

## ISO724x High-Speed, Quad-Channel Digital Isolators

### 1 Features

- 25 and 150Mbps Signaling Rate Options
  - Low Channel-to-Channel Output Skew; 1ns Maximum
  - Low Pulse-Width Distortion (PWD); 2ns Maximum
  - Low Jitter Content; 1ns Typ at 150Mbps
- Selectable Default Output ( ISO7240CF )
- > 25-Year Life at Rated Working Voltage (see [Isolation Lifetime Projection](#))
- 4-kV ESD Protection
- Operates With 3.3V or 5V Supplies
- High Electromagnetic Immunity (see [ISO72x Digital Isolator Magnetic-Field Immunity](#))
- –40°C to +125°C Operating Temperature Range
- [Safety-Related Certifications:](#)
  - DIN EN IEC 60747-17 (VDE 0884-17)
  - UL 1577 component recognition program
  - IEC 61010-1, IEC 62368-1 certifications

### 2 Applications

- [Factory Automation](#)
  - Modbus
  - Profibus™
  - DeviceNet™ Data Buses
- [Computer Peripheral Interface](#)
- [Servo Control Interface](#)
- [Data Acquisition](#)

### 3 Description

The ISO7240x, ISO7241x, and ISO7242x devices are quad-channel digital isolators with multiple channel configurations and output-enable functions. These devices have logic-input and logic-output buffers separated by Texas Instrument's silicon-dioxide ( $\text{SiO}_2$ ) isolation barrier. Used in conjunction with isolated power supplies, these devices help block high voltage, isolate grounds, and prevent noise currents from entering the local ground and interfering with or damaging sensitive circuitry.

The ISO7240x family of devices has all four channels in the same direction. The ISO7241x family of devices has three channels in the same direction and one channel in the opposition direction. The ISO7242x family of devices has two channels in each direction.

The devices with the C suffix (C option) have TTL input thresholds and a noise-filter at the input that prevents transient pulses from being passed to the output of the device. The devices with the M suffix (M option) have CMOS  $V_{CC}/2$  input thresholds and do not have the input noise filter or the additional propagation delay.

The ISO7240CF device has an input disable function on pin 7, and a selectable high or low failsafe-output function with the CTRL pin (pin 10). The failsafe output is a logic high when a logic high is placed on the CTRL pin or the pin is left unconnected. If a logic low signal is applied to the CTRL pin, the failsafe output becomes a logic-low output state. The input disable function of the ISO7240CF device prevents data from being passed across the isolation barrier to the output. When the inputs are disabled or  $V_{CC1}$  is powered down, the outputs are set by the CTRL pin.

These devices can be powered from 3.3V or 5V supplies on either side, in any combination. The signal input pins are 5V tolerant regardless of the voltage supply level that is used.

These devices are characterized for operation over the ambient temperature range of –40°C to +125°C.

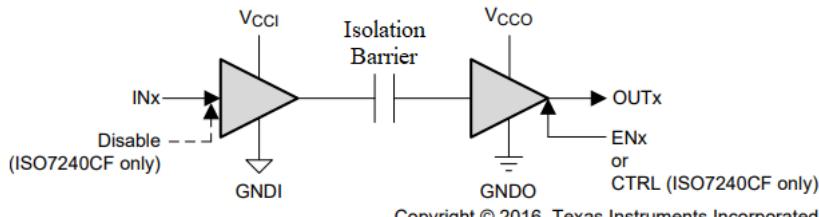

An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. PRODUCTION DATA.

### Package Information

PART NUMBER	PACKAGE <sup>(1)</sup>	BODY SIZE (NOM)	PACKAGE SIZE <sup>(2)</sup>
ISO7240CF			
ISO7240C			
ISO7240M			
ISO7241C	DW (SOIC, 16)	10.30mm × 7.50mm	10.30mm × 10.30mm
ISO7241M			
ISO7242C			
ISO7242M			

- (1) For all available packages, see the orderable addendum at the end of the data sheet.  
 (2) The package size (length × width) is a nominal value and includes pins, where applicable.

