SLUS352C – JANUARY 1997 – REVISED DECEMBER 2015

UCx846/7 Current Mode PWM Controller

1 Features

- Automatic Feedforward Compensation
- Programmable Pulse-by-Pulse Current Limiting
- Automatic Symmetry Correction in Push-Pull Configuration
- Enhanced Load Response Characteristics
- Parallel Operation Capability for Modular Power Systems
- Differential Current Sense Amplifier with Wide Common Mode Range
- Double-Pulse Suppression
- 500-mA (Peak) Totem-pole Outputs
- ±1% Band Gap Reference
- Undervoltage Lockout
- Soft-Start Capability
- Shutdown Terminal
- 500-kHz Operation

2 Applications

- Telecommunication Power Converters
- Industrial Power Converters

3 Description

The UC1846/7 family of control devices provides all of the necessary features to implement fixed-frequency, current-mode control schemes while maintaining a minimum external parts count. The superior performance of this technique can be measured in improved line regulation, enhanced load response characteristics, and a simpler, easier-to-design control loop. Topological advantages include inherent pulse-by-pulse current limiting capability, automatic symmetry correction for push-pull converters, and the ability to parallel *power modules* while maintaining equal current sharing.

Protection circuitry includes built-in undervoltage lockout and programmable current limit, in addition to soft-start capability. A shutdown function is also available, which can initiate either a complete shutdown with automatic restart or latch the supply off.

Other features include fully-latched operation, double-pulse suppression, deadline adjust capability, and a ±1% trimmed band gap reference.

The UC1846 features low outputs in the OFF state, while the UCx847 features high outputs in the OFF state.

Device Information[1]

PART NUMBER	PACKAGE	BODY SIZE (NOM)
UC1846	LCCC (20)	8.89 mm × 8.89 mm
	CDIP (16)	6.92 mm × 19.56 mm
UC2846, UC3846	PLCC (20)	8.96 mm × 8.96 mm
	SOIC (16)	7.5 mm × 10.3 mm
	PDIP (16)	6.35 mm × 19.3 mm
UC2847, UC3847	SOIC (16)	7.5 mm × 10.3 mm
	PDIP (16)	6.35 mm × 19.3 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

	MIN	MAX	UNIT
Supply Voltage (Pin 15)		40	V
Collector Supply Voltage (Pin 13)		40	V
Output Current, Source or Sink (Pins 11, 14)		500	mA
Analog Inputs (Pins 3, 4, 5, 6, 16)	–0.3	$+V_{IN}$	V
Reference Output Current (Pin 2)		–30	mA
Sync Output Current (Pin 10)		–5	mA
Error Amplifier Output Current (Pin 7)		–5	mA
Soft Start Sink Current (Pin 1)		50	mA
Oscillator Charging Current (Pin 9)		5	mA
Power Dissipation at T_A = 25°C		1000	mW
Power Dissipation at T_C = 25°C		2000	mW
Storage temperature, T_{stg}	–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±2500	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101(2)	±1500	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

