

CC335x SimpleLink™ 2.4GHz and 5GHz Dual-Band Wi-Fi 6 and Bluetooth® Low Energy Companion IC

1 Features

Key Features

- Wi-Fi 6 (802.11ax)
- Bluetooth® Low Energy 5.4 in CC3351 devices
- Companion IC to any processor or MCU host capable of running a TCP/IP stack
- Integrated 2.4GHz and 5GHz PA for a complete wireless solution with up to +20.5dBm output power.
- Operating temperature: –40°C to +105°C
- Application throughput up to 50Mbps

Extended Features

- Wi-Fi 6
 - 2.4GHz and 5GHz, 20MHz, single spatial stream
 - MAC, baseband, and RF transceiver with support for IEEE 802.11 a/b/g/n/ax
 - OFDMA, trigger frame, MU-MIMO (downlink), basic service set coloring, and target wake time (TWT) for improved efficiency
 - Hardware-based encryption and decryption supporting WPA2 and WPA3
 - Excellent interoperability
 - Support for 4-bit SDIO or SPI host interfaces
- Bluetooth Low Energy 5.4
 - LE coded PHYs (long range), LE 2M PHY (high speed), and advertising extension
 - Host controller interface (HCI) transport with option for UART or shared SDIO
- Enhanced security
 - Secured host interface
 - Firmware authentication
 - Anti-rollback protection
- Multirole support (for example, concurrent STA and AP) to connect with Wi-Fi devices on different RF channels (Wi-Fi networks)
- Optional antenna diversity or selection
- 3-wire or 1-wire PTA for external coexistence with additional 2.4GHz radios (for example, Thread or Zigbee)
- Power management
 - V_{MAIN} , V_{IO} , V_{pp} : 1.8V
 - V_{PA} : 3.3V
- Clock sources
 - 40MHz XTAL fast clock

- Internal slow clock or external 32.768kHz slow clock
- Small package size
 - Easy to design with 40-pin, 5mm × 5mm quad flat no-leaded (QFN) package, 0.4mm pitch

3 Description

The SimpleLink™ Wi-Fi™ CC33xx family of devices is where affordability meets reliability, enabling engineers to connect more applications with confidence. CC33xx are single-chip Wi-Fi 6 and Bluetooth Low Energy 5.4 devices. The CC3350 and CC3351 are the first dual-band devices in this pin-to-pin compatible family.

- [CC3350](#) : A 2.4GHz and 5GHz Wi-Fi 6 companion IC
- [CC3351](#) : A 2.4GHz and 5GHz Wi-Fi 6 and Bluetooth Low Energy 5.4 companion IC

The CC335x offers Wi-Fi 6 and BLE while maintaining compatibility with Wi-Fi 4 (802.11 a/b/g/n) and Wi-Fi 5 (802.11ac). These CC335x devices are the 10th-generation connectivity combination chip from Texas Instruments. As such, the CC335x is based on proven technology. These devices are ideal for cost-sensitive embedded applications with a Linux® or RTOS host running TCP/IP. CC335x brings the efficiency of Wi-Fi 6 to embedded device applications for the Internet of Things (IoT) with a small PCB footprint and a highly optimized bill of materials.

6 Specifications

All specifications are given at the CC335x pins. Typical values are measured with a nominal device at 25°C.

6.1 Absolute Maximum Ratings

Over operating free-air temperature range (unless otherwise noted)⁽¹⁾

PARAMETER		PINS	MIN	MAX	UNIT
V _{PA}	V _{DD} PA Voltage	39,40	−0.5	4.2 ⁽²⁾	V
V _{MAIN}	Main supply voltage for analog and digital - VDD_MAIN_IN, VDDA_IN1, VDDA_IN2	32, 4, 5	−0.5	2.1	V
V _{IO}	VDD IO Voltage	17	−0.5	2.1	V
	Input Voltage to all digital pins		−0.5	V _{IO} + 0.5	V
	HFXT_P Input Voltage	6	−0.5	2.1	V
V _{PP}	VPP OTP Voltage	35	−0.5	2.1	V
T _A	Operating Ambient Temperature		−40	105	°C
T _{stg}	Storage temperature		−55	155	°C

- (1) Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
- (2) Above 85°C, conditions beyond those indicated under *Recommended Operating Conditions* may cause permanent damage.