## 4 Pin Configurations and Functions

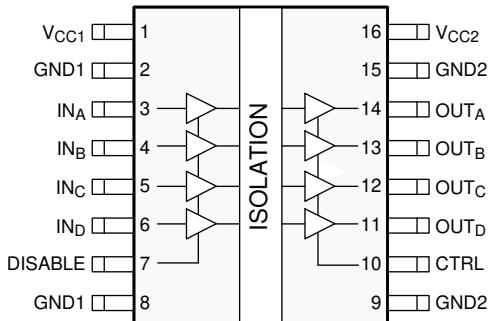

Figure 4-1. ISO7240CF DW Package 16-Pin SOIC Top View

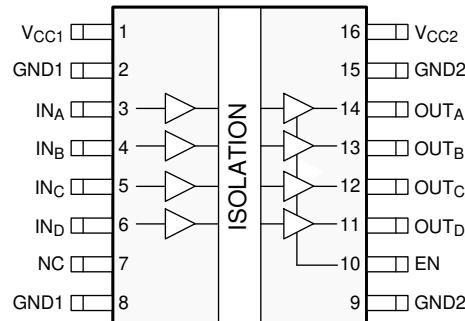

Figure 4-2. ISO7240C DW Package 16-Pin SOIC Top View

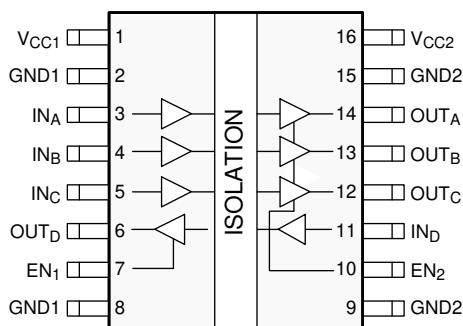

Figure 4-3. ISO7241C DW Package 16-Pin SOIC Top View

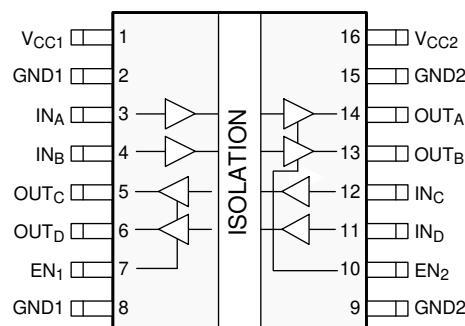

Figure 4-4. ISO7242C DW Package 16-Pin SOIC Top View

Table 4-1. Pin Functions

NAME	PIN				Type <sup>(1)</sup>	DESCRIPTION <sup>3</sup>
	ISO7240CF	ISO7240C	ISO7241C	ISO7242C		
CTRL	10	—	—	—	I	Failsafe output control. Output state is determined by CTRL pin when DISABLE is high or V <sub>CC1</sub> is powered down. Output is high when CTRL is high or open and low when CTRL is low.
DISABLE	7	—	—	—	I	Input disable. All input pins are disabled when DISABLE is high and enabled when DISABLE is low or open.
EN	—	10	—	—	I	Output enable. All output pins are enabled when EN is high or open and disabled when EN is low.
EN <sub>1</sub>	—	—	7	7	I	Output enable 1. Output pins on side 1 are enabled when EN <sub>1</sub> is high or open and disabled when EN <sub>1</sub> is low.
EN <sub>2</sub>	—	—	10	10	I	Output enable 2. Output pins on side-2 are enabled when EN <sub>2</sub> is high or open and disabled when EN <sub>2</sub> is low.
GND1	2, 8	2, 8	2, 8	2, 8	—	Ground connection for V <sub>CC1</sub>
GND2	9, 15	9, 15	9, 15	9, 15	—	Ground connection for V <sub>CC2</sub>
IN <sub>A</sub>	3	3	3	3	I	Input, channel A
IN <sub>B</sub>	4	4	4	4	I	Input, channel B
IN <sub>C</sub>	5	5	5	12	I	Input, channel C
IN <sub>D</sub>	6	6	11	11	I	Input, channel D
NC	—	7	—	—	—	No Connect pins are floating with no internal connection
OUT <sub>A</sub>	14	14	14	14	O	Output, channel A
OUT <sub>B</sub>	13	13	13	13	O	Output, channel B
OUT <sub>C</sub>	12	12	12	5	O	Output, channel C
OUT <sub>D</sub>	11	11	6	6	O	Output, channel D
V <sub>CC1</sub>	1	1	1	1	—	Power supply, V <sub>CC1</sub>
V <sub>CC2</sub>	16	16	16	16	—	Power supply, V <sub>CC2</sub>

(1) I = Input; O = Output

## 5 Specifications

### 5.1 Absolute Maximum Ratings

See <sup>(1)</sup>

		MIN	MAX	UNIT
V <sub>CC</sub>	Supply voltage <sup>(2)</sup> , V <sub>CC1</sub> , V <sub>CC2</sub>	-0.5	6	V
V <sub>I</sub>	Voltage at IN, OUT, EN, DISABLE, CTRL	-0.5	V <sub>CC</sub> + 0.5 <sup>(3)</sup>	V
I <sub>O</sub>	Output current	-15	15	mA
T <sub>J</sub>	Maximum junction temperature		170	°C
T <sub>stg</sub>	Storage temperature	-65	150	°C

- (1) Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If used outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
- (2) All voltage values except differential I/O bus voltages are with respect to the local ground terminal (GND1 or GND2) and are peak voltage values.
- (3) Maximum voltage must not exceed 6 V.

### 5.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±4000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 5.3 Recommended Operating Conditions

		MIN	NOM	MAX	UNIT
V <sub>CC</sub>	Supply voltage <sup>(2)</sup> , V <sub>CC1</sub> , V <sub>CC2</sub>	3.15		5.5	V
I <sub>OH</sub>	High-level output current		-4		mA
I <sub>OL</sub>	Low-level output current			4	mA
t <sub>ui</sub>	Input pulse width	ISO724xC	40		ns
		ISO724xM	6.67	5	
1/t <sub>ui</sub>	Signaling rate	ISO724xC	0	30 <sup>(1)</sup>	Mbps
		ISO724xM	0	200 <sup>(1)</sup>	
V <sub>IH</sub>	High-level input voltage (IN)	ISO724xM	0.7 × V <sub>CC</sub>	V <sub>CC</sub>	V
V <sub>IL</sub>	Low-level input voltage (IN)		0	0.3 × V <sub>CC</sub>	V
V <sub>IH</sub>	High-level input voltage (IN, DISABLE, CTRL, EN on all devices)	ISO724xC	2	5.5	V
V <sub>IL</sub>	Low-level input voltage (IN, DISABLE, CTRL, EN on all devices)		0	0.8	V
T <sub>J</sub>	Junction temperature			150	°C
H	External magnetic field-strength immunity per IEC 61000-4-8 and IEC 61000-4-9 certification			1000	A/m

- (1) Typical value at room temperature and well-regulated power supply.
- (2) For the 5-V operation, V<sub>CC1</sub> or V<sub>CC2</sub> is specified from 4.5 V to 5.5 V.  
For the 3.3-V operation, V<sub>CC1</sub> or V<sub>CC2</sub> is specified from 3.15 V to 3.6 V.

