

PMP10091RevA Test Results

1	Startup	2
2	Shutdown	3
3	Efficiency	4
4	Load Regulation	5
5	Output Ripple Voltage	6
6	Input Ripple Voltage	7
7	Load Transients	8
7.1	Transient at the positive output	8
7.2	Transient at the negative output	9
8	Control Loop Frequency Response	10
9	Miscellaneous Waveforms	11
10	Thermal Image	14

Topology: Boost with +VOUT and -VOUT

Device: TPS40210

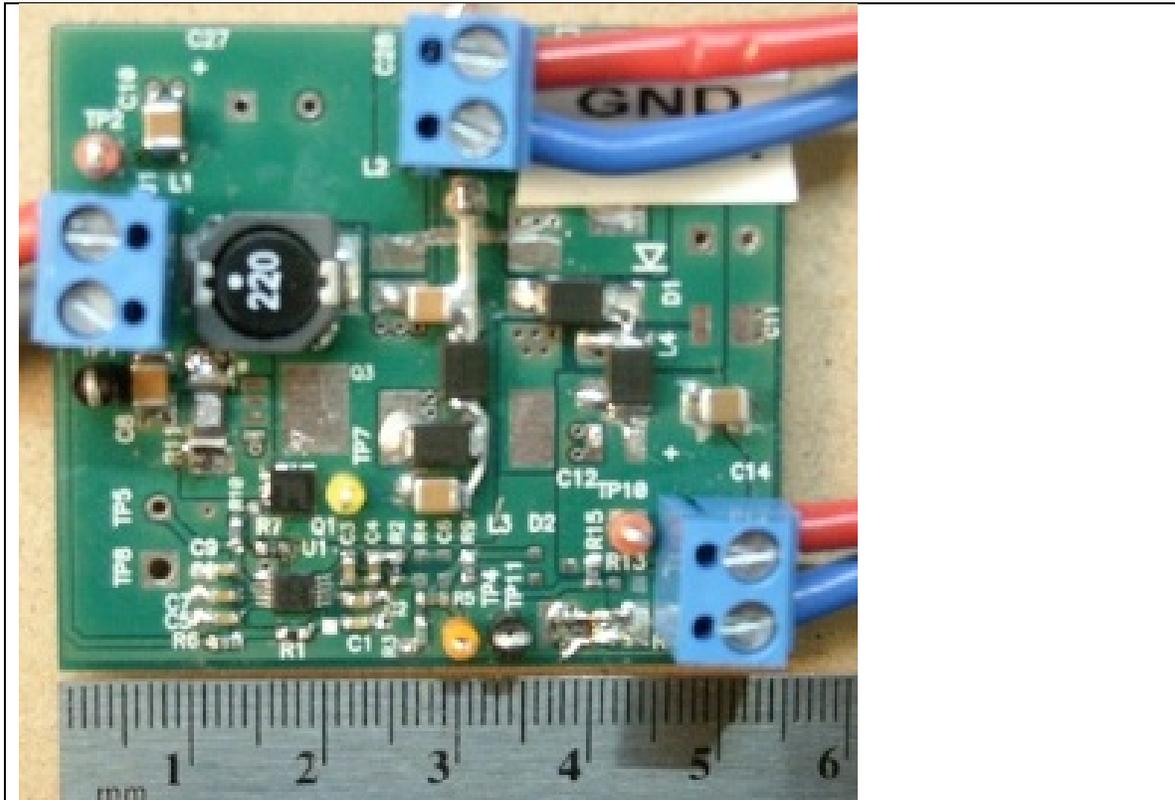

Figure 1

1 Startup

The startup waveform is shown in the Figure 2. The input voltage was set at 5V, with 250mA load at the outputs.

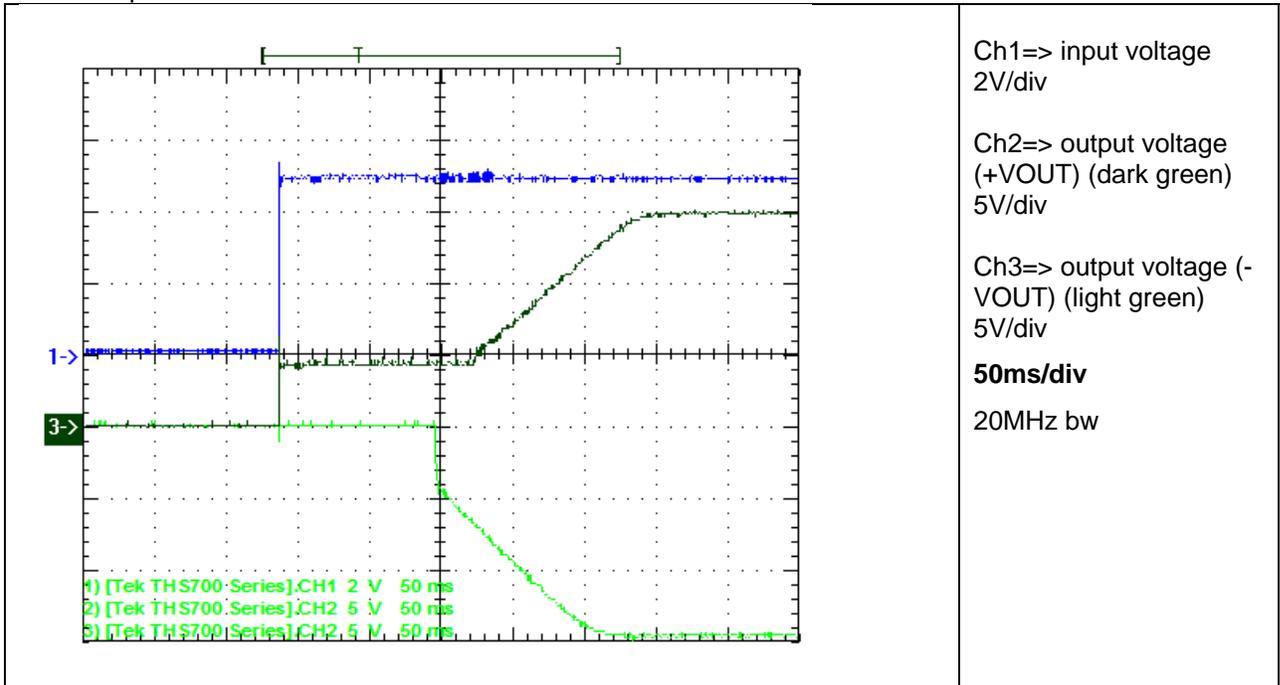

Figure 2

2 Shutdown

The shutdown waveform is shown in the Figure 3. The input voltage was set at 5V, with 250mA load on the outputs. The power supply was disconnected.

