

INA143 INA2143

For most current data sheet and other product information, visit www.burr-brown.com

High-Speed, Precision, $G = 10$ or $G = 0.1$ DIFFERENCE AMPLIFIERS

FEATURES

- DESIGNED FOR LOW COST
- $G = 10V/V$ or $G = 0.1V/V$
- SINGLE, DUAL VERSIONS
- LOW OFFSET VOLTAGE:
 $\pm 250\mu V$ max, $\pm 3\mu V/^\circ C$ max
- LOW GAIN ERROR: 0.01%
- HIGH SLEW RATE: $5V/\mu s$
- FAST SETTLING TIME: $9\mu s$ to 0.01%
- LOW QUIESCENT CURRENT: $950\mu A$
- WIDE SUPPLY RANGE: $\pm 2.25V$ to $\pm 18V$
- SO-8 and SO-14 PACKAGES

DESCRIPTION

The INA143 and INA2143 are high slew rate, gain of $10V/V$ or $0.1V/V$ difference amplifiers consisting of a precision op amp with a precision resistor network. The on-chip resistors are laser trimmed for accurate gain and high common-mode rejection. Excellent TCR tracking of the resistor maintains gain accuracy and common-mode rejection over temperature. They operate over a wide supply range, $\pm 2.25V$ to $\pm 18V$ ($+4.5V$ to $+36V$ single supply), and input common-mode voltage range extends beyond the positive and negative supply rails.

APPLICATIONS

- DIFFERENTIAL INPUT AMPLIFIER BUILDING BLOCK
- DIFF IN/DIFF OUT AMPLIFIER
- GAIN = -10 INVERTING AMPLIFIER
- GAIN = $+10$ NON-INVERTING AMPLIFIER
- GAIN = $+11$ NON-INVERTING AMPLIFIER
- SYNCHRONOUS DEMODULATOR
- CURRENT/DIFFERENTIAL LINE RECEIVER
- VOLTAGE-CONTROLLED CURRENT SOURCE
- BATTERY POWERED SYSTEMS
- LOW COST AUTOMOTIVE

The differential amplifier is the foundation of many commonly used circuits. The low cost INA143 and INA2143 provide this precision circuit function without using an expensive precision network.

The single version, INA143, package is the SO-8 surface mount. The dual version, INA2143, package is the SO-14 surface mount. Both are specified for operation over the extended industrial temperature range, $-40^\circ C$ to $+85^\circ C$. Operation is from $-55^\circ C$ to $+125^\circ C$.

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

Supply Voltage, V_+ to V_-	36V
Input Signal ($G = 10$), Voltage	$1.1 \cdot V_S$
Current	0.5mA
Input Signal ($G = 0.1$), Voltage	$11 \cdot V_S$
Current	0.5mA
Output Short-Circuit (to ground) ⁽²⁾	Continuous
Operating Temperature	-55°C to $+125^\circ\text{C}$
Storage Temperature	-55°C to $+125^\circ\text{C}$
Junction Temperature	$+150^\circ\text{C}$
Lead Temperature (soldering, 10s)	$+300^\circ\text{C}$

NOTES: (1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. (2) One channel per package.

ELECTROSTATIC DISCHARGE SENSITIVITY

This integrated circuit can be damaged by ESD. Burr-Brown recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

