/A	N/A	Leave unconnected.
DC_BOOST ⁽¹⁾ /ENA_HS	4	I/O		In I2C mode: Reserved for TI test purpose. In non-I2C mode: At reset: 3-level input signal DC_BOOST. USB High Speed DC signal boost selection. H (pin is pulled high) – 80 mV M (pin is left floating) – 60 mV L (pin is pulled low) – 40 mV After reset: Output signal ENA_HS. Flag indicating that channel is in High Speed mode. Asserted upon: 1. Detection of USB-IF High Speed test fixture from an unconnected state followed by transmission of USB_TEST_PACKET pattern. 2. Squelch detection following USB reset with a successful HS handshake [HS handshake is declared to be successful after single chirp J chirp K pair where each chirp is within 18 μ s – 128 μ s].
D2P	5	I/O	N/A	USB High Speed positive port.
D2M	6	I/O	N/A	USB High Speed negative port.
GND	7	PWR	N/A	Ground
VREG	8	O	N/A	1.8-V LDO output. Only enabled when operating in High Speed mode. Requires 0.1- μ F external capacitor to GND to stabilize the core.
D1M	9	I/O	N/A	USB High Speed negative port..
D1P	10	I/O	N/A	USB High Speed positive port.
SDA ⁽²⁾	11	I/O	RSTN asserted: 500 k Ω PD	I2C Mode: Bidirectional I2C data pin [I2C address = 0x2C]. In non I2C mode: Reserved for TI test purpose.

(1) Pull-down and pull-up (to 3.3 V) resistors for DC_BOOST pins must be between 22 k Ω to 47 k Ω in non I²C mode.

(2) Pull-up resistors for SDA and SCL pins in I²C mode should be 4.7 k Ω (5%). If both SDA and SCL are pulled up at reset the device enters into I²C mode.

Pin Functions (continued)

PIN		I/O	INTERNAL PULLUP/PULLDOWN	DESCRIPTION
NAME	NO.			
VCC	12	PWR	N/A	Supply power
SCL ⁽²⁾ /CD	13	I/O	RSTN asserted: 500 kΩ PD	In I2C mode: I2C clock pin [I2C address = 0x2C]. Non I2C mode: After reset: Output CD. Flag indicating that a USB device is attached (connection detected). Asserted from an unconnected state upon detection of DP or DM pull-up resistor. De-asserted upon detection of disconnect.
RSTN	14	I	500 kΩ PU	Device disable/enable. Low – Device is at reset and in shutdown, and High – Normal operation. Recommend 0.1-μF external capacitor to GND to ensure clean power on reset if not driven. If the pin is driven, it must be held low until the supply voltage for the device reaches within specifications.

6 Specifications

6.1 Absolute Maximum Ratings

 over operating free-air temperature and voltage range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
Supply Voltage Range	VCC	-0.3	6	V
Voltage Range on I/O pins	DxP, DxM, RSTN, EQ, SCL, SDA, DC_BOOST, VREG	-0.3	3.8	V
T _{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Rating* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Condition*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	±2000
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	±500

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature and voltage range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
V _{CC}	Supply voltage		4.4	5	5.5	V
T _A	Ambient temperature	TUSB213Q1	-40		105	°C
T _J	Junction temperature	TUSB213Q1	-40		125	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		RGY (VQFN)	UNIT
		14 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	49.1	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	52.8	°C/W
R _{θJB}	Junction-to-board thermal resistance	24.2	°C/W
Ψ _{JT}	Junction-to-top characterization parameter	2.2	°C/W
Ψ _{JB}	Junction-to-board characterization parameter	24.3	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	7	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics

over operating free-air temperature and voltage range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
POWER						
I _{ACTIVE_HS}	High-speed active current	USB channel = HS mode; 480 Mbps traffic; V _{CC} = 5V; V _{CC} supply stable; DC Boost = 60 mV		18	30	mA
I _{IDLE_HS}	High-speed idle current	USB channel = HS mode; no traffic; V _{CC} = 5V; V _{CC} supply stable; DC Boost = 60 mV		13	22	mA
I _{SUSPEND_HS}	High-speed suspend current	USB channel = HS suspend mode; V _{CC} = 5V; V _{CC} supply stable		0.76	1.5	mA

FIG 5. USB2.0 HS Eye diagram, Host far-end with 5m cable pre-channel loss with TUSB213-Q1

7 Detailed Description

7.1 Overview

The TUSB213-Q1 is a USB High-Speed (HS) signal conditioner, designed to compensate for ISI signal loss in a transmission channel. TUSB213-Q1 has a patent-pending design which is agnostic to USB Low Speed (LS) and Full Speed (FS) signals and does not alter their signal characteristics, while HS signals are compensated. In addition, the design is compatible with USB On-The-Go (OTG) and Battery Charging (BC) specifications.