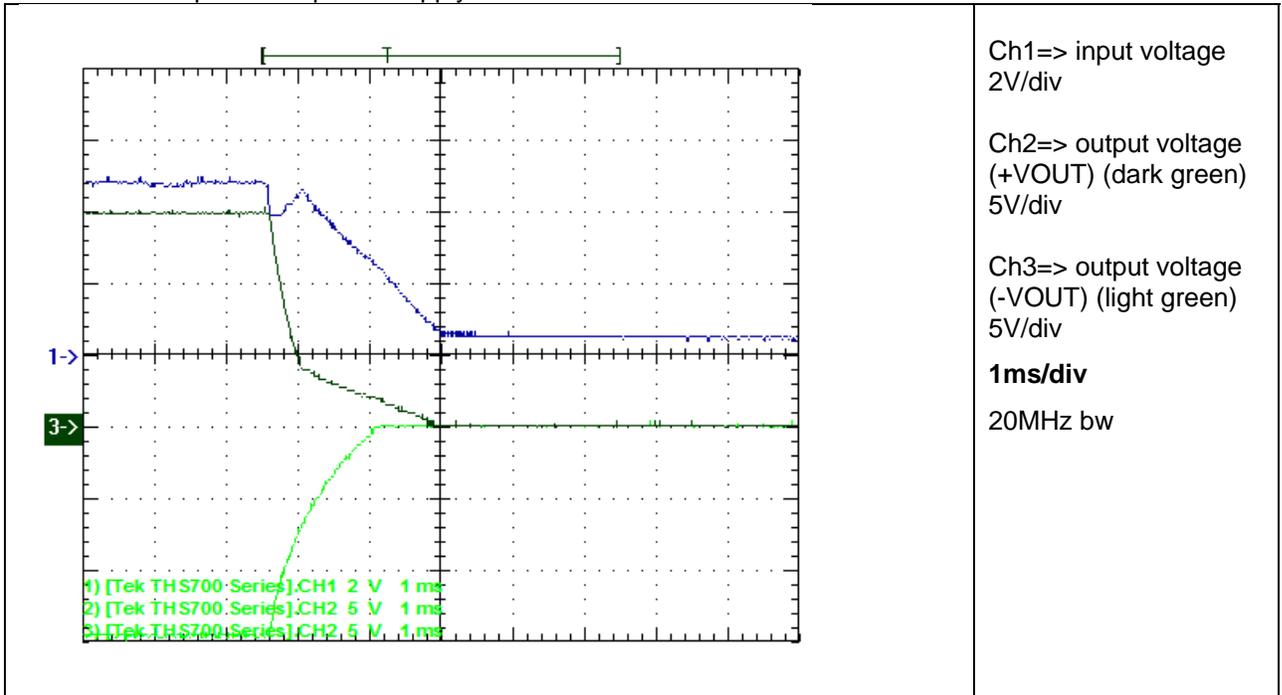

Figure 3

3 Efficiency

The efficiency is shown in the Figure 4 below. The input voltage was set 5V.

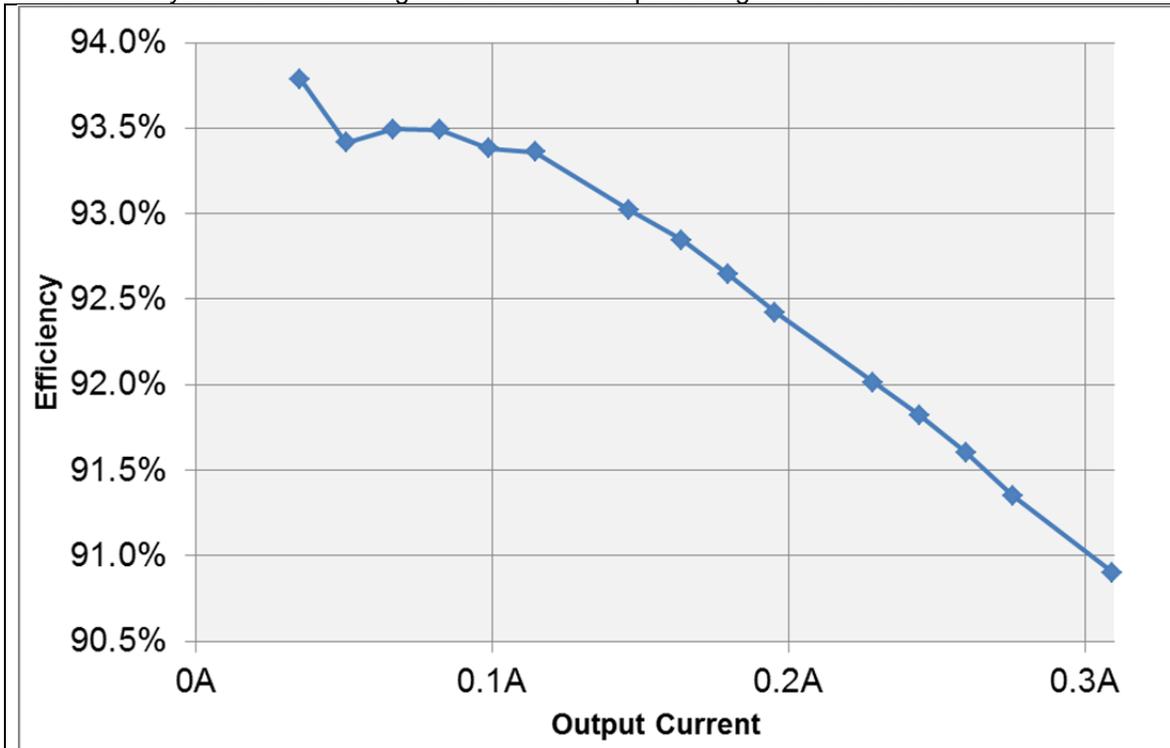

Figure 4

4 Load Regulation

The load regulation of the output is shown in the Figure 5 below. The input voltage was set to 5V.