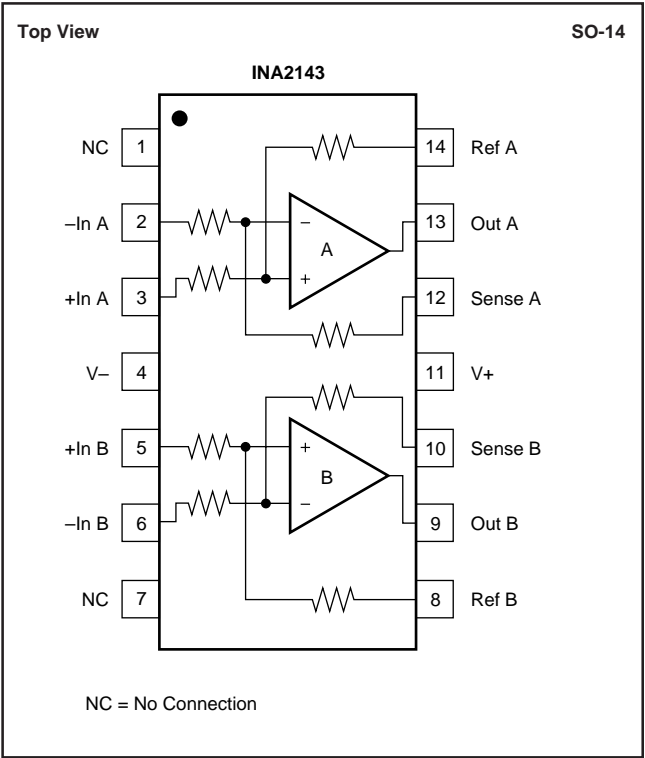

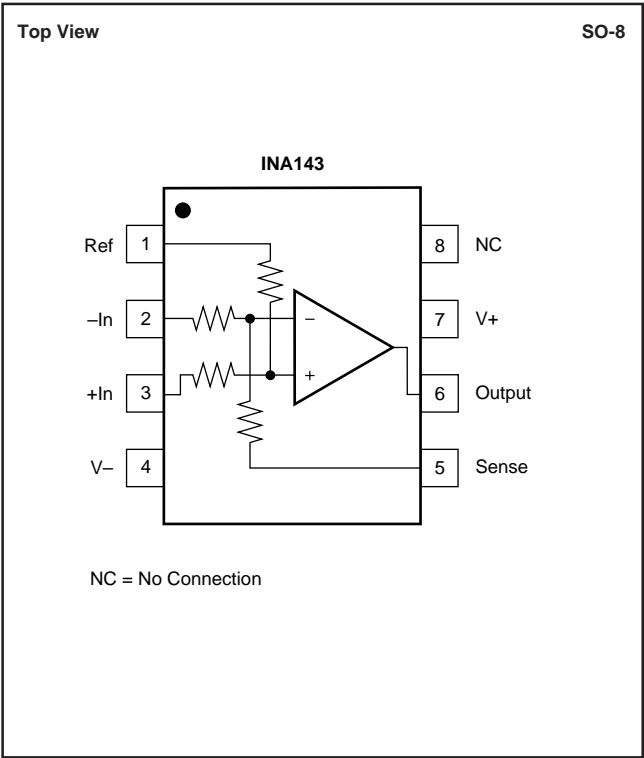

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

NOTES: (1) For detailed drawing and dimension table, please see end of data sheet, or Appendix C of Burr-Brown IC Data Book. (2) Models with a slash (/) are available only in Tape and Reel in the quantities indicated (e.g., /2K5 indicates 2500 devices per reel). Ordering 2500 pieces of "INA143UA/2K5" will get a single 2500-piece Tape and Reel. For detailed Tape and Reel mechanical information, refer to Appendix B of Burr-Brown IC Data Book.

PIN CONFIGURATIONS

TYPICAL PERFORMANCE CURVES

At $T_A = +25^\circ\text{C}$, $V_S = \pm 15\text{V}$, $G = 10$, $R_L = 10\text{k}\Omega$ connected to ground, and reference pin connected to ground, unless otherwise noted.

TYPICAL PERFORMANCE CURVES (CONT)

At $T_A = +25^\circ\text{C}$, $V_S = \pm 15\text{V}$, $G = 10$, $R_L = 10\text{k}\Omega$ connected to ground, and reference pin connected to ground, unless otherwise noted.

TYPICAL PERFORMANCE CURVES (CONT)

At $T_A = +25^\circ\text{C}$, $V_S = \pm 15\text{V}$, $G = 10$, $R_L = 10\text{k}\Omega$ connected to ground, and reference pin connected to ground, unless otherwise noted.

