DS91M124 125 MHz 1:4 M-LVDS Repeater with LVCMOS Input

Check for Samples: DS91M124

FEATURES

- **DC - 125 MHz / 250 Mbps Low Jitter, Low Skew, Low Power Operation**
- **Independent Driver Enable Pins**
- **Conforms to TIA/EIA-899 M-LVDS Standard**
- **Controlled Transition Times Minimize Reflections**
- **8 kV ESD on M-LVDS I/O Pins Protects Adjoining Components**
- **Flow-Through Pinout Simplifies PCB Layout**
- **Industrial Operating Temperature Range (−40°C to +85°C)**
- **Available in a Space Saving SOIC-16 Package**

APPLICATIONS

- **Multidrop / Multipoint Clock and Data Distribution**
- **High-Speed, Low Power, Short-Reach Alternative to TIA/EIA-485/422**
- **Clock Distribution in AdvancedTCA (ATCA) and MicroTCA (µTCA) Backplanes**

DESCRIPTION

The DS91M124 is a 1:4 M-LVDS repeater for driving and distributing clock or data signals to up to four multipoint networks.

M-LVDS (Multipoint LVDS) is a new family of bus interface devices based on LVDS technology specifically designed for multipoint and multidrop cable and backplane applications. It differs from standard LVDS in providing increased drive current to handle double terminations that are required in multi-point applications. Controlled transition times minimize reflections that are common in multipoint configurations due to unterminated stubs.

A single DS91M124 channel is a 1:4 repeater that accepts LVTTL/LVCMOS signals at the driver inputs and converts them to differential M-LVDS signal levels. It features independent driver enable pins for each driver output.

The DS91M124 has a flow-through pinout for easy PCB layout. It provides a new alternative for high speed multipoint interface applications. It is packaged in a space saving SOIC-16 package.

Pin Descriptions

Number	Name	I/O, Type	Description
1, 2, 3, 8	DE	I, LVCMOS	Driver enable pin: When a DE pin is low, the corresponding driver output is disabled. When a DE pin is high, the corresponding driver output is enabled. There is a 300 kΩ pulldown resistor on each DE pin.
6	DI	I, LVCMOS	Driver input pin.
5	GND	Power	Ground pin.
10, 11, 14, 15	A	O, M-LVDS	Non-inverting driver output pins.
9, 12, 13, 16	B	O, M-LVDS	Inverting driver output pins.
4	V_{DD}	Power	Power supply pin, +3.3V ± 0.3V
7	N/C	N/A	NO CONNECT pin.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings (1)(2)

Power Supply Voltage	−0.3V to +4V
LVCMOS Input Voltage	−0.3V to (V_{DD} + 0.3V)
M-LVDS Output Voltage	−1.9V to +5.5V

(1) "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur, including inoperability and degradation of device reliability and/or performance. Functional operation of the device and/or non-degradation at the Absolute Maximum Ratings or other conditions beyond those indicated in the Recommended Operating Conditions is not implied. The Recommended Operating Conditions indicate conditions at which the device is functional and the device should not be operated beyond such conditions.
(2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.

(1) The Electrical Characteristics tables list ensured specifications under the listed Recommended Operating Conditions except as otherwise modified or specified by the Electrical Characteristics Conditions and/or Notes. Typical specifications are estimations only and are not ensured.
(2) Current into device pins is defined as positive. Current out of device pins is defined as negative. All voltages are referenced to ground except V_{OD} and ΔV_{OD}.
(3) Typical values represent most likely parametric norms for V_{DD} = +3.3V and T_A = +25°C, and at the Recommended Operation Conditions at the time of product characterization and are not ensured.
(4) C_L includes fixture capacitance and C_D includes probe capacitance.
(5) Specification is ensured by characterization and is not tested in production.
(6) Output short circuit current (I_{OS}) is specified as magnitude only, minus sign indicates direction only.

(3) C_L includes fixture capacitance and C_D includes probe capacitance.
(4) Specification is ensured by characterization and is not tested in production.
(5) t_{SKD1}, $|t_{PLHD} - t_{PHLD}|$, Pulse Skew, is the magnitude difference in differential propagation delay time between the positive going edge and the negative going edge of the same channel.
(6) t_{SKD2}, Channel-to-Channel Skew, is the difference in propagation delay (t_{PLHD} or t_{PHLD}) among all output channels.
(7) t_{SKD3}, Part-to-Part Skew, is defined as the difference between the minimum and maximum differential propagation delays. This specification applies to devices at the same V_{DD} and within 5°C of each other within the operating temperature range.
(8) t_{SKD4}, Part-to-Part Skew, is the differential channel-to-channel skew of any event between devices. This specification applies to devices over recommended operating temperature and voltage ranges, and across process distribution. t_{SKD4} is defined as |Max − Min| differential propagation delay.

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
