

Power Supply Supervisory Circuit

FEATURES

- **Includes Over-Voltage, Under-Voltage, and Current Sensing Circuits**
- **Internal 1% Accurate Reference**
- **Programmable Time Delays**
- **SCR "Crowbar" Drive of 300 mA**
- **Remote Activation Capability**
- **Optional Over-Voltage Latch**
- **Uncommitted Comparator Inputs for Low Voltage Sensing (UC1544 Series Only)**

DESCRIPTION

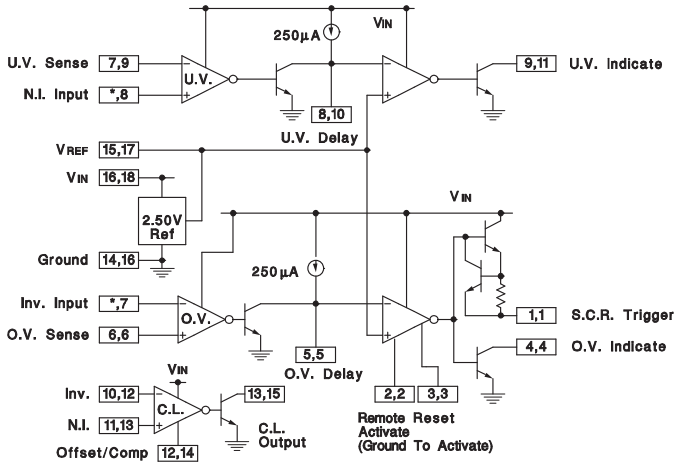
The monolithic integrated circuits contain all the functions necessary to monitor and control the output of a sophisticated power supply system. Over-voltage (O.V.) sensing with provision to trigger an external SCR "crowbar" shutdown; an undervoltage (U.V.) circuit which can be used to monitor either the output or to sample the input line voltage; and a third op amp/comparator usable for current sensing (C.L.) are all included in this device, together with an independent, accurate reference generator.

Both over- and under-voltage sensing circuits can be externally programmed for minimum time duration of fault before triggering. All functions contain open collector outputs which can be used independently or wire-or'ed together, and although the SCR trigger is directly connected only to the over-voltage sensing circuit, it may be optionally activated by any of the other outputs, or from an external signal. The O.V. circuit also includes an optional latch and external reset capability.

The UC1544/2544/3544 devices have the added versatility of completely uncommitted inputs to the voltage sensing comparators so that levels less than 2.5 V may be monitored by dividing down the internal reference voltage. The current sense circuit may be used with external compensation as a linear amplifier or as a highgain comparator. Although nominally set for zero input offset, a fixed threshold may be added with an external resistor. Instead of current limiting, this circuit may also be used as an additional voltage monitor.

The reference generator circuit is internally trimmed to eliminate the need for external potentiometers and the entire circuit may be powered directly from either the output being monitored or from a separate bias voltage.

BLOCK DIAGRAM



NOTE:

For each terminal, first number refers to 1543 series, second to 1544 series. *On 1543 series, this function is internally connected to VREF.

ABSOLUTE MAXIMUM RATINGS(1)

over operating free-air temperature range (unless otherwise noted)

			VALUE	UNIT
V_{IN}	Input supply voltage		40	V
	Sense inputs, voltage range		0 to VIN	
	SCR trigger current (2)		-600	mA
	Indicator output voltage		40	V
	Indicator output sink current		50	mA
	Power dissipation (package limitation)		1000	mW
T_J	Operating temperature range	UC1543, UC1544	-55 to 125	°C
		UC2543, UC2544	-25 to 85	
		UC3543, UC3544	0 to 70	
T_{stg}	Storage temperature range		-65 to 150	

(1) Currents are positive-into, negative-out of the specified terminal.
(2) At higher input voltages, a dissipation limiting resistor, RG, is required.

ELECTRICAL CHARACTERISTICS

Unless otherwise stated, these specifications apply for T_A = -55°C to 125°C for theUC1543 and UC1544; -25°C to 85°C for the UC2543 and UC2544; and 0°C to 70°C for the UC3543 and UC3544. Electrical tests are performed with V_{IN} = 10 V and 2-kΩ pull-up resistors on all indicator outputs. All electrical specifications for the UC1544, UC2544, and UC3544 devices are tested with the inverting over-voltage input and the non-inverting under-voltage input externallyconnected to the 2.5 V reference. $T_A = T_J$.

APPLICATION INFORMATION

The values for the external components are determined as follows:

Current limit input threshold, $$V_{TH} = \frac{1000}{R1}$$

C_S is determined by the current loop dynamics

Peak current to load, $$I_P \cong \frac{V_{TH}}{R_{SC}} + \frac{V_O}{R_{SC}}\left(\frac{R2}{R2+R3}\right)$$

Short circuit current, $$I_{SC} = \frac{V_{TH}}{R_{SC}}$$

Low output voltage limit, $$V_{O(low)} = \frac{2.5(R4+R5+R6)}{R5+R6}$$

High output voltage limit, $$V_{O(high)} = \frac{2.5(R4+R5+R6)}{R6}$$

Voltage sensing delay, $t_D = 10{,}000C_d$

SCR trigger power limiting resistor, $$R_G > \frac{V_{IN}-5}{0.2}$$

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

OTHER QUALIFIED VERSIONS OF UC2543, UC2543M, UC3543M :