TYPICAL PERFORMANCE CURVES (CONT)

At $T_A = +25^\circ\text{C}$, $V_S = \pm 15\text{V}$, $G = 10$, $R_L = 10\text{k}\Omega$ connected to ground, and reference pin connected to ground, unless otherwise noted.

SMALL-SIGNAL STEP RESPONSE

LARGE-SIGNAL STEP RESPONSE

APPLICATIONS INFORMATION

The INA143 and INA2143 are high-speed difference amplifiers suitable for a wide range of general-purpose applications. Figure 1 shows the basic $G = 10$ configuration. The input and feedback resistors can be reversed to achieve $G = 0.1$, as shown in Figure 2. For applications requiring $G = 1$, the INA133 and INA2133 are recommended.

Decoupling capacitors are strongly recommended for applications with noisy or high impedance power supplies. The capacitors should be placed close to the device pins as shown in Figure 1. All circuitry is completely independent in the dual version assuring lowest crosstalk and normal behavior when one amplifier is overdriven or short-circuited.

As shown in Figure 1, the differential input signal is connected to pins 2 and 3. The source impedances connected to the inputs must be nearly equal to assure good common-mode rejection. A 5Ω mismatch in source impedance will degrade the common-mode rejection of a typical device to approximately 86dB (RTI). If the source has a known impedance mismatch, an additional resistor in series with the opposite input can be used to preserve good common-mode rejection.

The INA143's internal resistors are accurately ratio trimmed to match. That is, R_1/R_2 and R_3/R_4 are trimmed to equal 0.1. However, the absolute values may not be equal ($R_1 + R_2$ may be slightly different than $R_3 + R_4$). Thus, large series resistors on the input (greater than 100Ω), even if well matched, will degrade common-mode rejection.

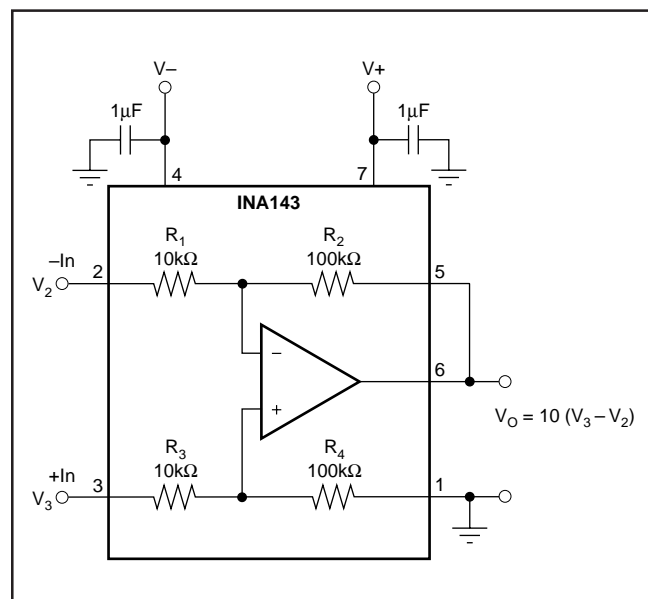

FIGURE 1. $G = 10$ Basic Power Supply and Signal Connections.

OPERATING VOLTAGE

The INA143 and INA2143 operate from single (+4.5V to +36V) or dual ($\pm 2.25V$ to $\pm 18V$) supplies with excellent performance. Specifications are production tested with $\pm 5V$ and $\pm 15V$ supplies. Most behavior remains unchanged

throughout the full operating voltage range. Parameters which vary significantly with operating voltage are shown in the Typical Performance Curves.

OFFSET VOLTAGE TRIM

The INA143 and INA2143 are laser trimmed for low offset voltage and drift. Most applications require no external offset adjustment. Figure 3 shows an optional circuit for trimming the output offset voltage. The output is referred to the output reference terminal (pin 1), which is normally grounded. A voltage applied to the Ref terminal will be summed with the output signal. This can be used to null offset voltage as shown in Figure 3. The source impedance of a signal applied to the Ref terminal should be less than 10Ω to maintain good common-mode rejection.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