6.2 ESD Ratings

				VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	RF pins	±1000	V
			Other pins	±2000	
		Charged device model (CDM), per ANSI/ESDA/JEDEC JS-002 ⁽²⁾	RF pins	±250	
			Other pins	±500	

- (1) JEDEC document JEP155 states that 500V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

PARAMETER		PINS	MIN	TYP	MAX	UNIT
V _{MAIN}	Main supply voltage digital and analog - VDD_MAIN_IN, VDDA_IN1, VDDA_IN2	32,4,5	1.62	1.8	1.98	V
V _{PA}	DC supply rail for PA	39,40	3	3.3	3.6	
V _{IO}	DC supply rail for input/output	17	1.62	1.8	1.98	
V _{PP}	DC supply rail for OTP memory	35	1.62	1.8	1.98	V
T _A	Operating ambient temperature		−40		105 ⁽¹⁾	°C
	Maximum power dissipation				2	W

- (1) The CC3350 and CC3351 devices may operate at temperatures of up to 105°C. This allows the device to be used reliably in applications that may be exposed to higher ambient temperature over certain periods of the product's life. At temperatures higher than 85°C, the WLAN/BLE performance may degrade. For more information, reference this application note <https://www.ti.com/secureresources/CC33XX-THERMAL-GUIDELINES-NDA>.

6.4 Electrical Characteristics

PARAMETER	DESCRIPTION	TEST CONDITION	MIN	TYP	MAX	UNIT
V _{IH}	High Level Input Voltage		$0.65 \times V_{IO}$		V _{IO}	V
V _{IL}	Low Level Input Voltage		0		$0.35 \times V_{IO}$	
V _{OH}	High Level Output Voltage	at 4mA	$V_{IO} - 0.45$		V _{IO}	
V _{OL}	Low Level Output Voltage	at 4mA	0		0.45	

6.5 Thermal Resistance Characteristics

THERMAL METRIC ⁽¹⁾	DESCRIPTION		UNIT
R _{θJA}	Junction-to-ambient thermal resistance (According to JEDEC EIA/JESD 51 document)	30.5	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	16.7	
R _{θJB}	Junction-to-board thermal resistance	10	
Ψ _{JT}	Junction-to-top characterization parameter	0.1	
Ψ _{JB}	Junction-to-board characterization parameter	10	
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	1.7

6.19 Timing and Switching Characteristics

6.19.1 Power Supply Sequencing

For proper operation of the CC335x device, perform the recommended power-up sequencing as follows:

1. All supplies (VDD_MAIN_IN, VDDA, VIO, VPA) must be available before nReset is released.
2. For an external slow clock, confirm that the clock is stable before nReset is deasserted (high).
3. The nReset pin must be held low for at least 10μs after stabilization of the external power supplies.

6.19.2 Clocking Specifications

The CC335x device uses two clocks for operation:

- A fast clock running at 40MHz for WLAN/BLE functions
- A slow clock running at 32.768kHz for low-power modes

The slow clock can be generated internally or externally. The fast clock must be generated externally.

6.19.2.1 Slow Clock Generated Internally

To minimize external components, the slow clock can be generated by an internal oscillator. However, this clock is less accurate and consumes more power than sourcing the slow clock externally. For this scenario, leave the Slow_CLK_IN pin unconnected.

6.19.2.2 Slow Clock Using an External Oscillator

For the best power consumption, the slow clock can be generated externally by an oscillator or sourced from elsewhere in the system. The external source must meet the requirements listed below. This clock must be fed into the CC335x pin Slow_CLK_IN and must be stable before nReset is deasserted and the device is enabled.

6.19.2.2.1 External Slow Clock Requirements

PARAMETER	Description	MIN	TYP	MAX	UNIT
Input slow clock frequency	Square wave		32768		Hz
Frequency accuracy	Initial + temperature + aging			±250	ppm
Input Duty cycle		30%	50%	70%	
T_r/T_f	Rise and fall time			100	ns
V_{IL}	Input low level	0	$0.35 \times V_{IO}$		V
V_{IH}	Input high level	$0.65 \times V_{IO}$		1.95	V
	Input impedance	1			MΩ
	Input capacitance			5	pF

6.19.2.3 Fast Clock Using an External Crystal (XTAL)

The CC335x device supports a crystal-based fast clock (XTAL). The crystal is fed directly between HFXT_P and HFXT_M pins with compatible loading capacitors, and must meet the requirements below.

