

CDx4HC251, CDx4HCT251 High-Speed CMOS Logic 8-Input Multiplexer, Three-State

1 Features

- Selects one of eight binary data inputs
- Three-state output capability
- True and complement outputs
- Typical (data to output) propagation delay of 14 ns at $V_{CC} = 5\text{ V}$, $C_L = 15\text{ pF}$, $T_A = 25\text{ }^\circ\text{C}$
- Fanout (over temperature range)
 - Standard outputs : 10 LSTTL loads
 - Bus driver outputs : 15 LSTTL loads
- Wide operating temperature range : $-55\text{ }^\circ\text{C}$ to $125\text{ }^\circ\text{C}$
- Balanced propagation delay and transition times
- Significant power reduction compared to LSTTL logic ICs
- Alternate source is Philips
- HC types
 - 2 V to 6 V operation
 - High noise immunity : $N_{IL} = 30\%$, $N_{IH} = 30\%$ of V_{CC} at $V_{CC} = 5\text{ V}$
- HCT types
 - 4.5 V to 5.5 V operation
 - Direct LSTTL input logic compatibility, $V_{IL} = 0.8\text{ V}$ (Max), $V_{IH} = 2\text{ V}$ (Min)
 - CMOS input compatibility, $I_I \leq 1\text{ }\mu\text{A}$ at V_{OL} , V_{OH}

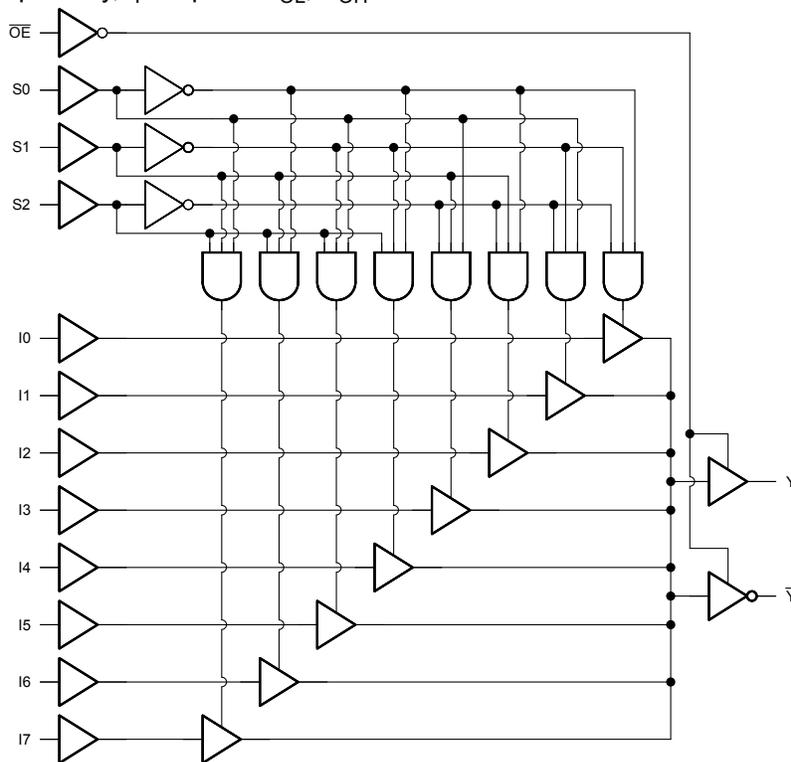

2 Description

The 'HC251 and 'HCT251 are 8-channel digital multiplexers with three-state outputs, fabricated with high-speed silicongate CMOS technology. Together with the low power consumption of standard CMOS integrated circuits, they possess the ability to drive 10 LSTTL loads. The three-state feature makes them ideally suited for interfacing with bus lines in a bus-oriented system.

