

TVS3300 33Vフラットクランプ・サージ保護デバイス

1 特長

- 産業用信号ライン向け1kV、42ΩのIEC 61000-4-5サージ・テストに耐える保護機能
- 最大クランプ電圧: サージ電流35A (8/20μs)で40V
- スタンドオフ電圧: 33V
- 小型の1.1mm² WCSPおよび4mm² SONフットプリント
- 125°Cで30Aのサージ電流(8/20μs)の反復ストライクを4,000回吸収
- 強力なサージ保護
 - IEC61000-4-5 (8/20μs): 35A
 - IEC61643-321 (10/1000μs): 4A
- 低リーク電流
 - 27°Cで19nA (標準値)
 - 85°Cで28nA (標準値)
- 低容量: 130pF
- レベル4 IEC 61000-4-2に準拠したESD保護機能を内蔵

2 アプリケーション

- 産業用センサ
- PLC I/Oモジュール
- 24Vの電源ラインまたはデジタル・スイッチング・ライン
- 4/20 mAループ
- 家電製品
- 医療用機器
- モータ・ドライバ

3 概要

TVS3300は、最大35AのIEC 61000-4-5フォルト電流を確実にシャントして、システムを高電力過渡事象や落雷から保護します。一般的な産業用信号ラインのEMC要件向けのソリューションとして、42Ωのインピーダンスにより結合される、最大1kVのIEC 61000-4-5開路電圧に耐えられます。TVS3300は、独自の帰還メカニズムの採用により、フォルト時に高精度のフラット・クランプングを実現し、システムがさらされる電圧を40V未満に抑えます。電圧レギュレーションが正確であるため、許容電圧の低いシステム部品を安心して選択でき、堅牢性を犠牲にすることなくシステムのコストと複雑さを抑えることができます。

さらに、TVS3300は小型の1mm×1.1mm WCSPおよび2mm×2mm SONフットプリントで供給され、スペースの制約されるアプリケーションに理想的で、業界標準のSMAおよびSMBパッケージと比べて90%もサイズを削減できます。リーク電流と容量が極めて低いことから、保護するラインへの影響も最小限に抑えられます。製品のライフサイクル全体にわたる堅牢な保護を保証するために、TIはTVS3300に対し高温で4000回の反復サージが発生するテストを実施し、性能に変化がないことを確認しています。

TVS3300はTIのフラットクランプ・サージ・デバイス・ファミリの製品です。ファミリの他のデバイスについては、「[デバイス比較表](#)」を参照してください。

7 Specifications

7.1 Absolute Maximum Ratings

 $T_A = 27^{\circ}\text{C}$ (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
Maximum Surge	IEC 61000-4-5 Current (8/20 μs)		35	A
	IEC 61000-4-5 Power (8/20 μs)		1330	W
	IEC 61643-321 Current (10/1000 μs) - WCSP		4	A
	IEC 61643-321 Power (10/1000 μs) - WCSP		150	W
	IEC 61643-321 Current (10/1000 μs) - DRV		3.5	A
	IEC 61643-321 Power (10/1000 μs) - DRV		125	W
Maximum Forward Surge	IEC 61000-4-5 Current (8/20 μs)		50	A
	IEC 61000-4-5 Power (8/20 μs)		80	W
	IEC 61643-321 Current (10/1000 μs)		23	A
	IEC 61643-321 Power (10/1000 μs)		60	W
EFT	IEC 61000-4-4 EFT Protection		80	A
I_{BR}	DC Breakdown Current - DRV		10	mA
I_F	DC Forward Current		500	mA
T_A	Ambient Operating Temperature	-40	125	$^{\circ}\text{C}$
T_{stg}	Storage Temperature	-65	150	$^{\circ}\text{C}$

- (1) Stresses beyond those listed under *Absolute Maximum Rating* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Condition*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

7.2 ESD Ratings - JEDEC

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	± 2000	V
	Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	± 500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 ESD Ratings - IEC

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	IEC 61000-4-2 contact discharge	± 11	kV
	IEC 61000-4-2 air-gap discharge	± 30	

7.4 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

PARAMETER	MIN	NOM	MAX	UNIT
V_{RWM} Reverse Stand-off Voltage		33		V

8 Detailed Description

8.1 Overview

The TVS3300 is a precision clamp with a low, flat clamping voltage during transient overvoltage events like surge and protecting the system with zero voltage overshoot.