6.19.2.3.1 External Fast Clock XTAL Specifications

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Supported frequencies			40		MHz
Frequency accuracy	Initial + temperature + aging			±20	ppm
Load Capacitance, C_L ⁽¹⁾		5		13	pF
Equivalent series resistance, ESR				40	Ω
Drive level			100		uW

(1) Load capacitance, $C_L = [C1 \times C2] / [C1 + C2] + C_p$, where C1, C2 are the capacitors connected on HFXT_P and HFXT_M, respectively, and C_p is the parasitic capacitance (typically 1 to 2 pF). For example, for C1 = C2 = 6.2pF and C_p = 2pF, then C_L = 5pF.

6.20 Interface Timing Characteristics

6.20.1 SDIO Timing Specifications

SDIO is the main host interface for WLAN, and supports a maximum clock rate of 52MHz. The CC335x device also supports shared SDIO interface for both BLE and WLAN.

7 Detailed Description

The CC335x offers Wi-Fi 6 (802.11ax) and BLE 5.4 (CC3351 devices) in a single-chip solution while maintaining compatibility with Wi-Fi 4 (802.11 a/b/g/n) and Wi-Fi 5 (802.11ac). These devices are ideal for cost-sensitive embedded applications with a Linux or RTOS host running TCP/IP. CC335x brings the efficiency of Wi-Fi 6 to embedded device applications for the Internet of Things (IoT) with a small PCB footprint and a highly optimized bill of materials. The device features an integrated 2.4GHz and 5GHz PA for a complete wireless solution with up to +20.5dBm output power, operating temperature of -40°C to $+105^{\circ}\text{C}$, and application throughput up to 50Mbps. The CC335x devices include BSD-3 clause software distributed in integrated ROM. License terms are provided in the product software manifest available in the [CC33XX-Software](#) downloadable product.

7.1 WLAN Features

The device supports the following WLAN features:

- 2.4GHz and 5GHz, 20MHz, single spatial stream
- MAC, baseband, and RF transceiver with support for IEEE 802.11 a/b/g/n/ax
- OFDMA, trigger frame, MU-MIMO (downlink), basic service set coloring, and target wake time (TWT) for improved efficiency
- Hardware-based encryption and decryption supporting WPA2 and WPA3
- Multirole support (for example, concurrent STA and AP) to connect with Wi-Fi devices on different RF channels (Wi-Fi networks)
- Optional antenna diversity or selection
- 3-wire or 1-wire PTA for external coexistence with additional 2.4GHz radios (for example, Thread or Zigbee)
- Excellent interoperability
- Support for 4-bit SDIO or SPI host interfaces

7.2 Bluetooth Low Energy Features

The device supports the following Bluetooth low energy features:

- Bluetooth Low Energy 5.4
- LE coded PHYs (long range), LE 2M PHY (high speed), and advertising extension
- Host controller interface (HCI) transport with option for UART or shared SDIO

8 Applications, Implementation, and Layout

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

Figure 8-1 shows the reference schematic for the CC335x using an optimized bill of materials.