	MIN	NOM	MAX	UNIT
VREF terminal external capacitance	1		2.2	µF

6.4 Thermal Information

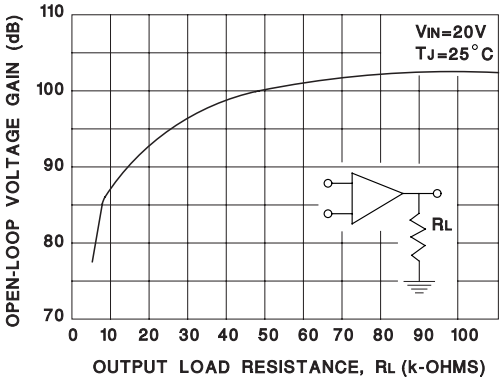

Figure 2. Error amplifier Open-Logic DC Gain vs Load Resistance

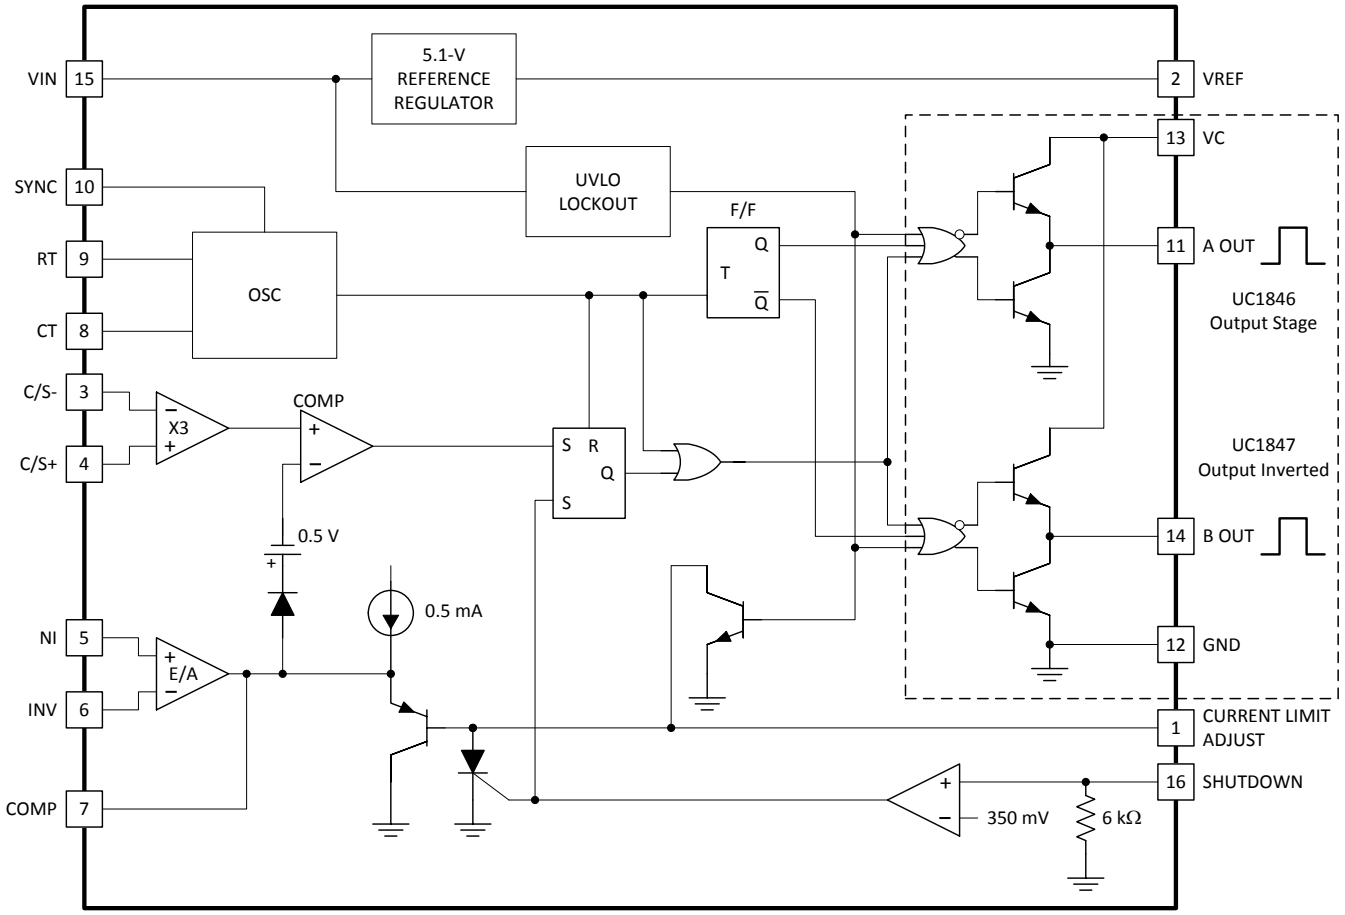
7 Detailed Description

7.1 Overview

The UCx846/7 family of control devices provides the necessary features to implement off-line or DC-to-DC fixed-frequency, current-mode control schemes with a minimal external parts count. Internally implemented circuits include under-voltage lockout featuring start-up current less than 1 mA, a precision reference trimmed for accuracy at the error amplifier input, logic to insure latched operation, a PWM comparator which also provides current limit control, and a totem pole output stage designed to source or sink high-peak current. The output stage, suitable for driving either N-Channel MOSFETs or bipolar transistor switches, is low in the off state.