## 5.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>			ISO724xx	UNIT
			DW (SOIC)	
			16 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	Low-K board	168	°C/W
		High-K board	68.6	°C/W
$R_{\theta JC(\text{top})}$	Junction-to-case (top) thermal resistance		33.9	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance		33.5	°C/W
$\Psi_{JT}$	Junction-to-top characterization parameter		14.8	°C/W
$\Psi_{JB}$	Junction-to-board characterization parameter		32.9	°C/W
$R_{\theta JC(\text{bot})}$	Junction-to-case (bottom) thermal resistance		n/a	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application note.

## 5.5 Power Ratings

$V_{CC1} = V_{CC2} = 5.5$  V,  $T_J = 150$ C,  $C_L = 15$  pF, Input a 50% duty cycle 25-Mbps square wave (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$P_D$	Maximum power dissipation			220	mW

## 5.6 Insulation Specifications

PARAMETER	TEST CONDITIONS	VALUE	UNIT
<b>GENERAL</b>			
CLR	External clearance <sup>(1)</sup>	Shortest terminal-to-terminal distance through air	8 mm
CPG	External creepage <sup>(1)</sup>	Shortest terminal-to-terminal distance across the package surface	8 mm
DTI	Distance through the insulation	Minimum internal gap (internal clearance)	0.008 mm
CTI	Comparative tracking index	DIN EN 60112 (VDE 0884-17); IEC 60112	≥ 400 V
	Material group		II
	Overvoltage Category	Rated mains voltage ≤ 150 V <sub>RMS</sub>	I-IV
		Rated mains voltage ≤ 300 V <sub>RMS</sub>	I-III
<b>DIN EN IEC 60747-17 (VDE 0884-17):<sup>(2)</sup></b>			
$V_{IORM}$	Maximum repetitive peak isolation voltage	AC voltage (bipolar)	560 V <sub>PK</sub>
$V_{IOTM}$	Maximum transient isolation voltage	$V_{TEST} = V_{IOTM}$ , $t = 60$ s (qualification); $V_{TEST} = 1.2 \times V_{IOTM}$ , $t = 1$ s (100% production)	4000 V <sub>PK</sub>
$q_{pd}$	Apparent charge <sup>(3)</sup>	Method a: After I/O safety test subgroup 2/3. $V_{ini} = V_{IOTM}$ , $t_{ini} = 60$ s; $V_{pd(m)} = 1.2 \times V_{IORM}$ , $t_m = 10$ s,	≤5 pC
		Method a: After environmental tests subgroup 1, $V_{ini} = V_{IOTM}$ , $t_{ini} = 60$ s; $V_{pd(m)} = 1.3 \times V_{IORM}$ , $t_m = 10$ s,	≤5 pC
		Method b1: At routine test (100% production) $V_{ini} = V_{IOTM}$ , $t_{ini} = 1$ s; $V_{pd(m)} = 1.5 \times V_{IORM}$ , $t_m = 1$ s,	≤5 pC
$C_{IO}$	Barrier capacitance, input to output <sup>(4)</sup>	$V_I = 0.4 \sin(2\pi ft)$ , $f = 1$ MHz	2 pF

		$V_{IO} = 500$ V, $100^\circ\text{C} \leq T_A \leq 125^\circ\text{C}$	> $10^{11}$ Ω
		$V_{IO} = 500$ V at $T_S = 150^\circ\text{C}$	> $10^9$ Ω
	Pollution degree		2
	Climatic category		40/125/21
<b>UL 1577</b>			
$V_{ISO}$	Withstand isolation voltage	$V_{TEST} = V_{ISO} = 2500$ V <sub>RMS</sub> , $t = 60$ s (qualification); $V_{TEST} = 1.2 \times V_{ISO} = 3000$ V <sub>RMS</sub> , $t = 1$ s (100% production)	2500 V <sub>RMS</sub>

(1) Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of

the isolator on the printed-circuit board do not reduce this distance. Creepage and clearance on a printed-circuit board become equal in certain cases. Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications.

- (2) This coupler is suitable for *basic electrical insulation* only within the maximum operating ratings. Compliance with the safety ratings shall be ensured by means of suitable protective circuits.
- (3) Apparent charge is electrical discharge caused by a partial discharge (pd).
- (4) All pins on each side of the barrier tied together creating a two-terminal device

## 5.7 Safety-Related Certifications

VDE	CSA	UL
Plan to certify according to DIN EN IEC 60747-17 (VDE 0884-17)	Plan to certify according to IEC 62368-1	Plan to certify according to UL 1577 Component Recognition Program
Certificate planned	Certificate planned	Certificate planned

## 5.8 Safety Limiting Values

Safety limiting<sup>(1)</sup> intends to minimize potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the I/O can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier, potentially leading to secondary system failures.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$I_s$	Safety input, output, or supply current	$R_{8JA} = 168^\circ\text{C}/\text{W}$ , $V_I = 5.5 \text{ V}$ , $T_J = 170^\circ\text{C}$ , $T_A = 25^\circ\text{C}$ , see <a href="#">Figure 5-2</a>			156	mA
		$R_{8JA} = 168^\circ\text{C}/\text{W}$ , $V_I = 3.6 \text{ V}$ , $T_J = 170^\circ\text{C}$ , $T_A = 25^\circ\text{C}$ , see <a href="#">Figure 5-2</a>			239	
$T_s$	Safety temperature				150	°C