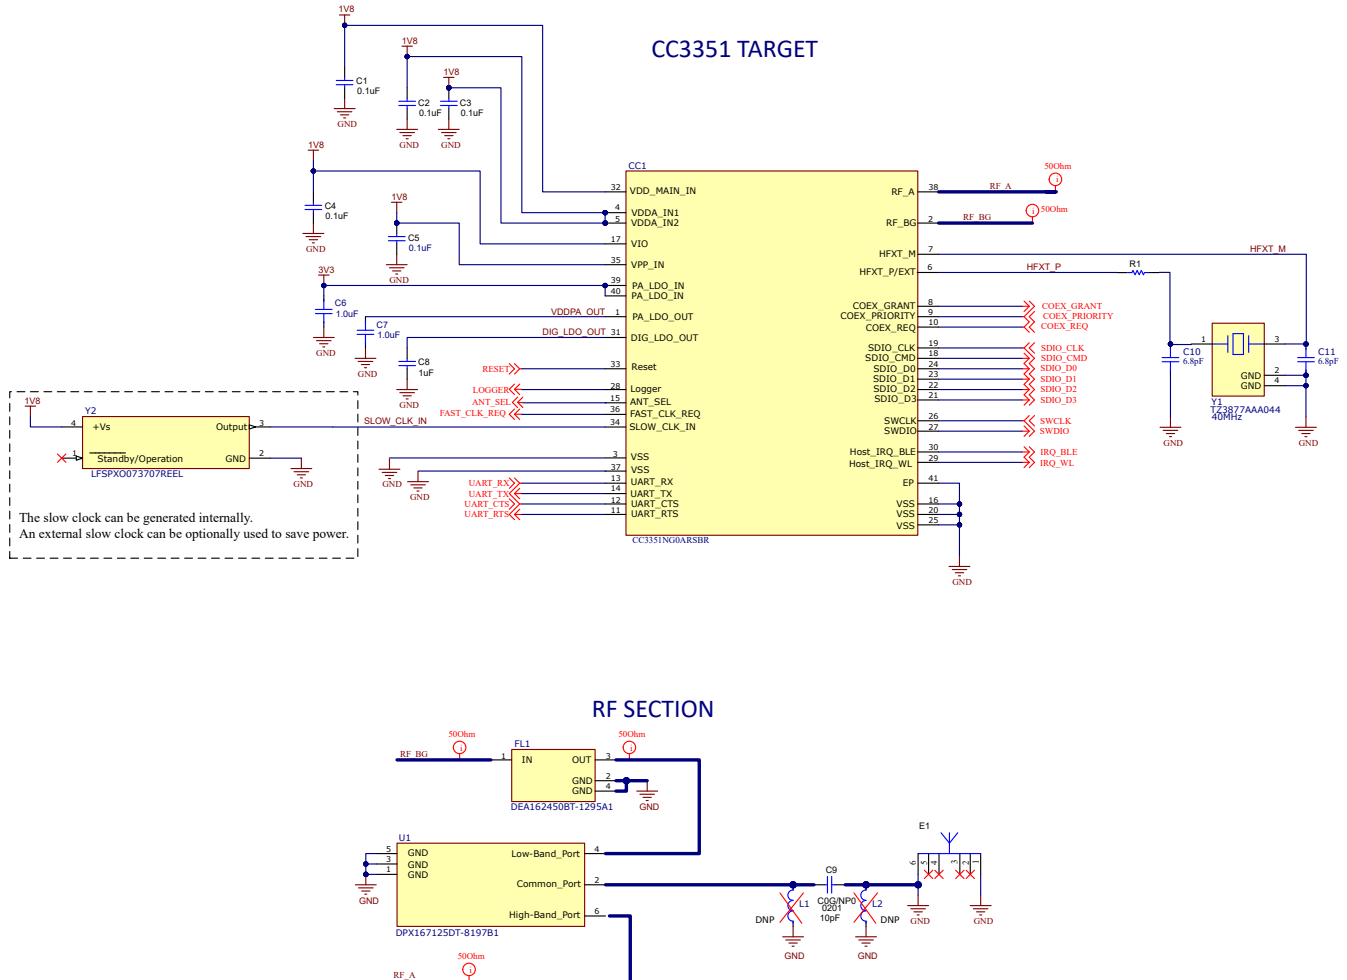

Figure 8-1. CC335x Reference Schematic

1. The slow clock can be generated internally. An external slow clock can be optionally used to save power.
2. For more information on antenna selection and matching, see the [CC33xx Hardware Integration](#).

9 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop systems are listed below.

9.1 Third-Party Products Disclaimer

TI'S PUBLICATION OF INFORMATION REGARDING THIRD-PARTY PRODUCTS OR SERVICES DOES NOT CONSTITUTE AN ENDORSEMENT REGARDING THE SUITABILITY OF SUCH PRODUCTS OR SERVICES OR A WARRANTY, REPRESENTATION OR ENDORSEMENT OF SUCH PRODUCTS OR SERVICES, EITHER ALONE OR IN COMBINATION WITH ANY TI PRODUCT OR SERVICE.