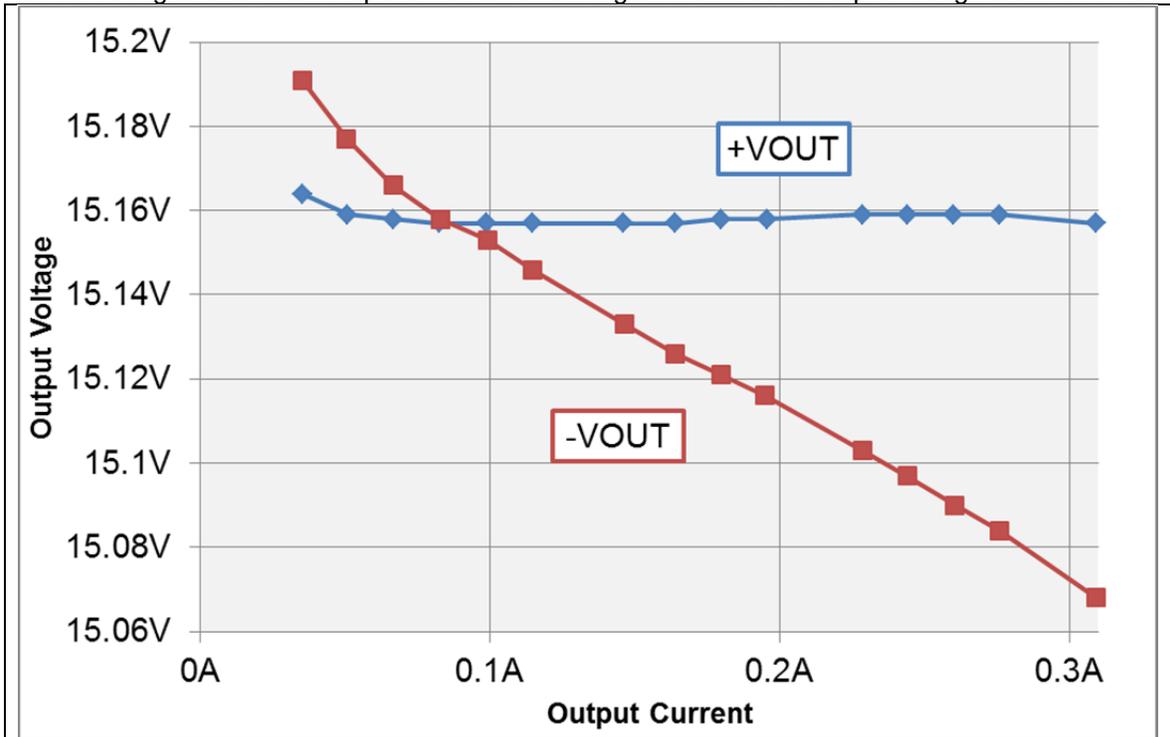

Figure 5

With no loads on the output the output voltages were +15.163V and -16.012V.

5 Output Ripple Voltage

The ripple voltage of the positive output is shown in Figure 6 (5V input, 2x300mA load).

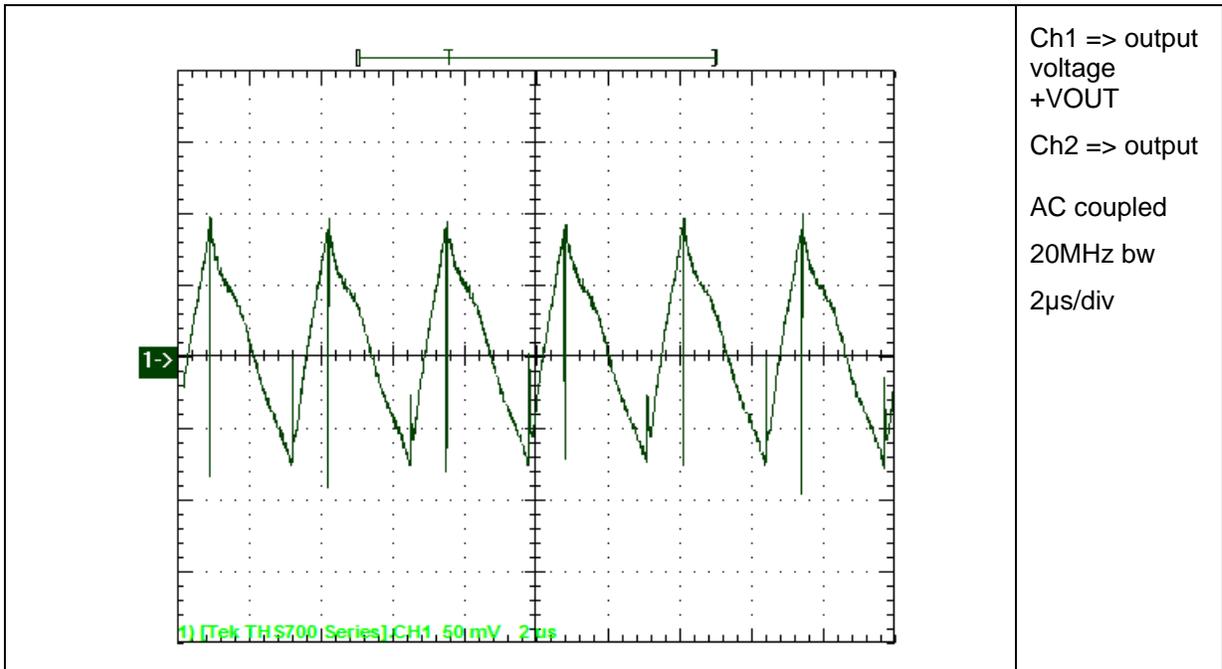

Figure 6

The ripple voltage of the negative output is shown in Figure 7 (5V input; 2x300mA output).

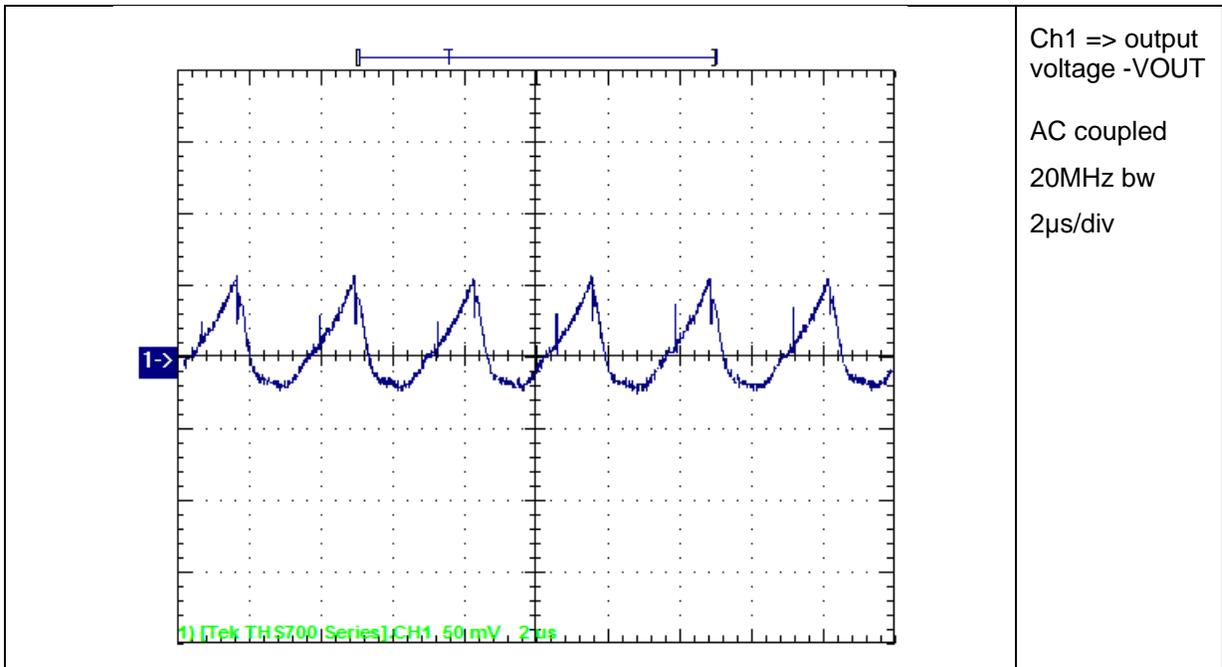

Figure 7

6 Input Ripple Voltage

The input ripple voltage is shown in Figure 8. (5V input; 2x300mA output).