Programmable signal AC boost through an external resistor on EQ pin permits fine tuning device performance to optimize signals helping to pass USB HS electrical compliance tests at the connector. Additional DC Boost configurable by three level input DC_BOOST pin helps overcoming the cable losses.

7.2 Functional Block Diagram

Copyright © 2017, Texas Instruments Incorporated

7.3 Feature Description

7.3.1 EQ

The EQ pin of the TUSB213-Q1 is used to configure the AC boost of the device. The four levels of AC boost are set through different values of an external pulldown resistor at this pin.

7.3.2 DC BOOST

The DC_BOOST pin of the TUSB213-Q1 is a tri-level pin, used to set the DC gain of the device according to [Table 1](#).

表 1. DC Boost Settings

DC BOOST SETTING VIA PIN STRAP	
DC_BOOST	DC Boost Setting (mV)
V_{IL}	40
V_{IM}	60
V_{IH}	80

7.4 Device Functional Modes

7.4.1 Low Speed (LS) Mode

TUSB213-Q1 automatically detects a LS connection and does not enable signal compensation. CD pin is asserted high.

7.4.2 Full Speed (FS) Mode

TUSB213-Q1 automatically detects a FS connection and does not enable signal compensation. CD pin is asserted high.

Device Functional Modes (continued)

7.4.3 High Speed (HS) Mode

TUSB213-Q1 automatically detects a HS connection and will enable signal compensation as determined by the configuration of the DC_BOOST pin and the external pulldown resistance on its EQ pin. CD pin asserted high.

7.4.4 Shutdown Mode

TUSB213-Q1 is disabled when its RSTN pin is asserted low. In shutdown mode, the USB channel is still fully operational but there is neither signal compensation nor any indication from the CD pin as to the status of the channel.

7.4.5 I²C Mode

TUSB213-Q1 support 100 kHz I²C for device configuration, status readback and test purposes. This controller is enabled after SCL and SDA pins are sampled high shortly after de-assertion of RSTN. In this mode, the register as described in 表 2 can be accessed by I²C read/write transaction to 7-bit slave address 0x2C. It is necessary to set CFG_ACTIVE bit and reset it to zero after making changes to the EQ and DC Boost level registers to restart the state machine.

注

All registers or fields in 表 2 which are not specifically mentioned are considered reserved. The default value of these reserved registers or fields must not be changed. It is suggested to perform a read-modify-write operation to maintain the default value of the reserved fields.

表 2. Register definition

Offset	Bit(s)	Name	Type	Default	Description
0x01	6:4	ACB_LVL	RW	XXX (Sampled from EQ pin at reset)	Sets the level of AC boost 000 :Level 0 AC boost programmed [MIN] 001 : Level 1 AC boost programmed 011 : Level 2 AC boost programmed 111 : Level 3 AC boost programmed [MAX]
0x03	0	CFG_ACTIVE	RW	1b	Configuration mode 0 : Normal mode. State machine enabled. 1 : Configuration mode: State machine disabled. After reset, if I2C mode is true (SCL and SDA are both pulled high) it is maintained until it is cleared by an I2C write, but, if I2C mode is not true, it is cleared automatically.
0x0E	2:0	DCB_LVL	RW	XXX (Sampled from DC_BOOST pin at reset)	Sets the level of DC Boost 011 : 40mV (DC_Boost = L) 101 : 60mV (DC_Boost = M, default) 111 : 80mV (DC_Boost = H)

8 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The primary purpose of the TUSB213-Q1 is to re-store the signal integrity of a USB High Speed channel up to the USB connector. The loss in signal quality stems from reduced channel bandwidth due to high loss PCB trace and other components that contribute a capacitive load. This can cause the channel to fail the USB near end eye mask. Proper use of the TUSB213-Q1 can help to pass this eye mask. Additionally the DC Boost helps overcoming DC losses from cables and traces.

A secondary purpose is to use the CD pin of the TUSB213-Q1 to control other blocks on the customer platform if so desired.

8.2 Typical Application

A typical application is shown in [Figure 6](#). In this setup, D2P and D2M face the USB connector while D1P and D1M face the USB host or hub. If desired, the orientation may be reversed [that is, D2 faces transceiver and D1 faces connector].

Figure 6. Typical Application

Typical Application (continued)

8.2.1 Design Requirements

For this design example, use the parameters shown in the table below.

表 3. Design Parameters

PARAMETER				VALUE
V_{CC} (4.4 V to 5.5 V)				5 V
I ² C support required in system (Yes/No)				No
AC Boost	R_{EQ}		Level	AC Boost Level 2: $R_{EQ} = 3.83\text{ k}$
	0- Ω		0	
	1.69 k $\pm$ 1%		1	
	3.83 k $\pm$ 1%		2	
	DNI		3	
DC Boost	R_{DC1}	R_{DC2}	Level	Mid DC Level: $R_{DC1} = \text{DNI}$ $R_{DC2} = \text{DNI}$
	22 k Ω - 47 k Ω	Do Not Install (DNI)	40 mV Low DC boost	
	DNI	DNI	60 mV Mid DC boost	
	47 k Ω	24 k Ω	80 mV High DC boost	

8.2.2 Detailed Design Procedure

TUSB213-Q1 requires a valid reset signal as described in the power supply recommendations section. The capacitor at RSTN pin is not required if a microcontroller drives the RSTN pin according to recommendations.