- (1) The safety-limiting constraint is the maximum junction temperature specified in the data sheet. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the table is that of a device installed on a high-K test board for leaded surface-mount packages. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

## 5.9 Electrical Characteristics: $V_{CC1}$ and $V_{CC2}$ at 5-V Operation

For the 5-V operation,  $V_{CC1}$  or  $V_{CC2}$  is specified from 4.5 V to 5.5 V. Over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$I_{OFF}$	Sleep mode output current	EN at 0 V, Single channel		0		$\mu A$
$V_{OH}$	High-level output voltage	$I_{OH} = -4 \text{ mA}$ , See <a href="#">Figure 6-1</a>	$V_{CCO} - 0.8$			V
		$I_{OH} = -20 \text{ } \mu\text{A}$ , See <a href="#">Figure 6-1</a>	$V_{CCO} - 0.1$			
$V_{OL}$	Low-level output voltage	$I_{OL} = 4 \text{ mA}$ , See <a href="#">Figure 6-1</a>		0.4		V
		$I_{OL} = 20 \text{ } \mu\text{A}$ , See <a href="#">Figure 6-1</a>		0.1		
$V_{I(HYS)}$	Input voltage hysteresis			150		mV
$I_{IH}$	High-level input current	IN at $V_{CC1}$		10		$\mu A$
$I_{IL}$	Low-level input current	IN at 0 V	-10			
$C_I$	Input capacitance to ground	IN at $V_{CC}$ , $V_I = 0.4 \sin(2\pi ft)$ , f=2MHz		2		pF
CMTI	Common-mode transient immunity	$V_I = V_{CC}$ or 0 V, See <a href="#">Figure 6-5</a>	25	50		kV/ $\mu$ s

## 5.10 Supply Current Characteristics: $V_{CC1}$ and $V_{CC2}$ at 5-V Operation

For the 5-V operation,  $V_{CC1}$  or  $V_{CC2}$  is specified from 4.5 V to 5.5 V. Over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>ISO7240C/M</b>						
$I_{CC1}$	Supply current, side 1	Quiescent, All channels, no load, EN at 3 V, $V_I = V_{CC}$ or 0 V	1	3		mA
		25 Mbps, All channels, no load, EN at 3 V, 12.5-MHz input-clock signal	7	10.5		
$I_{CC2}$	Supply current, side 2	All channels, no load, EN at 3 V	Quiescent, $V_I = V_{CC}$ or 0 V	15	22	mA
			25 Mbps, 12.5-MHz input-clock signal	17	25	
<b>ISO7241C/M</b>						
$I_{CC1}$	Supply current, side 1	All channels, no load, $EN_1$ at 3 V, $EN_2$ at 3 V	Quiescent, $V_I = V_{CC}$ or 0 V	6.5	11	mA
			25 Mbps, 12.5-MHz input-clock signal	12	18	
$I_{CC2}$	Supply current, side 2	All channels, no load, $EN_1$ at 3 V, $EN_2$ at 3 V	Quiescent, $V_I = V_{CC}$ or 0 V	13	20	mA
			25 Mbps, 12.5-MHz input-clock signal	18	28	
<b>ISO7242C/M</b>						
$I_{CC1}$	Supply current, side 1	All channels, no load, $EN_1$ at 3 V, $EN_2$ at 3 V	Quiescent, $V_I = V_{CC}$ or 0 V	10	16	mA
			25 Mbps, 12.5-MHz input-clock signal	15	24	
$I_{CC2}$	Supply current, side 2	All channels, no load, $EN_1$ at 3 V, $EN_2$ at 3 V	Quiescent, $V_I = V_{CC}$ or 0 V	10	16	mA
			25 Mbps, 12.5-MHz input-clock signal	15	24	

## 5.11 Electrical Characteristics: $V_{CC1}$ at 5-V, $V_{CC2}$ at 3.3-V Operation

For the 5-V operation,  $V_{CC1}$  or  $V_{CC2}$  is specified from 4.5 V to 5.5 V. For the 3.3-V operation,  $V_{CC1}$  or  $V_{CC2}$  is specified from 3.15 V to 3.6 V. Over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
$I_{OFF}$	Sleep mode output current	EN at 0 V, Single channel			0		$\mu A$
$V_{OH}$	High-level output voltage	$I_{OH} = -4 \text{ mA}$ , See <a href="#">Figure 6-1</a>		3.3-V side	$V_{CC0} - 0.4$		V
				5-V side	$V_{CC0} - 0.8$		
		$I_{OH} = -20 \mu A$ , See <a href="#">Figure 6-1</a>			$V_{CC0} - 0.1$

## 7 Detailed Description

### 7.1 Overview

The ISO724x family of devices transmit digital data across a silicon dioxide based isolation barrier. The digital input signal (IN) of the device is sampled by a transmitter and at every data edge the transmitter sends a corresponding differential signal across the isolation barrier. When the input signal is static, the refresh logic periodically sends the necessary differential signal from the transmitter. On the other side of the isolation barrier, the receiver converts the differential signal into a single-ended signal which is output on the OUT pin through a buffer. If the receiver does not receive a data or refresh signal, the timeout logic detects the loss of signal or power from the input side and drives the output to the default level.

