

DS90LV027AQ Automotive LVDS Dual Differential Driver

Check for Samples: DS90LV027AQ

FEATURES

- AECQ-100 Grade 1
- >600 Mbps (300MHz) Switching Rates
- 0.3 ns Typical Differential Skew
- 0.7 ns Maximum Differential Skew
- 3.3V Power Supply Design
- Low Power Dissipation (46 mW @ 3.3V Static)
- Flow-Through Design Simplifies PCB Layout
- **Power Off Protection (Outputs in High** Impedance)
- Conforms to TIA/EIA-644 Standard
- 8-Lead SOIC Package Saves Space

DESCRIPTION

The DS90LV027AQ is a dual LVDS driver device optimized for high data rate and low power applications. The device is designed to support data rates in excess of 600Mbps (300MHz) utilizing Low Voltage Differential Signaling (LVDS) technology. The DS90LV027AQ is a current mode driver allowing power dissipation to remain low even at high frequency. In addition, the short circuit fault current is also minimized.

The device is in a 8-lead SOIC package. The DS90LV027AQ has a flow-through design for easy PCB layout. The differential driver outputs provides low EMI with its typical low output swing of 360 mV. It is perfect for high speed transfer of clock and data. The DS90LV027AQ can be paired with its companion dual line receiver, the DS90LV028AQ, or with any of TI's LVDS receivers, to provide a high-speed point-topoint LVDS interface.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

- All typicals are given for: V_{CC} = +3.3V and T_A = +25°C. These parameters are ensured by design. The limits are based on statistical analysis of the device over PVT (process, voltage,
- C_L includes probe and fixture capacitance.
- Generator waveform for all tests unless otherwise specified: f = 1 MHz, $Z_0 = 50\Omega$, $t_r \le 1$ ns, $t_f \le 1$ ns (10%-90%).
- t_{SKD1}, |t_{PHLD} t_{PLHD}|, is the magnitude difference in differential propagation delay time between the positive going edge and the negative going edge of the same channel.
- t_{SKD2} is the Differential Channel to Channel Skew of any event on the same device.
- tiskog, Differential Part to Part Skew, is defined as the difference between the minimum and maximum specified differential propagation delays. This specification applies to devices at the same V_{CC} and within 5°C of each other within the operating temperature range.
- t_{SKD4}, part to part skew, is the differential channel to channel skew of any event between devices. This specification applies to devices over recommended operating temperature and voltage ranges, and across process distribution. t_{SKD4} is defined as |Max - Min| differential propagation delay.
- f_{MAX} generator input conditions: $t_r = t_f < 1$ ns (0% to 100%), 50% duty cycle, 0V to 3V. Output criteria: duty cycle = 45%/55%, $V_{OD} > 0$ 250mV, all channels switching.

⁽¹⁾ Status: For more details on status, see our product life cycle.

- (3) RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.
- (4) Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
- (5) MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.
- (6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