VREG pin is the internal LDO output that requires a 0.1- μ F external capacitor to GND to stabilize the core.

The ideal AC boost setting is dependent upon the signal chain loss characteristics of the target platform. The general recommendation is to start with AC boost level 0, and then increment to AC boost level 1, etc. if permissible. Same applies to the DC Boost setting where it is recommended to plan for the required pads or connections to change boost settings, but to start with DC boost level 1.

In order for the TUSB213-Q1 to recognize any change to the AC and DC Boost settings, the RSTN pin must be toggled. This is because the configuration is latched on power up and the inputs are ignored thereafter.

注

The TUSB213-Q1 compensates for DC attenuation in the signal path according to the configuration of the DC_BOOST pin. This pin is not 5V tolerant and therefore when selecting the highest DC boost level, the voltage level at DC_BOOST pin must be less than 3.6V.

Placement of the device is also dependent on the application goal. 表 4 summarizes our recommendations.

表 4. Platform Placement Guideline

PLATFORM GOAL	SUGGESTED DEVICE PLACEMENT
Pass USB Near End Mask	Close to measurement point
Pass USB Far End Eye Mask	Close to USB PHY
Cascade multiple devices to improve device enumeration	Midway between each USB interconnect

TUSB213-Q1

图 7. Reference Schematic

8.2.2.1 Test Procedure to Construct USB High Speed Eye Diagram

注

USB-IF certification tests for High Speed eye masks require the *mandated use* of the USB-IF developed test fixtures. These test fixtures do not require the use of oscilloscope probes. Instead they use SMA cables. More information can be found at the USB-IF Compliance Updates Page. It is located under the 'Electricals' section, ID 86 dated March 2013.

The following procedure must be followed before using any oscilloscope compliance software to construct a USB High Speed Eye Mask:

8.2.2.1.1 For a Host Side Application

1. Configure the TUSB213-Q1 to the desired AC and DC Boost settings
2. Power on (or toggle the RSTN pin if already powered on) the TUSB213-Q1
3. Using SMA cables, connect the oscilloscope and the USB-IF host-side test fixture to the TUSB213-Q1
4. Enable the host to transmit USB TEST_PACKET
5. Execute the oscilloscope USB compliance software.
6. Repeat the above steps in order to re-test TUSB213-Q1 with a different settings

8.2.2.1.2 For a Device Side Application

1. Configure the TUSB213-Q1 to the desired AC and DC Boost settings
2. Power on (or toggle the RSTN pin if already powered on) the TUSB213-Q1
3. Connect a USB host, the USB-IF device-side test fixture, and USB device to the TUSB213-Q1. Ensure that the USB-IF device test fixture is configured to the 'INIT' position
4. Allow the host to enumerate the device
5. Enable the device to transmit USB TEST_PACKET
6. Using SMA cables, connect the oscilloscope to the USB-IF device-side test fixture and ensure that the device-side test fixture is configured to the 'TEST' position.
7. Execute the oscilloscope USB compliance software.
8. Repeat the above steps in order to re-test TUSB213-Q1 with a different settings

8.2.3 Application Curves

8. Eye Diagram Bench Setup

图 20. Mid DC Boost, AC Boost Level 3

图 21. High DC Boost, AC Boost Level 3

9 Power Supply Recommendations

On power up, the interaction of the RSTN pin and power on ramp could result in digital circuits not being set correctly. The device should not be enabled until the power on ramp has settled to 4.4 V or higher to ensure a correct power on reset of the digital circuitry. If RSTN cannot be held low by microcontroller or other circuitry until the power on ramp has settled, then an external capacitor from the RSTN pin to GND is required to hold the device in the low power reset state.

The RC time constant should be larger than five times of the power on ramp time (0 to V_{CC}). With a typical internal pullup resistance of 500 k Ω , the recommended minimum external capacitance is calculated as:

$$C_{RSTN} = [\text{Ramp Time} \times 5] \div [500 \text{ k}\Omega] \quad (1)$$

10 Layout

10.1 Layout Guidelines

To avoid the need for signal vias, it is highly recommend to route the High Speed traces on the same surface layer than the TUSB213-Q1 is placed. shows an example how one could layout the PCB for TUSB213-Q1.

The layout should use impedance controlled traces to maintain $90\ \Omega$ differential impedance for the whole signal path as required per USB 2.0 specification. General guidelines for highspeed signal routing apply.

10.2 Layout Example

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