9.2 Device Nomenclature Boilerplate

Device development evolutionary flow:

- X** Experimental device that is not necessarily representative of the final device's electrical specifications and may not use production assembly flow.
- P** Prototype device that is not necessarily the final silicon die and may not necessarily meet final electrical specifications.
- null** Production version of the silicon die that is fully qualified.

Support tool development evolutionary flow:

- TMDX** Development-support product that has not yet completed Texas Instruments internal qualification testing.
- TMDS** Fully-qualified development-support product.

X and P devices and TMDX development-support tools are shipped against the following disclaimer:

Device development evolutionary flow:

- TMX** Experimental device that is not necessarily representative of the final device's electrical specifications and may not use production assembly flow.
- TMP** Prototype device that is not necessarily the final silicon die and may not necessarily meet final electrical specifications.
- TMS** Production version of the silicon die that is fully qualified.

Support tool development evolutionary flow:

- TMDX** Development-support product that has not yet completed Texas Instruments internal qualification testing.
- TMDS** Fully-qualified development-support product.

TMX and TMP devices and TMDX development-support tools are shipped against the following disclaimer:

"Developmental product is intended for internal evaluation purposes."

Production devices and TMDS development-support tools have been characterized fully, and the quality and reliability of the device have been demonstrated fully. TI's standard warranty applies.

Predictions show that prototype devices (X or P) have a greater failure rate than the standard production devices. Texas Instruments recommends that these devices not be used in any production system because their expected end-use failure rate still is undefined. Only qualified production devices are to be used.

9.3 Tools and Software

Design Kits and Evaluation Modules

CC335x Reference Design Files	CC335x reference design CAD source files. TI recommends using this design as a reference when creating the layout to achieve the RF performance listed in this data sheet.
CC3351 BoosterPack plug-in module	The CC3351 BoosterPack™ plug-in module (BP-CC3351) is a test and development board that can be easily connected to TI LaunchPad™ development kits or processor boards; thus, enabling rapid software development.
CC3351 M.2 card plug-in module	The CC3351 M.2 card plug-in module (M2-CC3351) is a test and development board that can be easily connected to TI processor boards or other processor boards with an M.2 Key E interface support; thus, enabling rapid software development.

Software

SimpleLink Wi-Fi Toolbox	SimpleLink Wi-Fi Toolbox is a collection of tools to help development and testing of the CC33xx. The Wi-Fi toolbox package provides all the capabilities required to debug and monitor WLAN/Bluetooth® Low Energy firmware with a host, perform RF validation tests, run a pretest for regulatory certification testing, and debug hardware and software platform integration issues.
CC33xx device drivers	The CC33xx devices are single-chip Wi-Fi 6 and Bluetooth Low Energy 5.4 companion devices designed for both Linux and RTOS-based systems. CC33XX-SOFTWARE is a collection of software development sources aimed to facilitate quick setup, out-of-box experience, and accelerate development in Linux or RTOS environments. These devices include BSD-3 Clause software distributed in integrated ROM. License terms are provided in the product software manifest available in the CC33XX-Software downloadable product.

Application Reports

CC33xx Production Line Guide	Texas Instruments™ provides many resources to assist users in quickly examining the functionality and performance of TI devices. This document provides the necessary information to guide the user in production line testing for CC33xx. The device's functions can be checked using tools and software provided by Texas Instruments. Performance testing is more involved as external equipment is required for a thorough examination.
SimpleLink CC33xx Security Features	This document describes the CC33xx security-related features, which are made available to vendors through an ecosystem that incorporates simple and concise APIs, tools, and documentation.

User's Guides

CC33xx WLAN Features User's Guide	This document provides information about CC33xx family of devices and Wi-Fi® features, as well as TI proprietary enhancements. The document does not provide the complete application programming interface (API) set, but a high-level overview of the features.
CC33xx Hardware Integration	This document describes how to integrate the CC33xx into any system and the hardware requirements for this device. Layout and schematic considerations are listed here as well,

which TI highly recommends following to achieve the device performance listed in this data sheet.

9.7 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