### 7.2 Functional Block Diagram

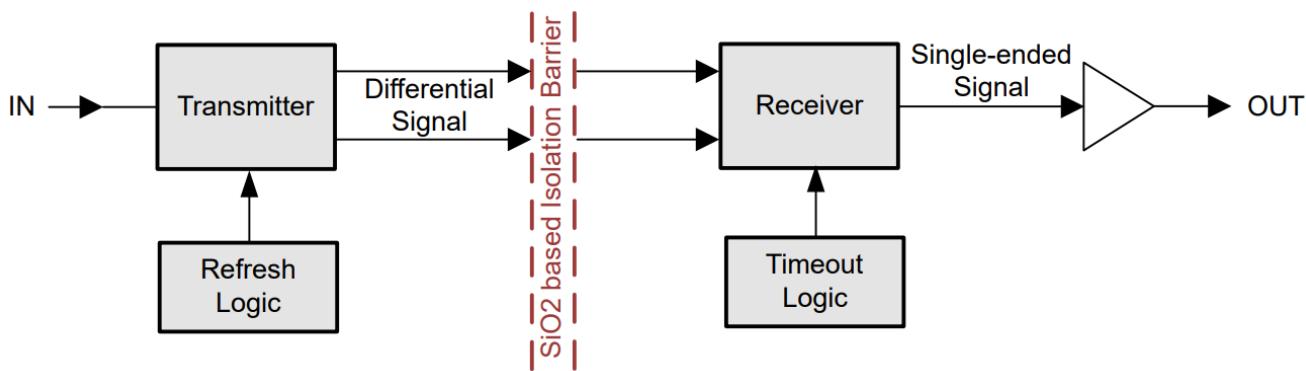

Figure 7-1. Conceptual Block Diagram of a Digital Isolator

## 7.3 Feature Description

The ISO724x-Q1 family of devices is available in multiple channel configurations and default output-state options to enable wide variety of application uses. [Table 7-1](#) lists these device features.

**Table 7-1. Device Features**

PRODUCT <sup>(1)</sup>	SIGNALING RATE	INPUT THRESHOLD	CHANNEL CONFIGURATION
ISO7240CF	25 Mbps	$\approx 1.5$ V (TTL)	4/0
ISO7241C	25 Mbps	$\approx 1.5$ V (TTL)	3/1
ISO7242C	25 Mbps	$\approx 1.5$ V (TTL)	2/2

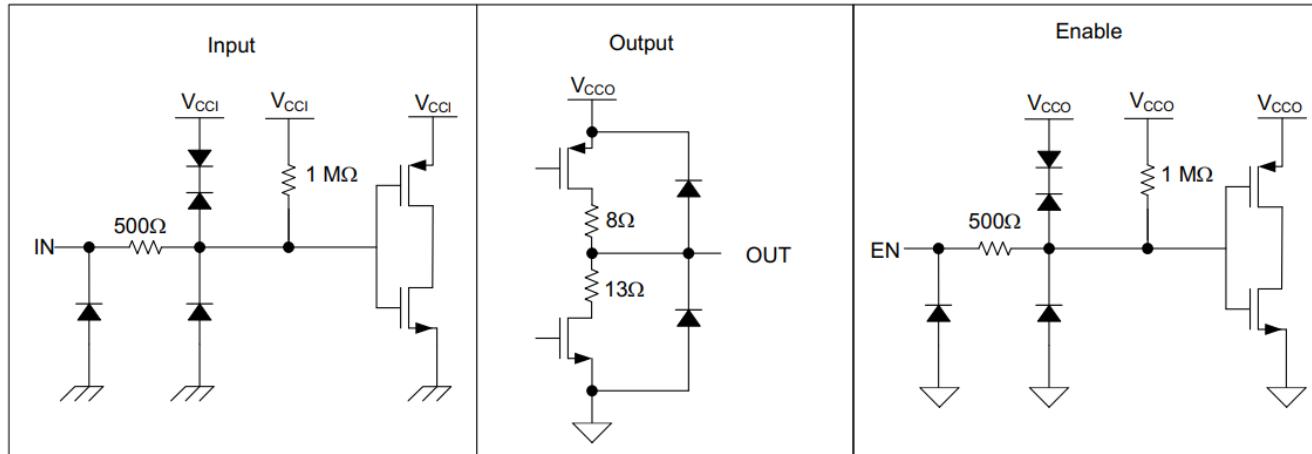

## 7.4 Device Functional Modes

List of ISO7231C-Q1 functional modes.

**Table 7-2. Device Function Table ISO7231C-Q1**

INPUT V <sub>CC</sub>	OUTPUT V <sub>CC</sub>	INPUT (IN)	OUTPUT ENABLE (EN)	OUTPUT (OUT)
PU	PU	H	H or Open	H
		L	H or Open	L
		X	L	Z
		Open	H or Open	H
PD	PU	X	H or Open	H
PD	PU	X	L	Z
X	PD	X	X	Undetermined