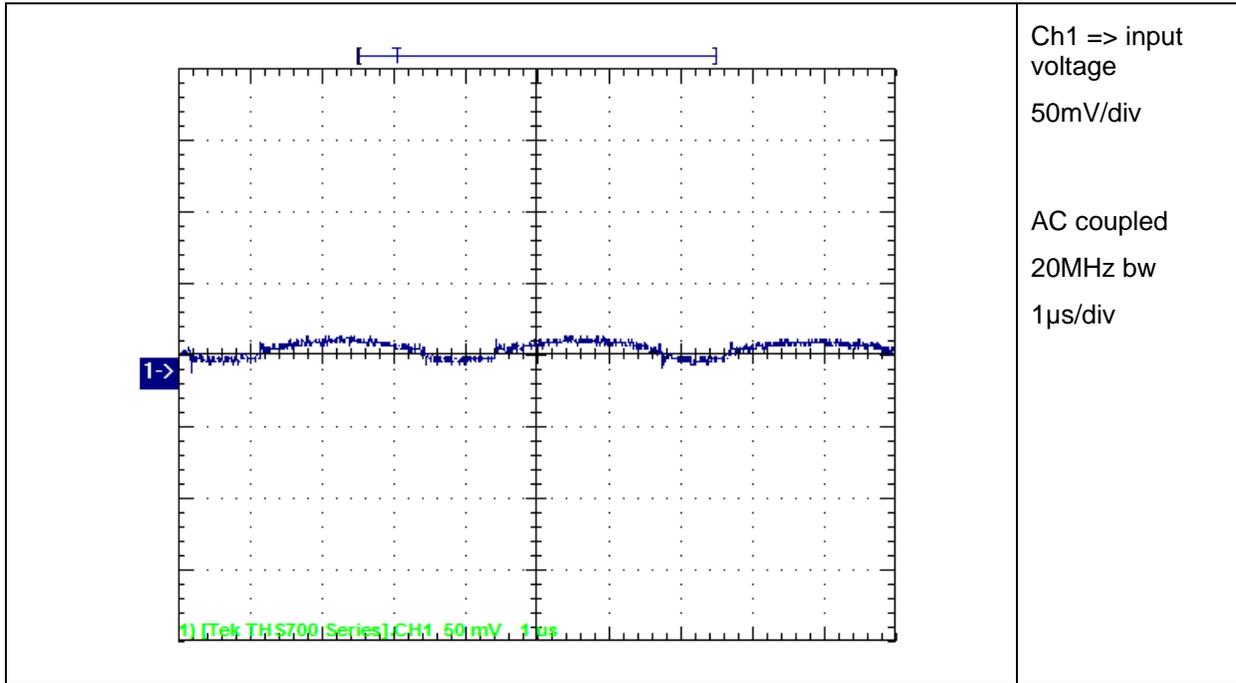

Figure 8

7 Load Transients

7.1 Transient at the positive output

The Figure 9 shows the response to load transients. The load is switching from 140mA to 410mA with a frequency of 100Hz. The input voltage was set to 5V

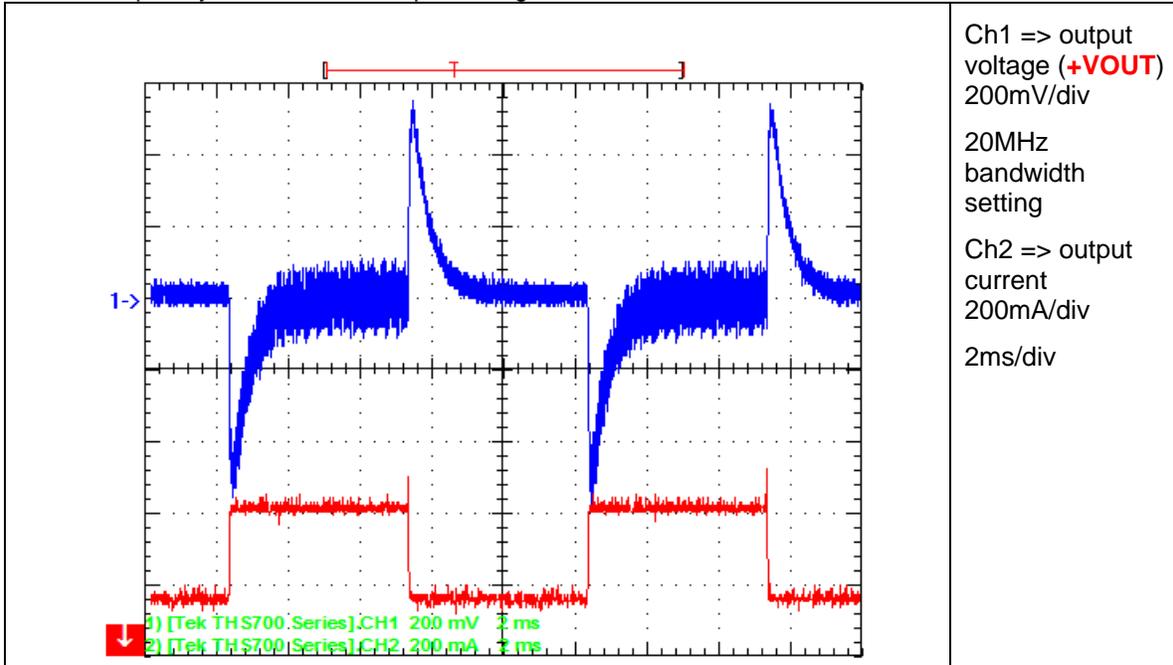

Figure 9

The Figure 10 shows the effect of a load transient at the positive output. The load is switching from 140mA to 410mA with a frequency of 100Hz. The input voltage was set to 5V