7.2 Functional Block Diagram

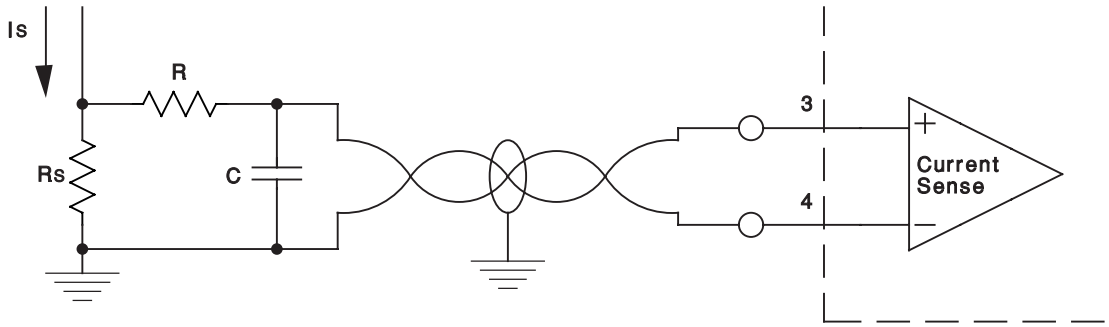


7.3 Feature Description

7.3.1 Current Sense Amplifier

The current sense amplifier may be used in a variety of ways to sense peak switch current for comparison with an error voltage. Referring to *Functional Block Diagram*, maximum swing on the inverting input of the PWM comparator is limited to approximately 3.5 V by the internal regulated supply. Accordingly, for a fixed gain of 3, maximum differential voltages must be kept below 1.2 V at the current sense inputs.

Feature Description (continued)



A small RC filter may be required in some applications to reduce switch transients. Differential input allows remote, noise free sensing.

Figure 3. Current Sense Amplifier Connection

7.3.2 Oscillator

By implementing the oscillator using all NPN transistors, the UCx846/7 achieves excellent temperature stability and waveform clarity at frequencies in excess of 1 MHz.

Referring to Figure 4, an external resistor R_T is used to generate a constant current into a capacitor C_T to produce a linear sawtooth waveform. Oscillator frequency may be approximated by selecting R_T and C_T such that:

$$f_{OSC} = \frac{2.2}{R_T C_T} \quad (1)$$

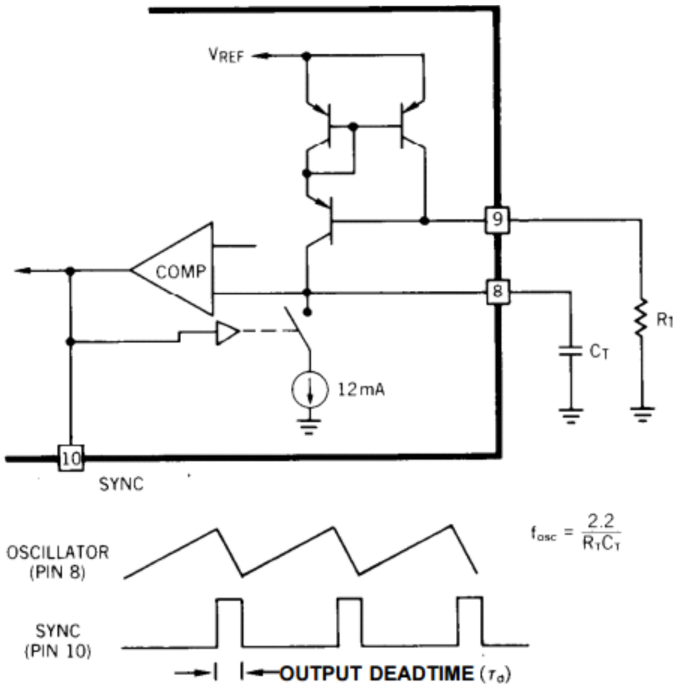


Figure 4. Oscillator Circuit

7.4 Device Functional Modes

7.4.1 Current Limit

One of the most attractive features of a current-mode converter is the ability to limit peak-switch currents on a pulse-by-pulse basis by simply limiting the error voltage to a maximum value.