## 8 Application and Implementation

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

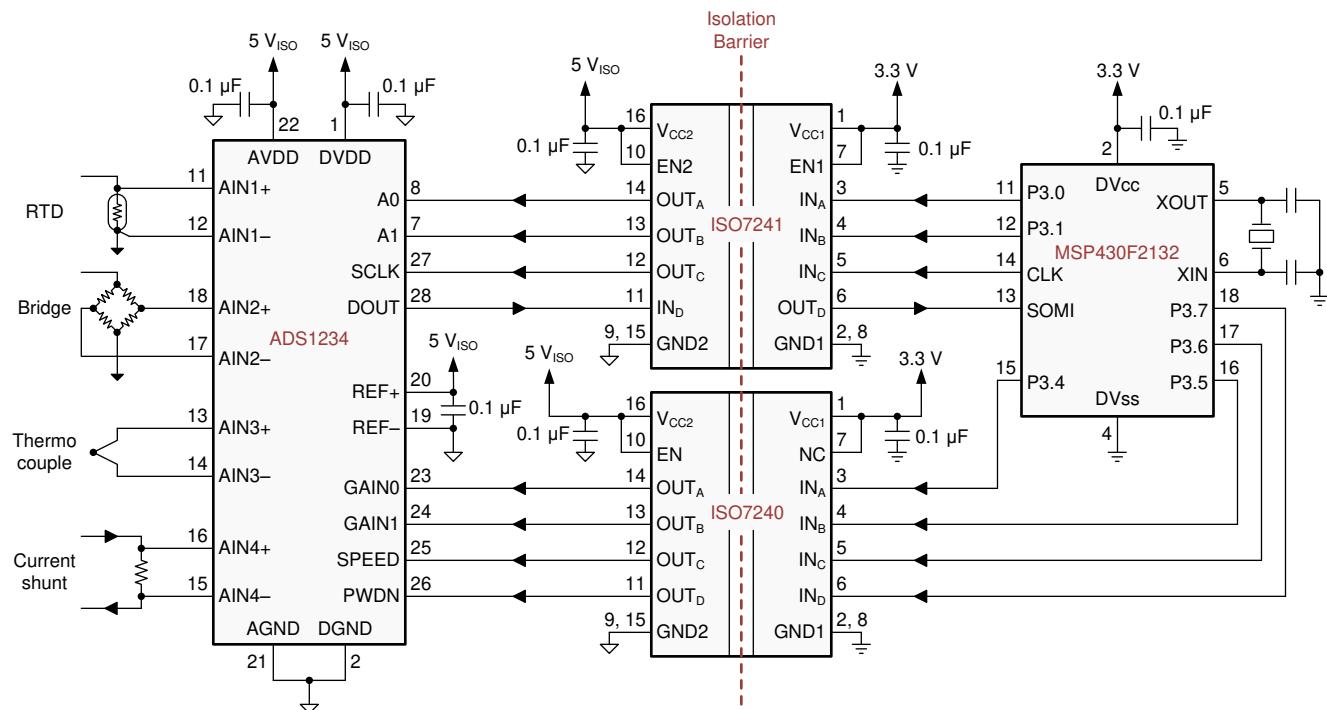

### 8.1 Application Information

The ISO724xx family of devices uses a single-ended TTL or CMOS-logic switching technology. The supply voltage range is from 3.15 V to 5.5 V for both supplies,  $V_{CC1}$  and  $V_{CC2}$ . When designing with digital isolators, keep in mind that because of the single-ended design structure, digital isolators do not conform to any specific interface standard and are only intended for isolating single-ended CMOS or TTL digital signal lines. The isolator is typically placed between the data controller (that is,  $\mu$ C or UART), and a data converter or a line transceiver, regardless of the interface type or standard.

### 8.2 Typical Application

#### 8.2.1 Isolated Data Acquisition System for Process Control

The ISO724xx family of devices can be used with Texas Instruments' precision analog-to-digital converter and mixed signal microcontroller to create an advanced isolated data acquisition system as shown in [Figure 8-1](#).