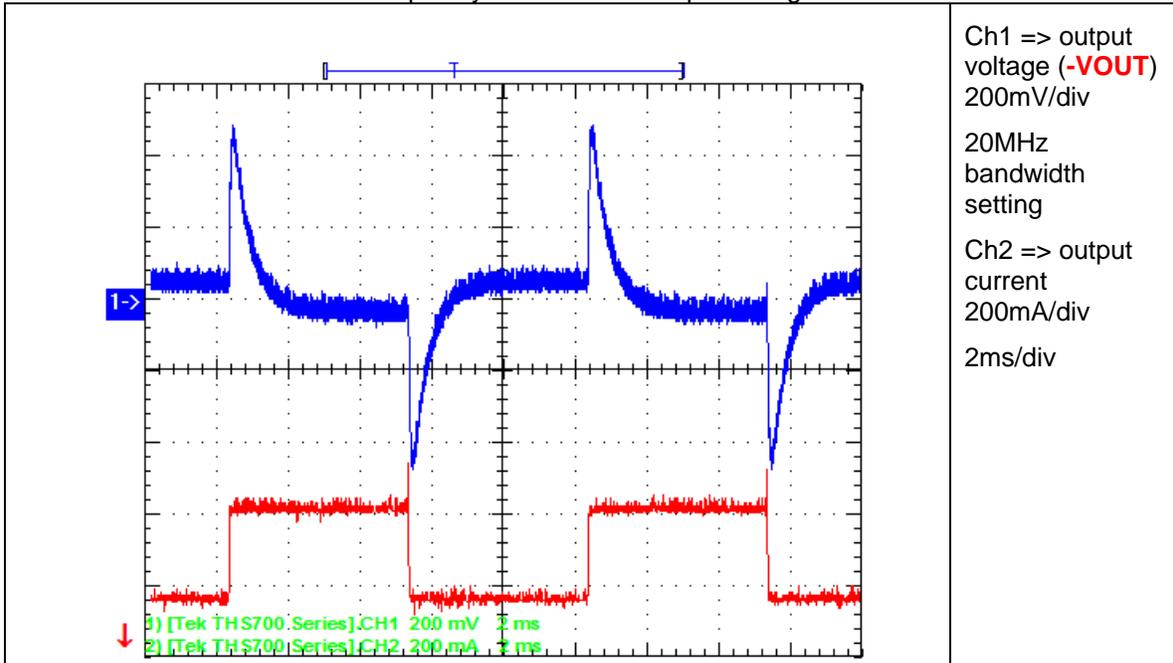

Figure 10

7.2 Transient at the negative output

The Figure 11 shows the effect of a load transients at the negative output. The load is switching from 140mA to 410mA with a frequency of 100Hz. The input voltage was set to 5V

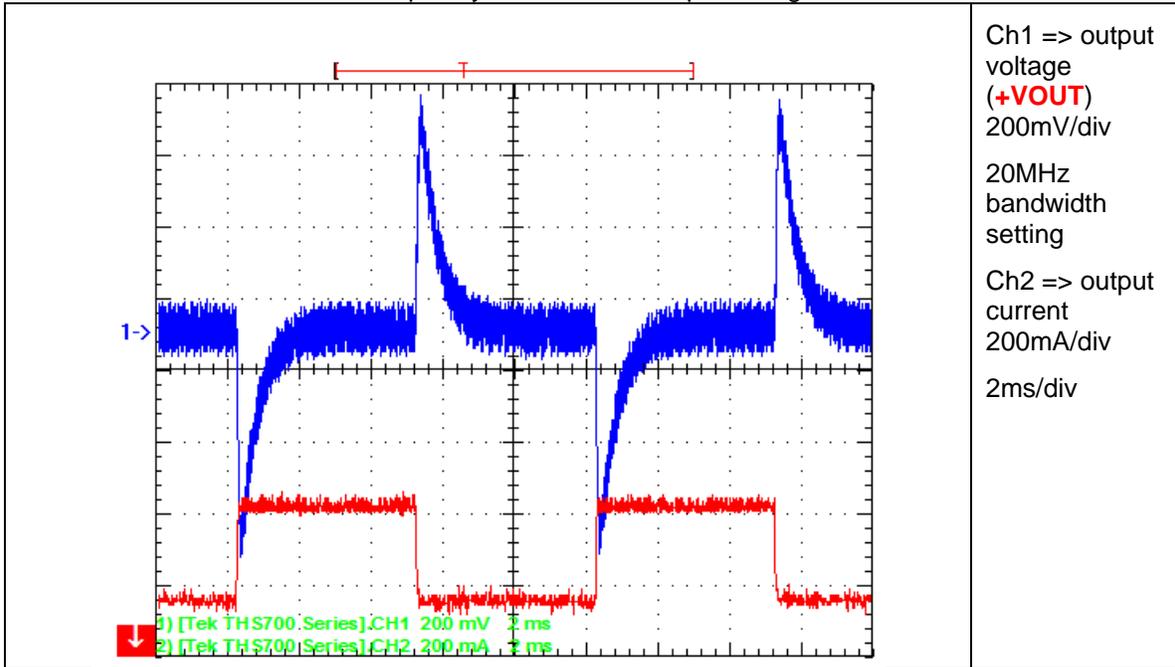

Figure 11

The Figure 12 shows the response to load transients. The load is switching from 140A to 410A with a frequency of 100Hz. The input voltage was set to 5V

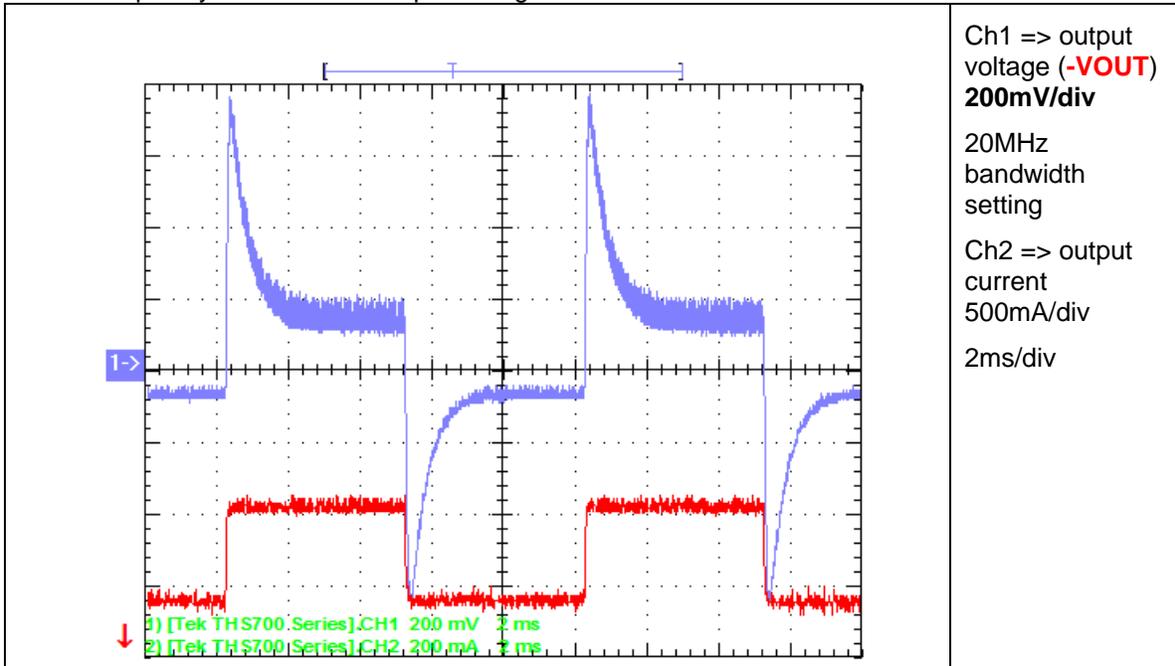

Figure 12

8 Control Loop Frequency Response

Figure 13 shows the loop response. 2x 300mA-load applied. The input voltage was set to 4.5V worst case.