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{CC}	Supply voltage range	-0.5	7	V
I _{IK}	Input diode current ⁽²⁾	V _I < 0.5 V or V _I > V _{CC} + 0.5 V		±20 mA
I _{OK}	Output diode current ⁽²⁾	V _O < -0.5 V or V _O > V _{CC} + 0.5 V		±20 mA
I _O	Drain current, per output	-0.5 V < V _O < V _{CC} + 0.5 V		±25 mA
I _O	Output source or sink current per output pin	V _O > -0.5 V or V _O < V _{CC} + 0.5 V		±25 mA
Continuous current through V _{CC} or GND				±50 mA
T _J	Junction temperature			150 °C
T _{stg}	Storage temperature	-65	150	°C
Lead temperature (Soldering 10s) (SOIC - lead tips only)				300 °C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

5.2 Recommended Operating Conditions⁽¹⁾

		MIN	MAX	UNIT	
V _{CC}	Supply voltage range	HC Types	2	6	V
		HCT Types	4.5	5.5	V
V _I , V _O	DC input or output voltage	0	V _{CC}	V	
t _t	Input rise and fall time	2 V	1000	ns	
		4.5 V	500		
		6 V	400		
T _A	Temperature range	- 55	125	°C	

- (1) All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report *Implications of Slow or Floating CMOS Inputs*, literature number [SCBA004](#).

5.3 Thermal Information

THERMAL METRIC		D (SOIC)	N (PDIP)	UNIT
		16 PINS	16 PINS	
R _{θJA}	Junction-to-ambient thermal resistance ⁽¹⁾	67	73	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC package thermal metrics](#) application report.

5.4 Electrical Characteristics

PARAMETER		TEST CONDITIONS ⁽¹⁾	V _{CC} (V)	25°C			–40°C to 85°C		–55°C to 125°C		UNIT

C_{pd} ^{(3) (4)}	Power dissipation capacitance	5	60 ⁽²⁾				pF
HCT TYPES							
t_{pd}	Select to outputs	4.5	18 ⁽¹⁾	42	53	63	ns
t_{pd}	Data to outputs	4.5	12 ⁽¹⁾	35	44	53	ns
t_{pd}	Enable to high Z and enable from high Z	4.5	12 ⁽¹⁾	30	38	45	ns
t_t	Output transition times	4.5		15	19	22	ns
C_i	Input capacitance			10	10	10	pF
C_{pd} ^{(3) (4)}	Power dissipation capacitance	5	60 ⁽²⁾				pF

(1) Typical value tested at 5V, $C_L = 15\text{pF}$.

(2) Typical value tested at 5V.

(3) C_{PD} is used to determine the dynamic power consumption, per channel.

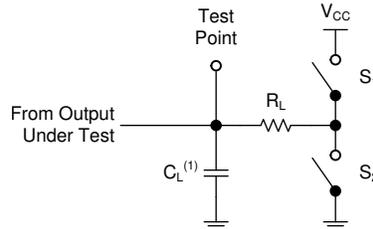

(4) $P_D = V_{CC}^2 f_i (C_{PD} + C_L)$ where f_i = input frequency, C_L = output load capacitance, V_{CC} = supply voltage.

6 Parameter Measurement Information

Phase relationships between waveforms were chosen arbitrarily. All input pulses are supplied by generators having the following characteristics: $PRR \leq 1 \text{ MHz}$, $Z_O = 50 \Omega$, $t_t < 6 \text{ ns}$.

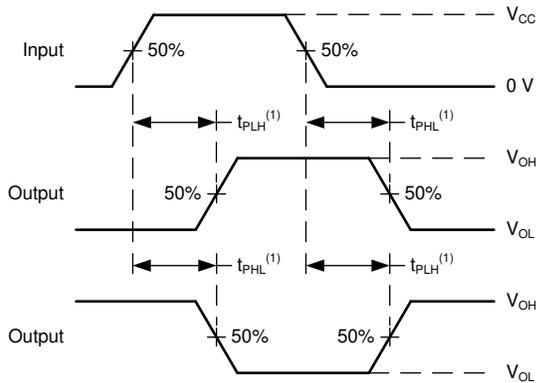

For clock inputs, f_{max} is measured when the input duty cycle is 50%.