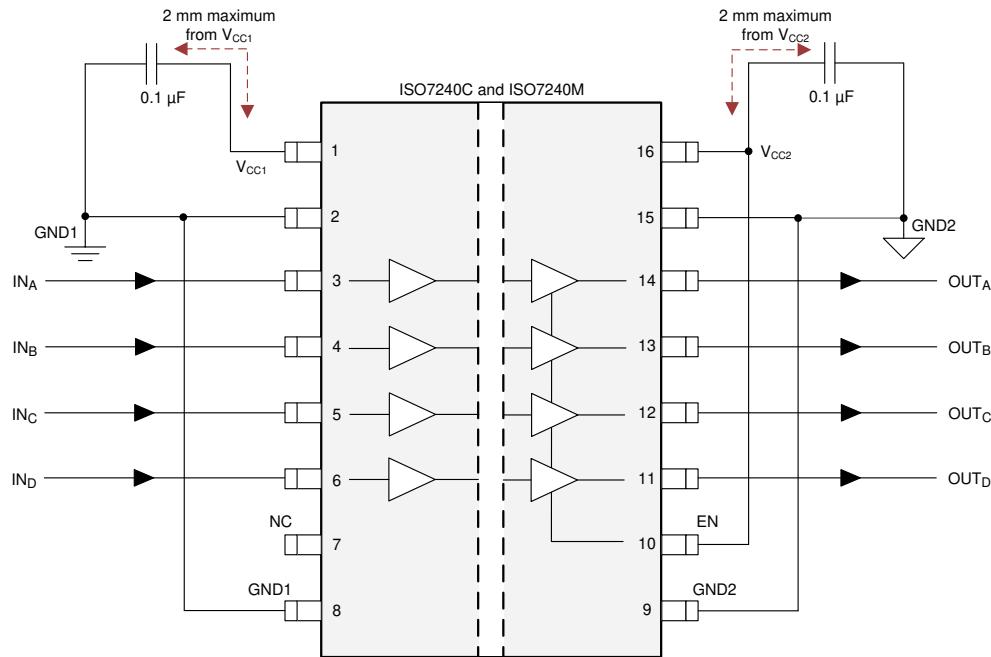

Copyright © 2016, Texas Instruments Incorporated

**Figure 8-1. Isolated Data Acquisition System for Process Control**

#### 8.2.1.1 Design Requirements

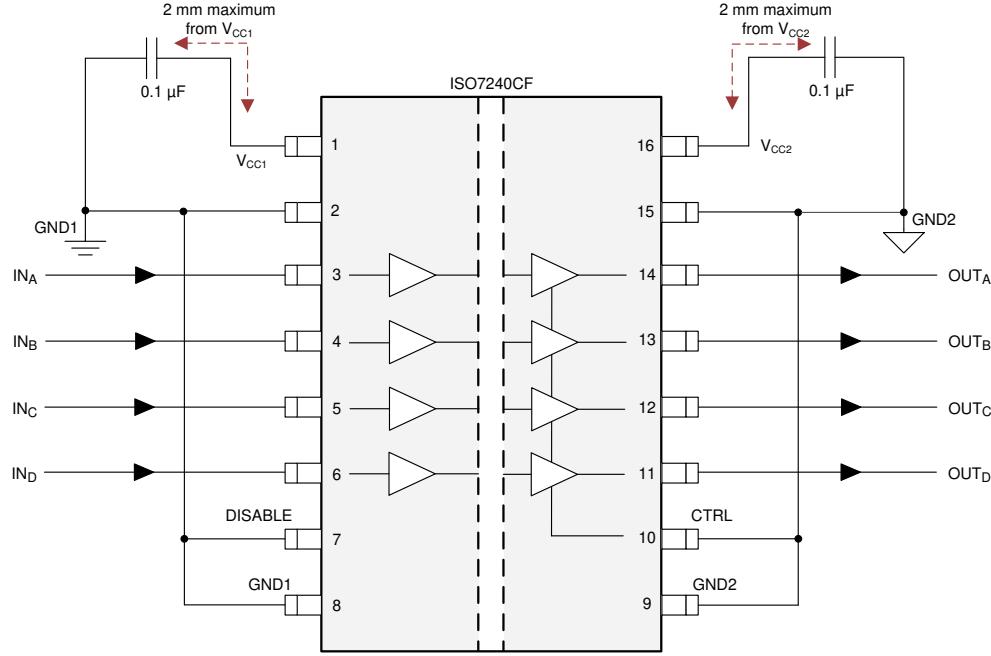

Unlike optocouplers, which require external components to improve performance, provide bias, or limit current, the ISO724x family of devices only require two external bypass capacitors to operate.

See the *Application Curves* in *Section 8.2.1*.

### 8.3 Power Supply Recommendations

To help provide reliable operation at data rates and supply voltages, a 0.1- $\mu$ F bypass capacitor is recommended at input and output supply pins (VCC1 and VCC2). The capacitors must be placed as close to the supply pins as possible. If only a single primary-side power supply is available in an application, isolated power can be generated for the secondary-side with the help of a transformer driver such as Texas Instruments' [SN6501](#) device. For such applications, detailed power supply design and transformer selection recommendations are available in [SN6501 Transformer Driver for Isolated Power Supplies](#).

## 8.4 Layout

### 8.4.1 Layout Guidelines

A minimum of four layers is required to accomplish a low EMI PCB design (see [Figure 8-10](#)). Layer stacking must be in the following order (top-to-bottom): high-speed signal layer, ground plane, power plane and low-frequency signal layer.

- Routing the high-speed traces on the top layer avoids the use of vias (and the introduction of the inductances) and allows for clean interconnects between the isolator and the transmitter and receiver circuits of the data link.
- Placing a solid ground plane next to the high-speed signal layer establishes controlled impedance for transmission line interconnects and provides an excellent low-inductance path for the return current flow.
- Placing the power plane next to the ground plane creates additional high-frequency bypass capacitance of approximately 100 pF/in<sup>2</sup>.
- Routing the slower speed control signals on the bottom layer allows for greater flexibility as these signal links typically have margin to tolerate discontinuities such as vias.

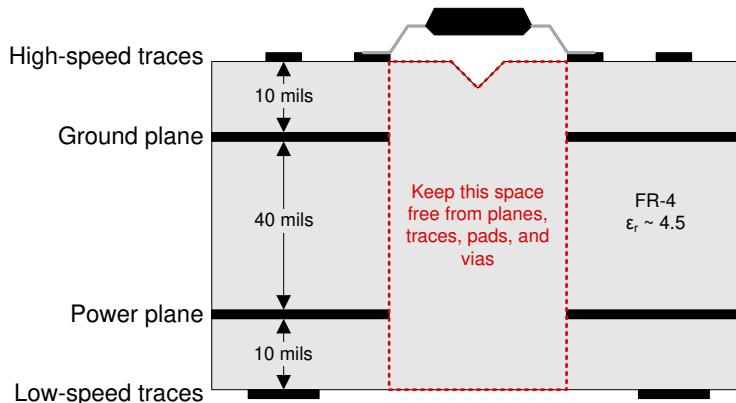

If an additional supply voltage plane or signal layer is needed, add a second power or ground plane system to the stack to keep the planes symmetrical. This makes the stack mechanically stable and prevents warping. Also the power and ground plane of each power system can be placed closer together, thus increasing the high-frequency bypass capacitance significantly.

For detailed layout recommendations, refer to [Digital Isolator Design Guide](#).