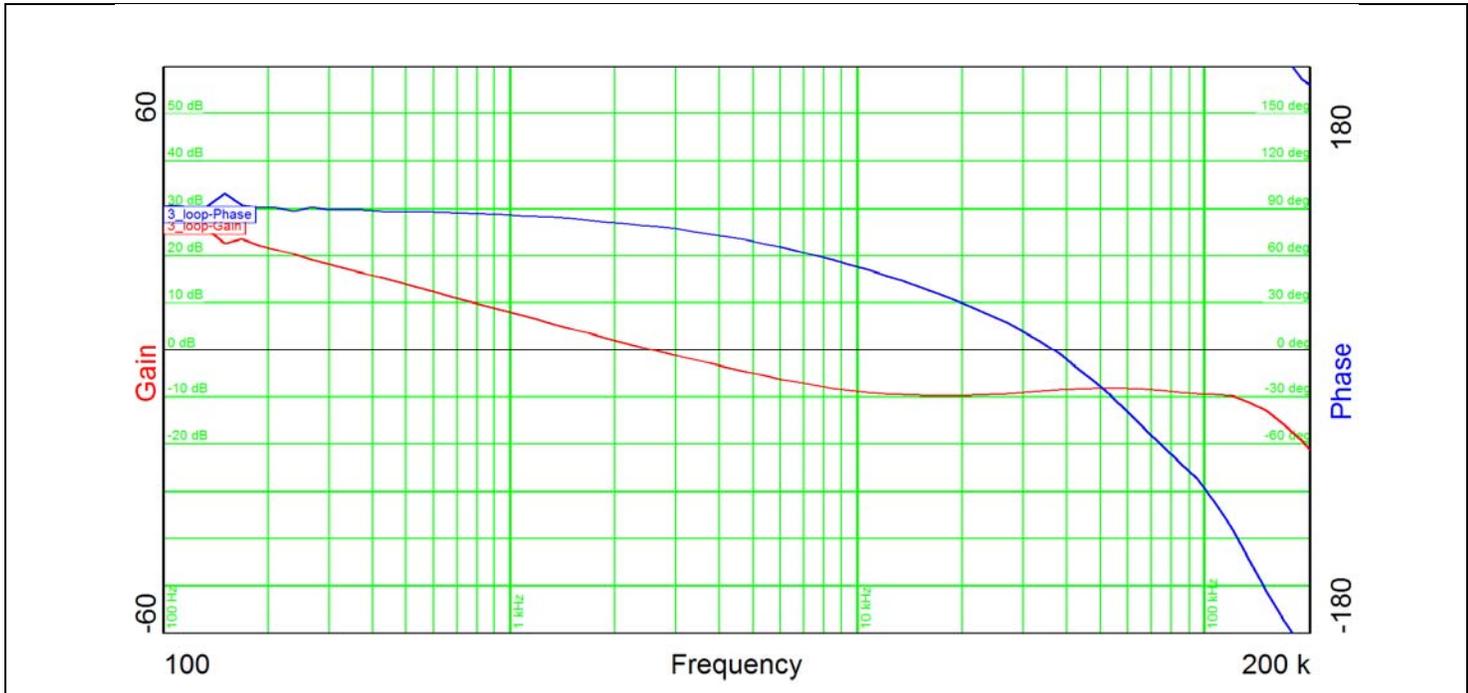

Figure 13

Table 1 summarizes the results from Figure 13.

Vin	4.5V
Bandwidth (kHz)	2.58
Phase margin	78.6°
slope (20dB/decade)	-0.97
gain margin (dB)	-8.69
slope (20dB/decade)	+0.31
freq (kHz)	36.4

Table 1

9 Miscellaneous Waveforms

The waveform of the voltage on switchnode (drain to source) is shown in Figure 14. Input voltage was set to 5V and output current to 2 x 300mA.