The outputs are measured one at a time with one input transition per measurement.

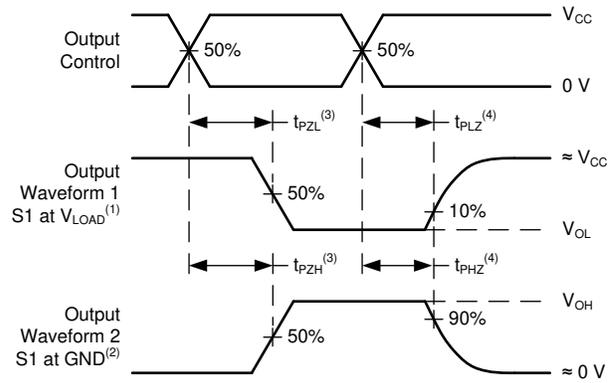

(1) C_L includes probe and test-fixture capacitance.

7 Detailed Description

7.1 Overview

The 'HC251 and 'HCT251 are 8-channel digital multiplexers with three-state outputs, fabricated with high-speed silicongate CMOS technology. Together with the low power consumption of standard CMOS integrated circuits, they possess the ability to drive 10 LSTTL loads. The three-state feature makes them ideally suited for interfacing with bus lines in a bus-oriented system.

This multiplexer features both true (Y) and complement (\bar{Y}) outputs as well as an output enable (\overline{OE}) input. The \overline{OE} must be at a low logic level to enable this device. When the \overline{OE} input is high, both outputs are in the high-impedance state. When enabled, address information on the data select inputs determines which data input is routed to the Y and \bar{Y} outputs. The 'HCT251 logic family is speed, function, and pin-compatible with the standard 'LS251.

7.2 Functional Block Diagram

7.3 Device Functional Modes

Table 7-1. Truth Table⁽¹⁾

INPUTS				OUTPUT	
SELECT			OUTPUT CONTROL \overline{OE}	Y	\overline{Y}
S2	S1	S0			
X	X	X	H	Z	Z
L	L	L	L	I ₀	\overline{I}_0
L	L	H	L	I ₁	\overline{I}_1
L	H	L	L	I ₂	\overline{I}_2
L	H	H	L	I ₃	\overline{I}_3
H	L	L	L	I ₄	\overline{I}_4
H	L	H	L	I ₅	\overline{I}_5
H	H	L	L	I ₆	\overline{I}_6
H	H	H	L	I ₇	\overline{I}_7

- (1) H = High voltage level.
 L = Low voltage level.
 X = Dont care.
 Z = High impedance (Off).
 I₀, I₁... I₇ = The level of the respective input.

8 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the *Recommended Operating Conditions*. Each V_{CC} terminal should have a good bypass capacitor to prevent power disturbance. A 0.1- μF capacitor is recommended for this device. It is acceptable to parallel multiple bypass caps to reject different frequencies of noise. The 0.1- μF and 1- μF capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

9 Layout

9.1 Layout Guidelines

When using multiple-input and multiple-channel logic devices inputs must not ever be left floating. In many cases, functions or parts of functions of digital logic devices are unused; for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such unused input pins must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. All unused inputs of digital logic devices must be connected to a logic high or logic low voltage, as defined by the input voltage specifications, to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally, the inputs are tied to GND or V_{CC} , whichever makes more sense for the logic function or is more convenient.

10 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

10.1 Documentation Support

10.1.1 Related Documentation

10.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

10.3 Support Resources

TI E2E™ [support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

10.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

10.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

10.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) **Status:** For more details on status, see our [product life cycle](#).

- (2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.
- (3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.
- (4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
- (5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.
- (6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