7.4.2 Shutdown

The shutdown circuit was designed to provide a fast acting general purpose shutdown port for use in implementing both protection circuitry and remote shutdown functions. The circuit may be divided into an input section consisting of a comparator with a 350-mV temperature compensated offset, and an output section consisting of a three transistor latch. Shutdown is accomplished by applying a signal greater than 350 mV to pin 16, causing the output latch to fire, and setting the PWM latch to provide an immediate signal to the outputs.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The UCx846/7 family of control devices provides all of the necessary features to implement fixed frequency, current mode control schemes while maintaining a minimum external parts count. The superior performance of this technique can be measured in improved line regulation, enhanced load response characteristics, and a simpler, easier to design control loop. Topological advantages include inherent pulse-by-pulse current limiting capability, automatic symmetry correction for push-pull converters. Protection circuitry includes undervoltage lockout and programmable current limit in addition to soft-start capability. A shutdown function is also available which initiates either a complete shutdown with automatic restart or latch the supply off.

8.2 Typical Application

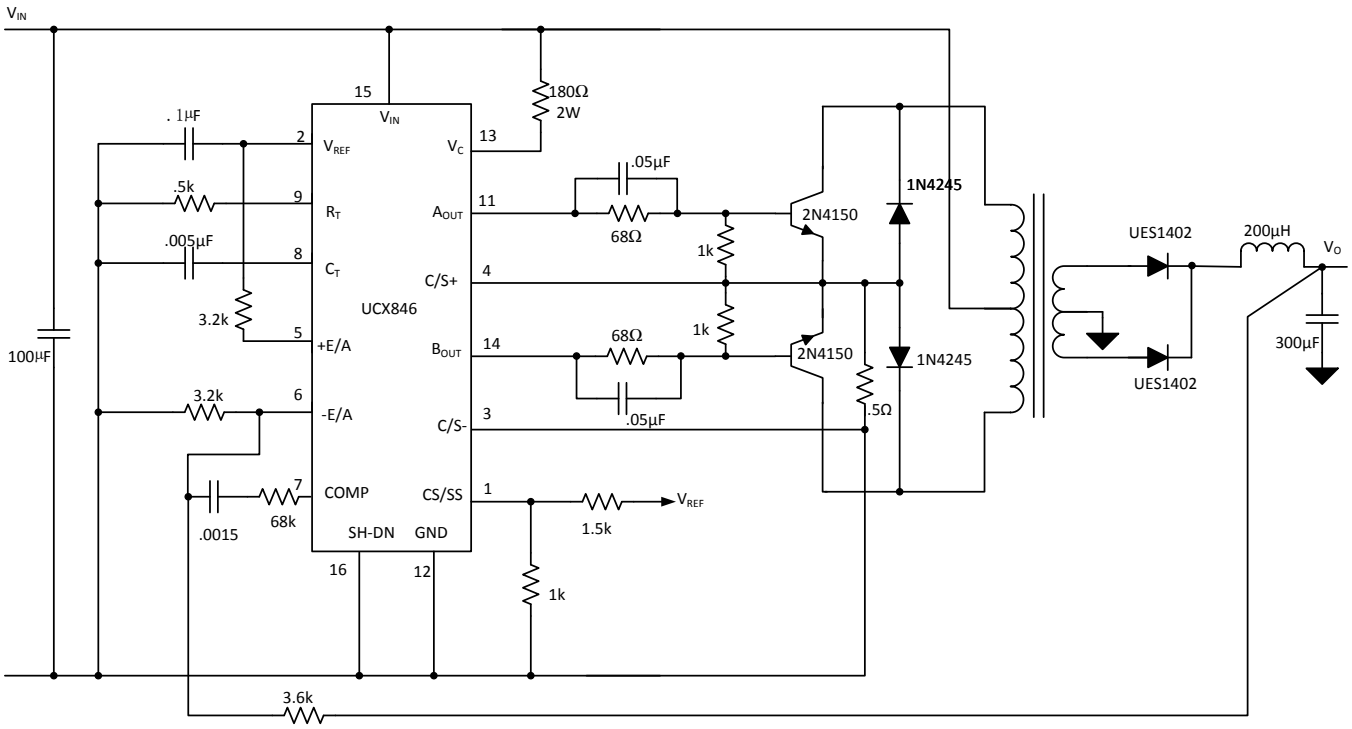

Figure 5. Typical Application Diagram

8.2.1 Design Requirements

Table 1 shows the design parameters for this application.