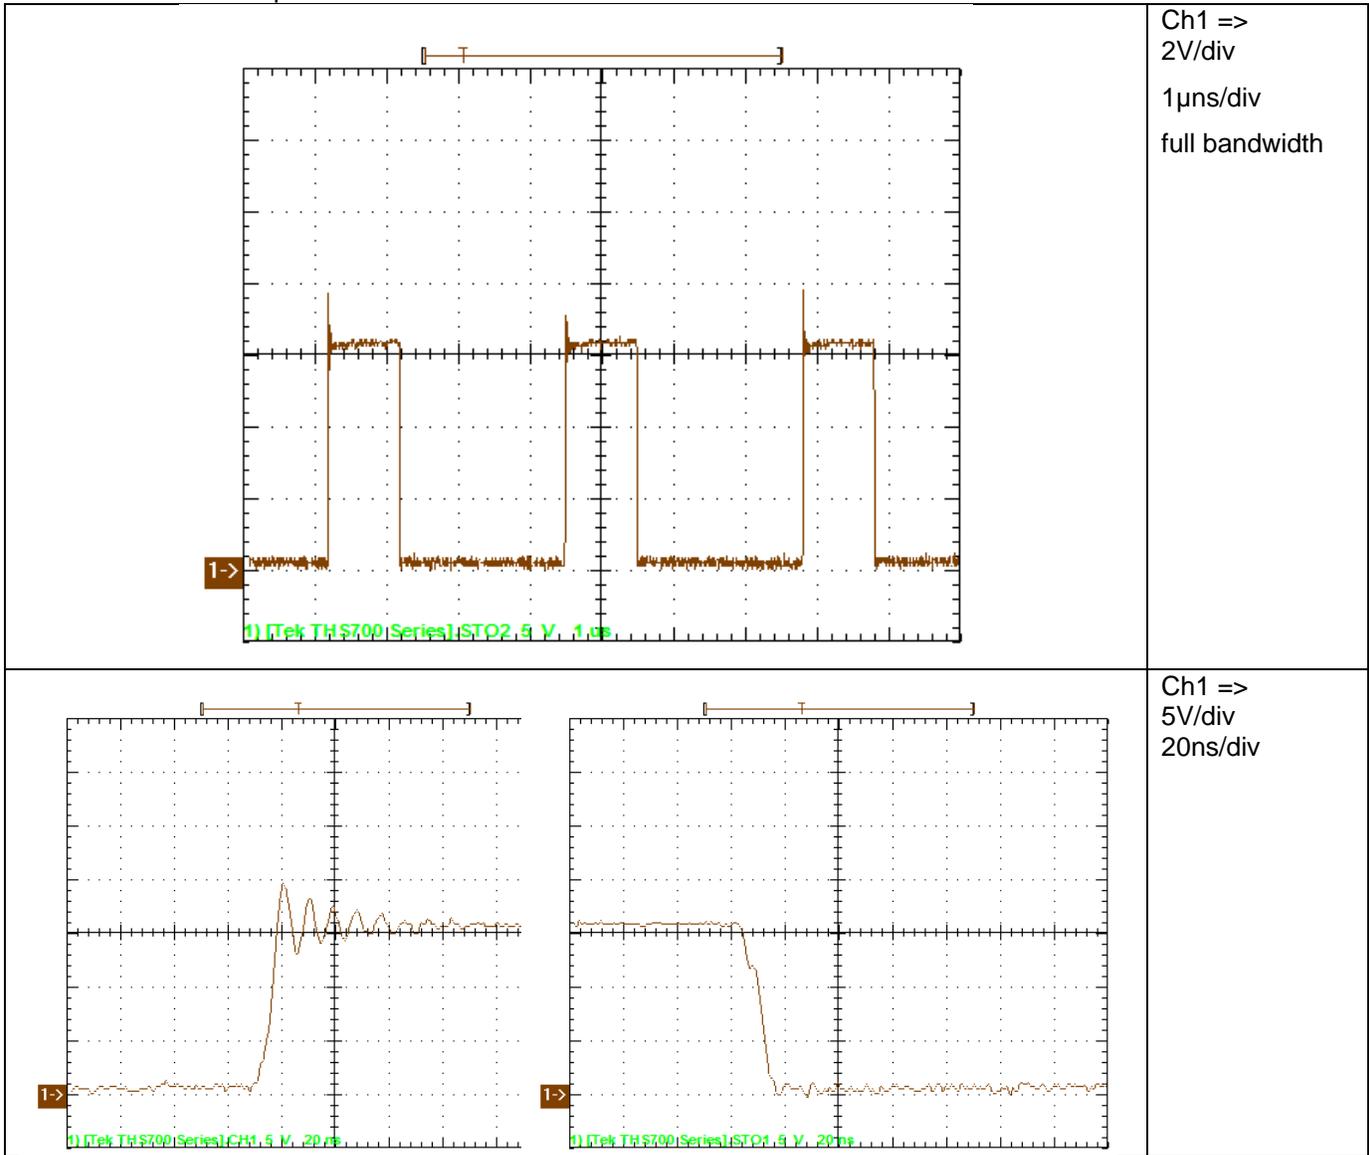

Figure 14

The waveform of the voltage on the gate to source is shown in Figure 15. Input voltage was set to 5V and output current to 2x300mA.

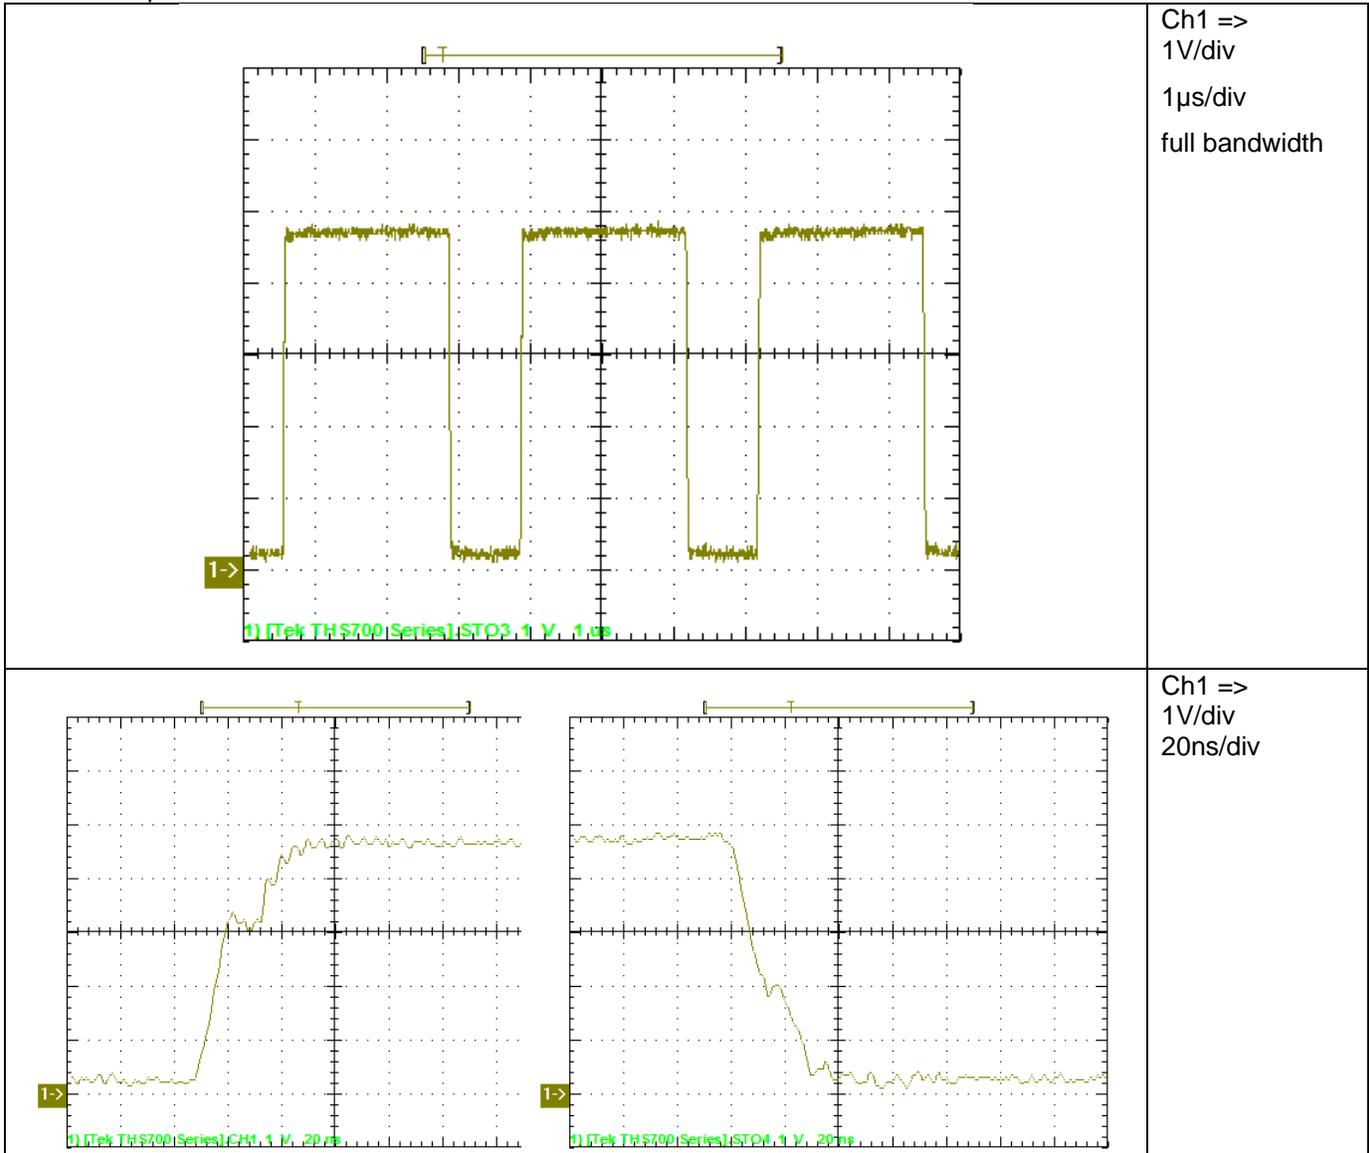

Figure 15

The waveform of the voltage on D103 is shown in Figure 16. Input voltage was set to 5 and output current to 2x300mA.