#### 8.4.1.1 PCB Material

For digital circuit boards operating at less than 150 Mbps, (or rise and fall times greater than 1 ns), and trace lengths of up to 10 inches, use standard FR-4 UL94V-0 printed circuit board. This PCB is preferred over cheaper alternatives because of lower dielectric losses at high frequencies, less moisture absorption, greater strength and stiffness, and the self-extinguishing flammability-characteristics.

### 8.4.2 Layout Example

**Figure 8-10. Recommended Layer Stack**

## 9 Device and Documentation Support

### 9.1 Documentation Support

#### 9.1.1 Related Documentation

For related documentation, see the following:

- [Digital Isolator Design Guide](#)
- [Isolation Glossary](#)

### 9.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](#). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 9.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 9.4 Trademarks

Profibus™ is a trademark of Profibus.

DeviceNet™ is a trademark of Open DeviceNet Vendors Association.

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 9.5 Electrostatic Discharge Caution

 This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 9.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision U (October 2024) to Revision V (February 2025)	Page
• Updated the numbering format for tables, figures, and cross-references throughout the document.....	1

Changes from Revision T (March 2017) to Revision U (October 2024)	Page
• Updated reference from capacitive isolation to isolation barrier throughout the document.....	1
• Updated VDE V 0884-11 to DIN VDE 0884-17 throughout the document.....	1
• Updated the numbering format for tables, figures, and cross-references throughout the document.....	1
• Updated Thermal Characteristics, Safety Limiting Values, and Thermal Derating Curves to provide more accurate system-level thermal calculations.....	6
• Updated electrical and switching characteristics to match device performance.....	8

---

<b>Changes from Revision S (April 2016) to Revision T (March 2017)</b>	<b>Page</b>
• Added isolation resistance for $100^{\circ}\text{C} \leq T_A \leq 125^{\circ}\text{C}$ in the <i>Insulation Specifications</i> table.....	6
• Deleted the maximum transient overvoltage from VDE in the <i>Safety-Related Certifications</i> table.....	7
• Added the <i>Receiving Notification of Documentation Updates</i> and the <i>Community Resources</i> section.....	28

---

## 11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

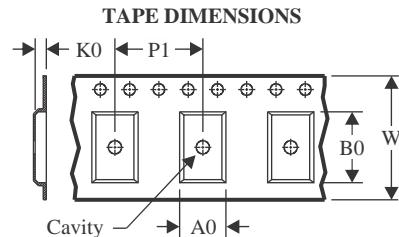

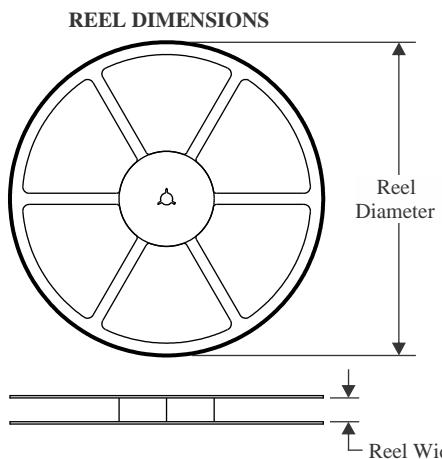

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## NOTES:

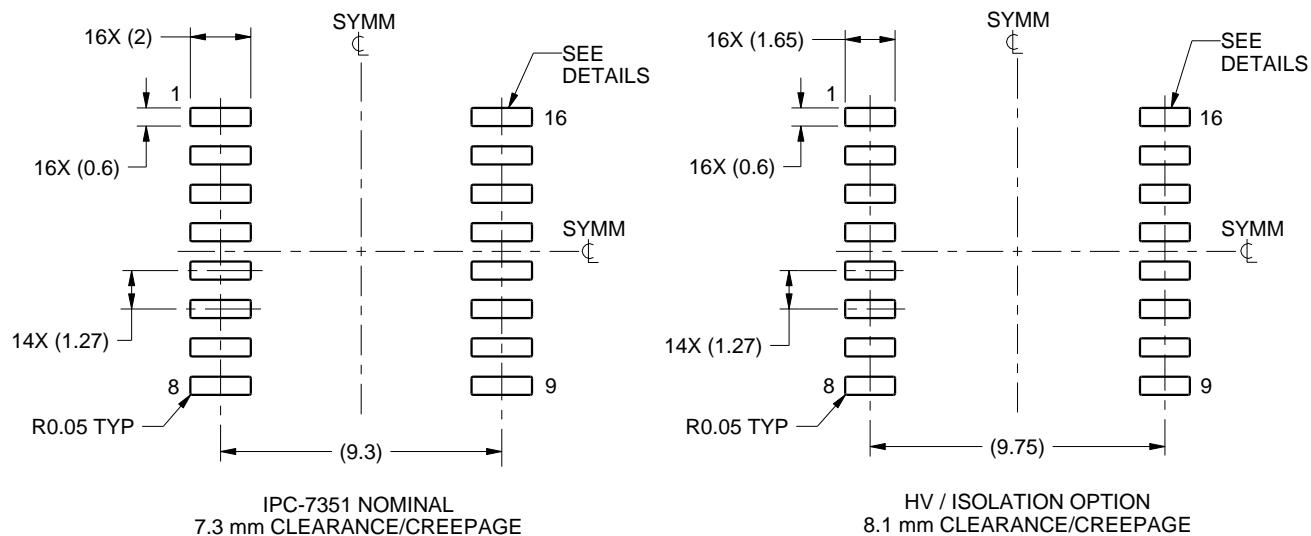

- All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
- This drawing is subject to change without notice.
- This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
- This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm, per side.
- Reference JEDEC registration MS-013.