Table 1. Design Parameters

DESIGN PARAMETER	TARGET VALUE
Typical efficiency	85%
Switching frequency	880 kHz
Pulse by pulse current limit threshold	1 A

8.2.2 Detailed Design Procedure

This section details the design procedure based on the design requirements.

8.2.2.1 Design Switching Frequency

Output deadtime is determined by the external capacitor, C_T, according to the formula:

$$Td(\mu s) = 145\,C_T(\mu F)\left[\frac{ID}{ID - \frac{3.6}{RT(k\Omega)}}\right] \quad (2)$$

where

- ID = Oscillator discharge current at 25°C; typically is 7.5.

For large values of R_T: τd (μs) ≈145CT (μF).

Oscillator frequency is approximated by the formula:

$$fT(kHz) \approx \frac{2.2}{\left(R_T(k\Omega) \times C_T(\mu F)\right)} \quad (3)$$

8.2.2.2 Error Amplifier Output Configuration

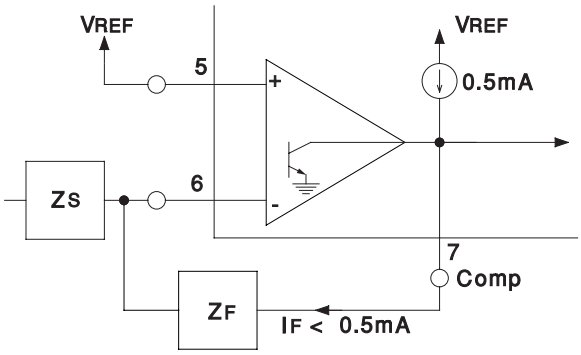

Figure 6. Error Amplifier Output Configuration

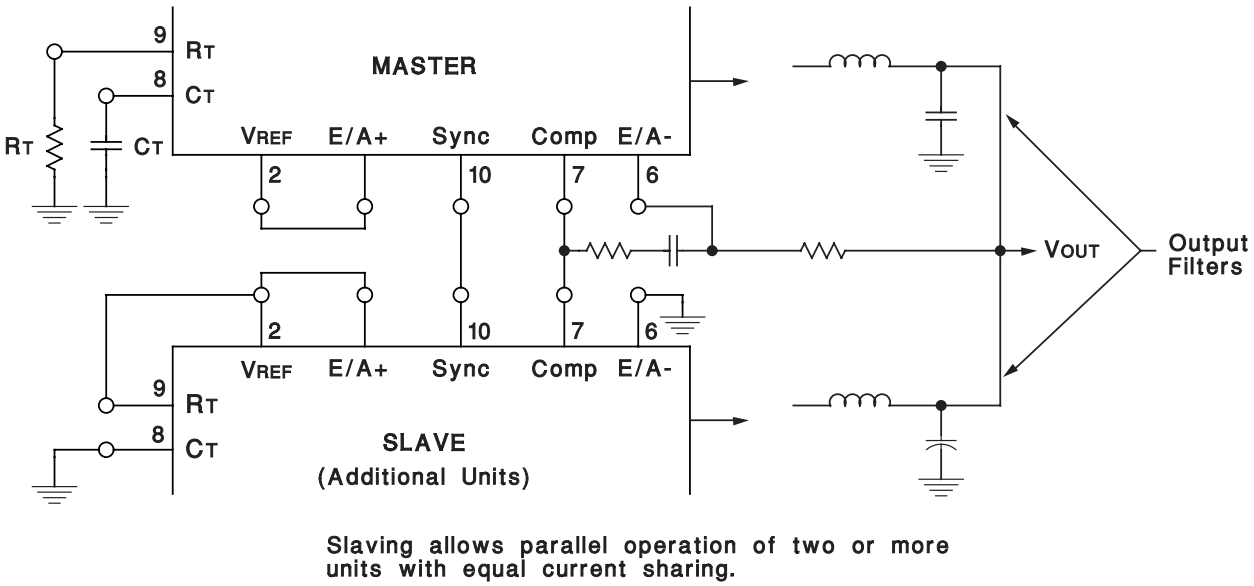
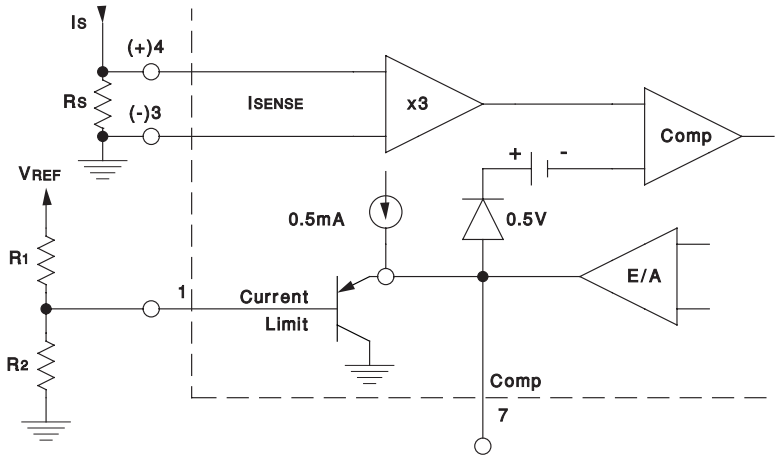
8.2.2.3 Parallel Operation Configuration