8.2 Functional Block Diagram

Copyright © 2017, Texas Instruments Incorporated

8.3 Feature Description

The TVS3300 is a precision clamp that handles 35 A of IEC 61000-4-5 8/20 μ s surge pulse. The flat clamping feature helps keep the clamping voltage very low to keep the downstream circuits from being stressed. The flat clamping feature can also help end-equipment designers save cost by opening up the possibility to use lower-cost, lower voltage tolerant downstream ICs. The TVS3300 has minimal leakage under the standoff voltage of 33 V, making it an ideal candidate for applications where low leakage and power dissipation is a necessity. IEC 61000-4-2 and IEC 61000-4-4 ratings make it a robust protection solution for ESD and EFT events. Wide ambient temperature range of -40°C to $+125^{\circ}\text{C}$ a good candidate for most applications. Compact packages enable it to be used in small devices and save board area.

8.4 Reliability Testing

To ensure device reliability, the TVS3300 is characterized against 4000 repetitive pulses of 30 A IEC 61000-4-5 8/20 μ s surge pulses at 125°C . The test is performed with less than 10 seconds between each pulse at high temperature to simulate worst case scenarios for fault regulation. After each surge pulse, the TVS3300 clamping voltage, breakdown voltage, and leakage are recorded to ensure that there is no variation or performance degradation. By ensuring robust, reliable, high temperature protection, the TVS3300 enables fault protection in applications that must withstand years of continuous operation with no performance change.

8.5 Device Functional Modes

8.5.1 Protection Specifications

The TVS3300 is specified according to both the IEC 61000-4-5 and IEC 61643-321 standards. This enables usage in systems regardless of which standard is required in relevant product standards or best matches measured fault conditions. The IEC 61000-4-5 standards requires protection against a pulse with a rise time of 8 μ s and a half length of 20 μ s, while the IEC 61643-321 standard requires protection against a much longer pulse with a rise time of 10 μ s and a half length of 1000 μ s.

Device Functional Modes (continued)

The positive and negative surges are imposed to the TVS3300 by a combinational waveform generator (CWG) with a 2- Ω coupling resistor at different peak voltage levels. For powered on transient tests that need power supply bias, inductances are usually used to decouple the transient stress and protect the power supply. The TVS3300 is post tested by assuring that there is no shift in device breakdown or leakage at V_{rwm} .

In addition, the TVS3300 has been tested according to IEC 61000-4-5 to pass a ± 1 kV surge test through a 42- Ω coupling resistor and a 0.5 μF capacitor. This test is a common test requirement for industrial signal I/O lines and the TVS3300 will serve an ideal protection solution for applications with that requirement.

The TVS3300 allow integrates IEC 61000-4-2 level 4 ESD Protection and 80 A of IEC 61000-4-4 EFT Protection. These combine to ensure that the device can protect against most transient conditions regardless of length or type.

For more information on TI's test methods for Surge, ESD, and EFT testing, reference [TI's IEC 61000-4-x Testing Application Note](#)

8.5.2 Minimal Derating

Unlike traditional diodes the TVS3300 has very little derating of max power dissipation and ensures robust performance up to 125°C, shown in [Figure 8](#). Traditional TVS diodes lose up to 50% of their current carrying capability when at high temperatures, so a surge pulse above 85°C ambient can cause failures that are not seen at room temperature. The TVS3300 prevents this and ensures that you will see the same level of protection regardless of temperature.

8.5.3 Transient Performance

During large transient swings, the TVS3300 will begin clamping the input signal to protect downstream conditions. While this prevents damage during fault conditions, it can cause leakage when the intended input signal has a fast slew rate. In order to keep power dissipation low and remove the chance of signal distortion, it is recommended to keep the slew rate of any input signal on the TVS3300 below 2.5 V/ μs at room temperature and below 0.7 V/ μs at 125°C shown in [Figure 9](#). Faster slew rates will cause the device to clamp the input signal and draw current through the device for a few microseconds, increasing the rise time of the signal. This will not cause any harm to the system or to the device, however if the fast input voltage swings occur regularly it can cause device overheating.

Typical Application (continued)

The small size of the device also improves fault protection by lowering the effect of fault current coupling onto neighboring traces. The small form factor of the TVS3300 allows the device to be placed extremely close to the input connector, lowering the length of the path fault current will take through the system compared to larger protection solutions.

Finally, the low leakage of the TVS3300 will have low input power losses. At 33 V, the device will see typical 19 nA leakage for a constant power dissipation of less than 100 μ W, a small quantity that will minimally effect overall efficiency metrics and heating concerns.

9.2.3 PLC Surge Protection Reference Design

For a detailed description of the TVS3300 advantages in a PLC Analog Input Module, reference TI's [Surge Protection Reference Design for PLC Analog Input Module](#). This document describes the considerations and performance of the TVS3300 in a common industrial application.

