

Temperature and Humidity Sensing

ABSTRACT

This report covers the radiation characterization results of the TMP9R00-SP. The study helps determine the Total Ionizing Dose (TID) effects under high dose rate (HDR) up to 100 krad (Si). The results show that all samples passed within the specified limits up to 100 krad(Si).

The [Appendix](#) provides the TMP9R00-SP TID LDR and HDR reports.

1 Device Information

1.1 Product Description

The TMP9R00-SP device is a radiation-hardened, multi-zone, high-accuracy, low-power temperature sensor using a two-wire, SMBus or I2C compatible interface. Up to eight remote and one local temperature zones can be monitored simultaneously, aggregating the temperature measurements in a system reducing design complexity. Typical use cases are monitoring temperature of different high-power devices, such as MCUs, GPUs, ADCs, DACs and FPGAs. Advanced features such as series resistance cancellation, programmable ideality factor, temperature offset correction, and temperature limits are included to provide a robust thermal monitoring solution.

Each remote channel and the local channel have two independently-programmable thresholds that trigger when the corresponding temperature exceeds the limit. A programmable hysteresis setting is available to avoid toggling around the threshold.

The TMP9R00-SP device provides high accuracy ($\pm 1.5^\circ\text{C}$) and high resolution (0.0625°C) measurement capabilities. The device supports low-voltage rails (1.7 V to 2.0 V), common two-wire interfaces (1.7 V to 3.6 V), and an operating temperature range from -55°C to 125°C and a remote junction temperature range from -55°C to 150°C .

1.2 Device Details

Table 1-1 lists the device information used in the initial TID characterization and qualification of HDR tests.

Table 1-1. Device and Exposure Details

TID HDR Details: 100 krad(Si)	
TI Device Number	TMP9R00-SP
Package	16-Pin HKT
Technology	LBC8LV
Die Lot Number	1408182
AT Lot Number, Date Code	2002440
Quantity Tested	54units
Lot Accept, Reject	Devices passed 100 krad(Si)
HDR Radiation Facility	Texas Instruments SVA Group, Santa Clara, CA
HDR Dose Level	3krad(Si), 10 krad(Si), 30 krad(Si), 50 krad(Si), 75 krad(Si), 100 krad(Si)
HDR Dose Rate	60 rad(Si)/s
HDR Radiation Source	Gammacell220 Excel (GC-220E) Co-60
Irradiation Temperature	Ambient, room temperature

2 Total Dose Test Setup

2.1 Test Overview

The TMP9R00-SP is irradiated up to 100 krad(Si) and then put through full electrical parametric testing on the production Automated Test Equipment (ATE). The device is functional and passes all electrical parametric tests with the readings within guard bands of the data sheet electrical specification limits.

The TMP9R00-SP LBC8LV process technology contains CMOS components. HDR tests were performed.

2.2 Test Description and Facilities

The TMP9R00-SP HDR exposure was performed on biased and unbiased devices in a Co-60 gamma cell at TI SVA facility in Santa Clara, California. The un-attenuated dose rate of this cell is 65 rad(Si)/s. After exposure, the devices were packed in dry ice (per MIL-STD-883 Method 1019.9 section 3.10) and returned to TI Dallas for a full post-radiation electrical evaluation using Texas Instruments ATE. ATE guard-band test limits are set within Standard Microcircuit Drawing (SMD) electrical limits to ensure a minimum Cpk and test error margin based on initial qualification and characterization data. Post radiation measurements were taken within 30 minutes of removal of the devices from the dry ice container. The devices were allowed to reach room temperature prior to electrical post radiation measurements.