Slaving allows parallel operation of two or more units with equal current sharing.

Figure 7. Parallel Operation

8.2.2.4 Design Pulse by Pulse Current Limit Threshold



Peak Current (Is) is determined by the formula: $IS = \frac{\frac{R2\,VREF}{R1 + R2} - 0.5}{3RS}$

Figure 8. Pulse by Pulse Current Limiting

9 Power Supply Recommendations

The VIN power terminal for the device requires the placement of low esr noise-decoupling capacitance as directly as possible from the VIN terminal to the GND terminal. Ceramic capacitors with stable dielectric characteristics over temperature are recommended, such as X7R or better.

The VC power terminal for the device requires the placement of resistance as directly as possible from the VC terminal to the VIN terminal.

10 Layout

10.1 Layout Guidelines

- Place a low ESR and ESL decoupling capacitor C_{REF} in the 1-µF to 2.2-µF range, preferably ceramic, from VREF pin to GND.
- The EA+ is a non-inverting input, the EA– is an inverting input and the COMP is the output of the error amplifier. Place resistor and capacitor series network between EA+ pin and COMP pin, and reduce the trace of resistor and capacitor series network as much as possible.
- Place a low ESR and ESL capacitor C_T, preferably ceramic, from CT pin to GND, and place C_T close to UCx846/7 as much as possible.
- Place a resistor R_T from RT pin to GND, and place R_T close to UCx846/7 as much as possible.

10.2 Layout Example

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

OTHER QUALIFIED VERSIONS OF UC1846, UC2846, UC2846M, UC3846 :

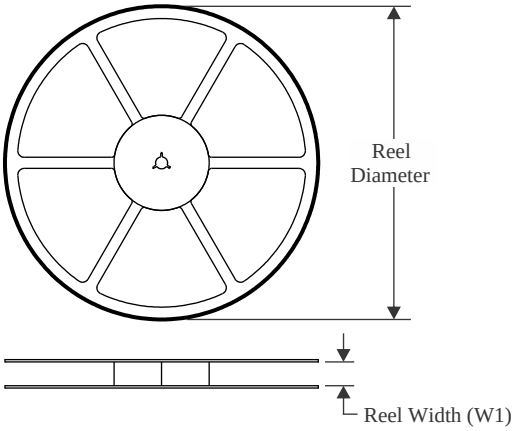
- Catalog : UC3846, UC2846
- Enhanced Product : UC1846-EP, UC1846-EP
- Military : UC2846M, UC1846
- Space : UC1846-SP, UC1846-SP

NOTE: Qualified Version Definitions:

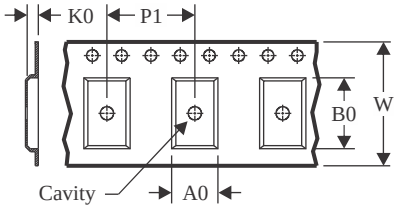
- Catalog - TI's standard catalog product
- Enhanced Product - Supports Defense, Aerospace and Medical Applications
- Military - QML certified for Military and Defense Applications
- Space - Radiation tolerant, ceramic packaging and qualified for use in Space-based application

TAPE AND REEL INFORMATION

REEL DIMENSIONS



TAPE DIMENSIONS



A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers
