• Changed from Advance Information to Production Data	1

5 Pin Configuration and Functions

Pin Functions

PIN		TYPE	DESCRIPTION
NAME	NO.		
GND	3	Ground	Ground. Connect to ground
GND	8		
IO1	1	I/O	ESD protected channel. Connect to the line being protected.
IO2	2		
IO3	4		
IO4	5		
NC	6	NC	Not connected internally; Can be connected to line being protected for optional flow-through routing. Can also be left floating or grounded
NC	7		
NC	9		
NC	10		

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
Electrical Fast Transient	IEC 61000-4-4 Peak Current at 25°C		80	A
Peak Pulse	IEC 61000-4-5 Surge (t_p 8/20 μ s) Peak Power at 25°C		50	W
	IEC 61000-4-5 Surge (t_p 8/20 μ s) Peak Current at 25°C		5.5	A
T_A	Operating free-air temperature	-40	125	°C
T_{stg}	Storage temperature	-65	155	°C

- (1) Stresses beyond those listed under *Absolute Maximum Rating* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Condition*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings -JEDEC Specifications

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	±2500	V
	Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	±1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 ESD Ratings - IEC Specifications

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	IEC 61000-4-2 Contact Discharge, all pins	±30000	V
	IEC 61000-4-2 Air Discharge, all pins	±30000	

6.4 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V_{IN}	Input voltage	-3.6		3.6	V
T_A	Operating Free Air Temperature	-40		125	°C

6.5 Thermal Information

THERMAL METRIC ⁽¹⁾		ESD204	UNIT
		DQA (USON)	
		10 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	262.1	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	184.6	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	138.2	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	41.8	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	137.8	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.6 Electrical Characteristics

At $T_A = 25^\circ\text{C}$ unless otherwise noted

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{RWM}	Reverse stand-off voltage	$I_{IO} < 10\text{ nA}$, across operating temperature range	-3.6		3.6	V
V_{BRF}	Positive Breakdown Voltage, Each IO Pin to GND ⁽¹⁾	$I_{IO} = 1\text{ mA}$	5		7.9	V
V_{BRR}	Negative Breakdown Voltage, Each IO Pin to GND ⁽¹⁾	$I_{IO} = -1\text{ mA}$,	-7.9		-5	V
V_{HOLD}	Positive Holding Voltage, Each IO pin to GND ⁽²⁾	$I_{IO} = 1\text{ mA}$		6.2		V
$V_{HOLD-NEG}$	Negative Holding Voltage, Each IO pin to GND ⁽²⁾	$I_{IO} = -1\text{ mA}$		-6.2		V
V_{CLAMP}	Clamping voltage	Surge $I_{PP} = 5.5\text{ A}$, Each IO pin to GND, GND to Each IO pin, $t_p=8/20\text{ }\mu\text{s}$		8.5		V
		TLP $I_{PP} = 5\text{ A}$, Each IO pin to GND, GND to Each IO pin, $t_p=10/100\text{ ns}$		8.2		V
		TLP $I_{PP} = 16\text{ A}$, Each IO pin to GND, GND to Each IO pin, $t_p=10/100\text{ ns}$		11.5		V
R_{DYN}	Dynamic resistance	Each IO Pin to GND, TLP $t_p=10/100\text{ ns}$		0.3		Ω
		GND to Each IO Pin, TLP $t_p=10/100\text{ ns}$		0.3		
C_{LINE}	Line capacitance, any IO to GND	$V_{IO} = 0\text{ V}$, $V_{p-p} = 30\text{ mV}$, $f = 1\text{ MHz}$		0.55	0.65	pF
ΔC_{LINE}	Variation of line capacitance	$C_{LINE1} - C_{LINE2}$, $V_{IO} = 0\text{ V}$, $V_{p-p} = 30\text{ mV}$, $f = 1\text{ MHz}$		0.02	0.07	pF
C_{CROSS}	Line-to-line capacitance	$V_{IO} = 0\text{ V}$, $V_{rms} = 30\text{ mV}$, $f = 1\text{ MHz}$		0.25	0.35	pF

(1) V_{BRF} and V_{BRR} are defined as the voltage obtained at 1 mA when sweeping the voltage up, before the device latches into the snapback state

(2) V_{HOLD} is defined as the voltage when 1 mA is applied, after the device has successfully latched into the snapback state.

7 Detailed Description

7.1 Overview

The ESD204 is a bidirectional ESD Protection Diode with ultra-low capacitance. This device can dissipate ESD strikes up to 30kV (Contact/Air) level specified by the IEC 61000-4-2 International Standard. Additionally, ESD204 dissipates 5.5 A of surge current (8/20 μ s waveform) per IEC 61000-4-5 standard. The ultra-low capacitance makes this device capable of supporting any super high-speed signal pins.