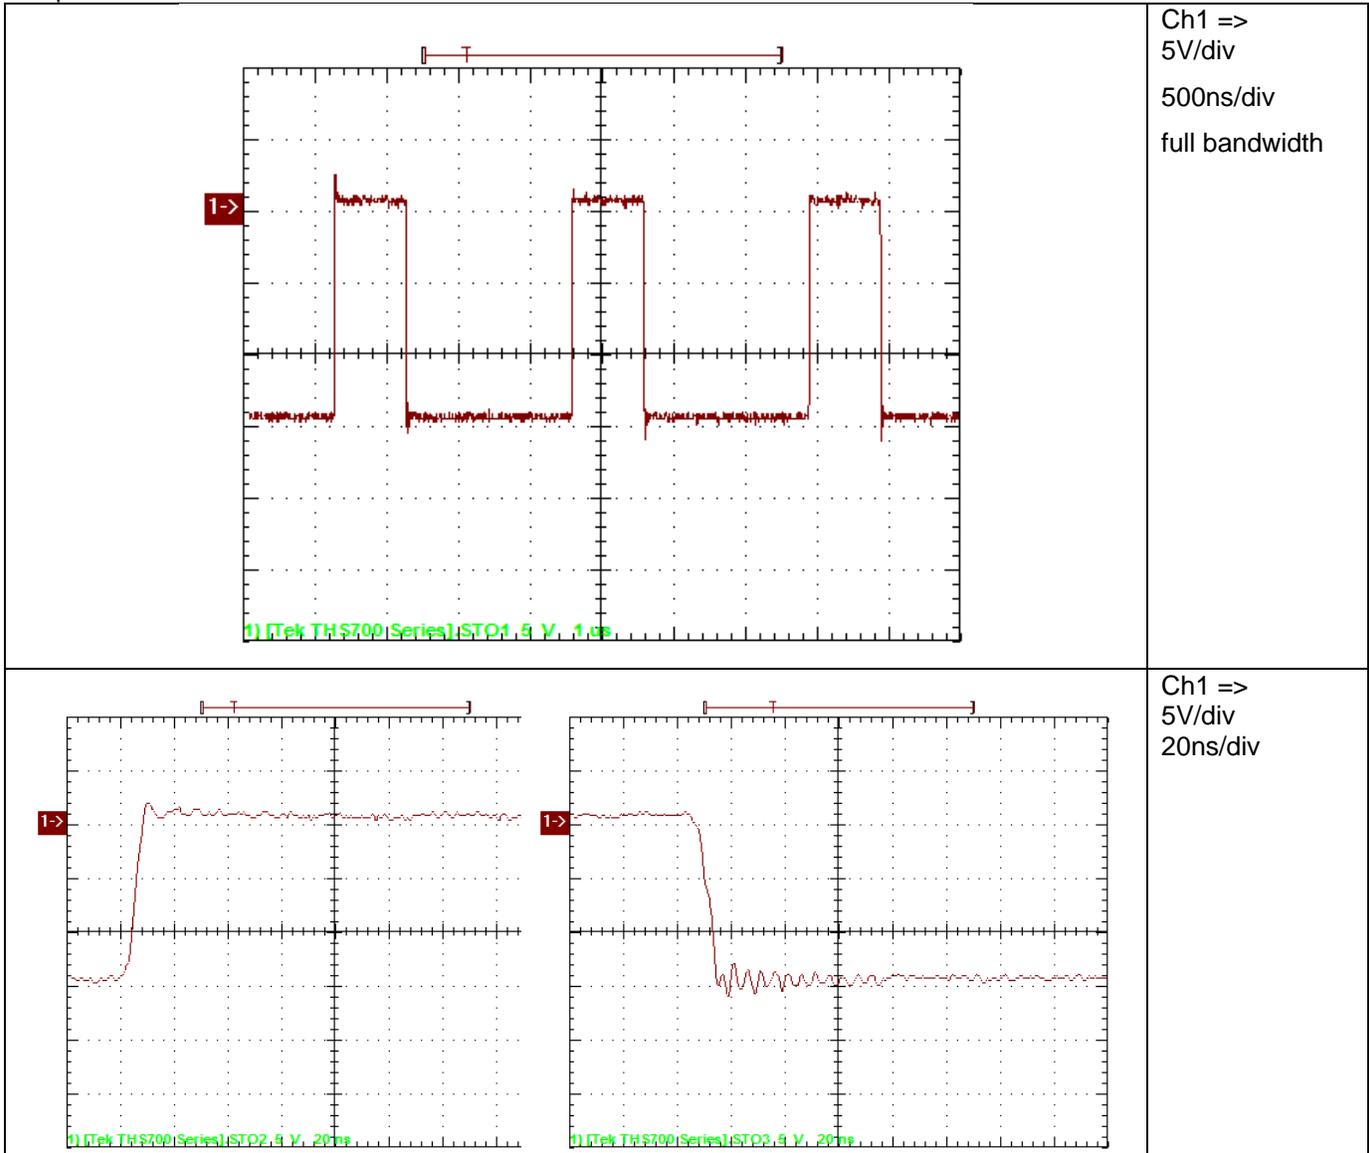

Figure 16

10 Thermal Image

Figure 17 shows the thermal image at full load, R11 is current sense resistor:

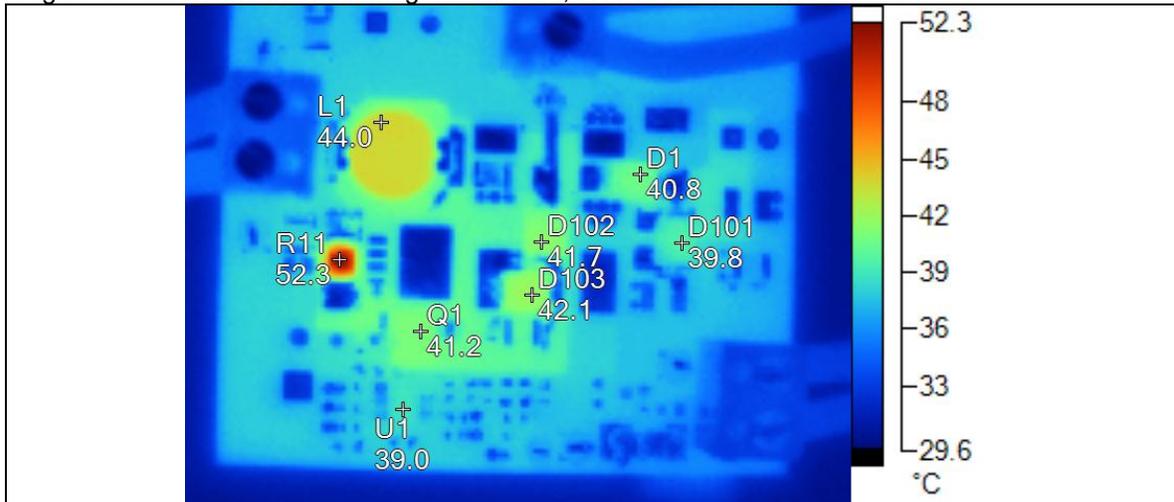

Figure 17

Name	Temperature
R11	52.3°C
L1	44.0°C
D103	42.1°C
D102	41.7°C
Q1	41.2°C
U1	39.0°C
D101	39.8°C
D1	40.8°C