The TMP9R00-SP low dose rate (LDR) exposure was performed on biased and unbiased devices in a Co60 gamma cell under a 10-mrad(Si)/s exposure rate. The dose rate of the irradiator used in the exposure ranges from < 10 mrad(Si)/s to a maximum of approximately 84 rad(Si)/s, determined by the distance from the source. For the LDR (10 mrad(Si)/s) exposure, the test box was positioned approximately 2 m from the source. The exposure boards are housed in a lead-aluminum box (as specified in MIL-STD-883 TM 1019.9) to harden the gamma spectrum and minimize dose enhancement effects. The irradiator calibration is maintained by Logmire Laboratories using Thermoluminescence Dosimeters (TLDs) traceable to the National Institute of Standards and Technology (NIST) and the dosimetry was verified using TLDs prior to the radiation exposures. ATE guard band test limits are set within SMD electrical limits to ensure a minimum Cpk and test error margin based on initial qualification and characterization data.

2.3 Test Setup Details

Biased HDR up to 100-krad(Si) exposure are also tested and the device is functional and passes the electrical test within the data sheet limit. The devices under LDR exposure are tested in unbiased and biased condition. Unbiased exposure means with all the pins grounded.

2.4 Test Configuration and Condition

HDR devices were stressed at 3 krad(Si), 10 krad(Si), 30 krad(Si), 50 krad(Si), 75 krad(Si), 100 krad(Si). LDR devices were stressed at 30 krad(Si), 75 krad(Si), and 100 krad(Si) for biased and unbiased conditions.

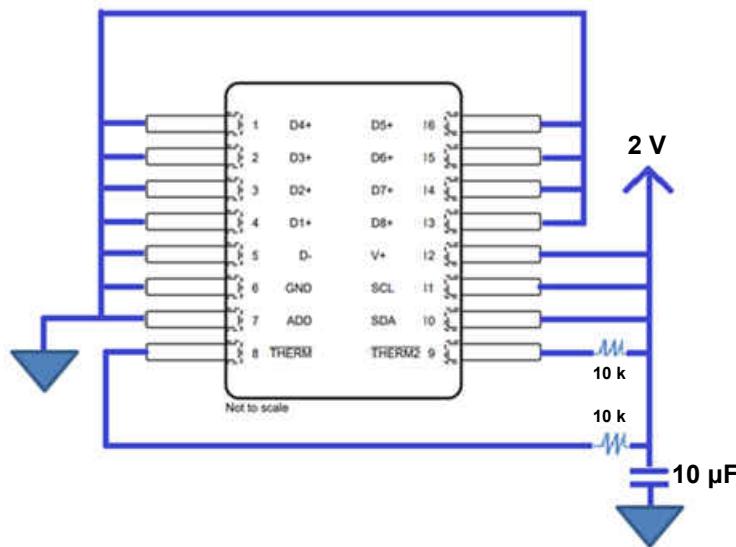

Figure 2-1. Bias Diagram Used in TID Exposure

Table 2-1. HDR \leq 50–100 rad(Si)/s Biased Device Information (HDR)

Exposure Levels			
Total sample size : 54			
3 krad(Si)	10 krad(Si)	30 krad(Si)	50 krad(Si)

Exposure Levels			
75 krad(Si)		100 krad(Si)	
1, 2, 3, 4, 5		11–32, 33–54	

Table 2-2. LDR = 60 mrad(Si)/s Biased Exposure Information (LDR)

Total Sample Size: 16		
Exposure Levels		
50 krad(Si)	75 krad(Si)	100 krad(Si)
25a–30a	32a–37a	41a–44a

3 Tested Parameters

HDR devices were stressed at 3 krad(Si), 10 krad(Si), 30 krad(Si), 50 krad(Si), 75 krad(Si), 100 krad(Si) for biased conditions. LDR devices were stressed at 30 krad(Si), 75 krad(Si), and 100 krad(Si) for biased and unbiased conditions.

4 Total Ionizing Dose Characterization Test Results

4.1 Total Ionizing Dose Characterization Summary Results

The following list summarizes the TID characterization results:

- The parametric data for the TMP9R00-SP passes up to 100-krad(Si) HDR.
- The TMP9R00-SP passes the post electrical test over all conditions below 100 krad(Si).
- Overall radiation performance is solid. There were no functional or parametric failures at any read point. All data sheet parameters pass at all exposure levels with margin. However, radiation end-point limits for the noted parameters are ensured only for the conditions as specified in MIL-STD-883, method 1019, condition A.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](#) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