7.2 Functional Block Diagram

7.3 Feature Description

ESD204 provides ESD protection up to ± 30 -kV contact and ± 30 -kV air gap per IEC61000-4-2 standard. During an ESD event, ESD diode connected to the IO pin turns on and diverts the ESD current to ground. Additionally, ESD204 also provides protection against IEC 61000-4-5 surge currents up to 5.5 A (8/20 μ s waveform) and up to 80 A per IEC 61000-4-4 electrical fast transient (EFT) standard. Please see the [Application Note](#) on IEC61000-4-x standard based tests. ESD204 provides a very low clamping voltage of 11.5 V at 16 A 100 ns TLP current and 8.5 V at 5.5 A surge current (8/20 μ s waveform).

The capacitance between each I/O pin to ground is 0.55 pF (typical) and 0.65 pF (maximum). This device supports data rates up to 6 Gbps. The DC breakdown voltage of each I/O pin is a minimum of ± 5 V. This ensures that sensitive equipment is protected from surges above the reverse standoff voltage of ± 3.6 V. The I/O pins feature an ultra-low leakage current of 10 nA (maximum) with a bias of ± 3.6 V.

7.4 Device Functional Modes

The ESD204 is a passive integrated circuit that triggers when voltages are above V_{BRF} or below V_{BRR} . During ESD events, voltages as high as ± 30 kV (contact/air) can be directed to ground via the internal diode network. When the voltages on the protected line fall below the trigger levels of ESD204 (usually within 10s of nano-seconds) the device reverts to passive.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The ESD204 is a diode type TVS array which is used to provide a path to ground for dissipating ESD events on high-speed signal lines between an interface connector and a system. As the current from ESD passes through the TVS, only a small voltage drop is present across the diode. This is the voltage presented to the protected IC. The low R_{DYN} of the triggered TVS holds this voltage, V_{CLAMP} , to a safe level for the protected IC.

8.2 Typical Application

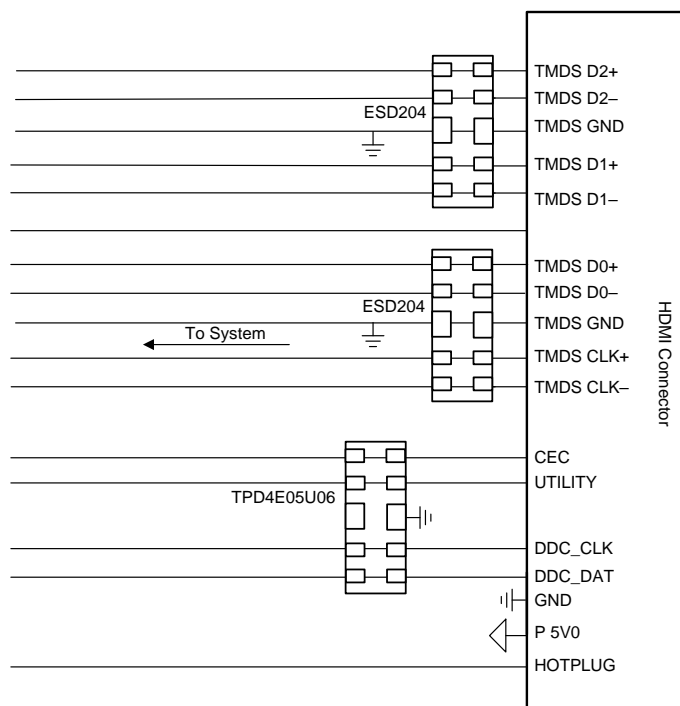

Figure 11. ESD204 Protecting the HDMI Interface

8.2.1 Design Requirements

In this design example, two ESD204 devices and one TPD4E05U06 device are used to protect an HDMI 2.0 interface. For HDMI 2.0 application design parameters listed in [Table 1](#) are known.

Table 1. Design Parameters

DESIGN PARAMETER	VALUE
Signal range on high speed differential data lines	0 to 3.6 V
Operating frequency of high speed data lines	3 GHz (First Harmonic)
Signal range on control lines (CEC, UTILITY, DDC_CLK and DDC_DAT)	0 to 5 V

8.2.2 Detailed Design Procedure

8.2.2.1 Signal Range

ESD204 supports signal ranges between -3.6 V and 3.6 V , which supports the high-speed lines on the HDMI 2.0 application. The TPD4E05U06 supports signal ranges between 0 V and 5.5 V , which supports the HDMI control lines.

8.2.2.2 Operating Frequency

The ESD204 has a 0.55 pF (typical) capacitance, which supports the HDMI 2.0 rate of 6 Gbps . The TPD4E05U06 has a typical capacitance of 0.5 pF , which easily support the control lines. The ESD204 has 4 identical protection channels for the differential HDMI high-speed signal lines. The symmetrical pin out of the device with a ground pin between the two differential signal pins makes it suitable for this application.

11 Device and Documentation Support

11.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

11.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

11.3 Trademarks

E2E is a trademark of Texas Instruments.

All other trademarks are the property of their respective owners.

11.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

11.5 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package Pins	Package qty Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
ESD204DQAR	Active	Production	USON (DQA) 10	3000 LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 125	(CE5, CEG) CEY

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