9.2.4 Configuration Options

The TVS3300 can be used in either unidirectional or bidirectional configuration. By placing two TVS3300's in series with reverse orientation bidirectional operation can be used, allowing a working voltage of ± 33 V. TVS3300 operation in bidirectional will be similar to unidirectional operation, with a minor increase in breakdown voltage and clamping voltage. The TVS3300 bidirectional performance has been characterized in the [TVS3300 Configurations Characterization](#).

10 Power Supply Recommendations

The TVS3300 is a clamping device so there is no need to power it. To ensure the device functions properly do not violate the recommended V_{IN} voltage range (0 V to 33 V) .

11 Layout

11.1 Layout Guidelines

The optimum placement is close to the connector. EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures. The PCB designer must minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.

Route the protected traces straight.

Eliminate any sharp corners on the protected traces between the TVS3300 and the connector by using rounded corners with the largest radii possible. Electric fields tend to build up on corners, increasing EMI coupling.

TVS3300DRV	Active	Production	WSO (DRV) 6	3000 LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 125	17JH
TVS3300DRV.A	Active	Production	WSO (DRV) 6	3000 LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 125	17JH
TVS3300DRV.G4.A	Active	Production	WSO (DRV) 6	3000 LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 125	17JH
TVS3300YZF	Active	Production	DSBGA (YZF) 4	3000 LARGE T&R	Yes	SNAGCU	Level-1-260C-UNLIM	-40 to 125	15K
TVS3300YZF.A	Active	Production	DSBGA (YZF) 4	3000 LARGE T&R	Yes	SNAGCU	Level-1-260C-UNLIM	-40 to 125	15K

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

4223221/A 08/2016

NOTES: (continued)

- Final dimensions may vary due to manufacturing tolerance considerations and also routing constraints. See Texas Instruments Literature No. SNVA009 (www.ti.com/lit/snva009).

EXAMPLE STENCIL DESIGN

YZF0004

DSBGA - 0.625 mm max height

DIE SIZE BALL GRID ARRAY

SOLDER PASTE EXAMPLE
BASED ON 0.1 mm THICK STENCIL
SCALE:50X

4223221/A 08/2016

NOTES: (continued)

4. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release.

重要なお知らせと免責事項

テキサス・インスツルメンツは、技術データと信頼性データ (データシートを含みます)、設計リソース (リファレンス デザインを含みます)、アプリケーションや設計に関する各種アドバイス、Web ツール、安全性情報、その他のリソースを、欠陥が存在する可能性のある「現状のまま」提供しており、商品性および特定目的に対する適合性の黙示保証、第三者の知的財産権の非侵害保証を含むいかなる保証も、明示的または黙示的にかかわらず拒否します。

これらのリソースは、テキサス・インスツルメンツ製品を使用する設計の経験を積んだ開発者への提供を意図したものです。(1) お客様のアプリケーションに適したテキサス・インスツルメンツ製品の選定、(2) お客様のアプリケーションの設計、検証、試験、(3) お客様のアプリケーションに該当する各種規格や、その他のあらゆる安全性、セキュリティ、規制、または他の要件への確実な適合に関する責任を、お客様のみが単独で負うものとします。

上記の各種リソースは、予告なく変更される可能性があります。これらのリソースは、リソースで説明されているテキサス・インスツルメンツ製品を使用するアプリケーションの開発の目的でのみ、テキサス・インスツルメンツはその使用をお客様に許諾します。これらのリソースに関して、他の目的で複製することや掲載することは禁止されています。テキサス・インスツルメンツや第三者の知的財産権のライセンスが付与されている訳ではありません。お客様は、これらのリソースを自身で使用した結果発生するあらゆる申し立て、損害、費用、損失、責任について、テキサス・インスツルメンツおよびその代理人を完全に補償するものとし、テキサス・インスツルメンツは一切の責任を拒否します。

テキサス・インスツルメンツの製品は、[テキサス・インスツルメンツの販売条件](#)、または [ti.com](https://www.ti.com) やかかるテキサス・インスツルメンツ製品の関連資料などのいずれかを通じて提供する適用可能な条項の下で提供されています。テキサス・インスツルメンツがこれらのリソースを提供することは、適用されるテキサス・インスツルメンツの保証または他の保証の放棄の拡大や変更を意味するものではありません。

お客様がいかなる追加条項または代替条項を提案した場合でも、テキサス・インスツルメンツはそれらに異議を唱え、拒否します。
