

QUADRUPLE OPERATIONAL AMPLIFIER

Check for Samples: [LM124-SP](#), [LM124A-SP](#)

FEATURES

- QML-V Qualified, SMD 5962-7704301VCA, 5962-9950403VCA and 5962-9950403V9B
- Rad-Tolerant: 50 kRad (Si) TID (5962-9950403VCA and 5962-9950403V9B) ⁽¹⁾
 - TID Dose Rate = 0.01 rad/sec (Si)
- Wide Supply Ranges
 - Single Supply: 3 V to 32 V
 - Dual Supplies: ± 1.5 V to ± 16 V
- Low Supply-Current Drain Independent of Supply Voltage: 0.8 mA (Typ)
- Low Input Bias and Offset Parameters
 - Input Offset Voltage: 1 mV Typ
 - Input Offset Current: 2 nA Typ
 - Input Bias Current: 30 nA Typ
- Common-Mode Input Voltage Range Includes Ground, Allowing Direct Sensing Near Ground

(1) Radiation tolerance is a typical value based upon initial device qualification with dose rate = 0.01 rad/sec. Radiation lot acceptance testing is available - contact factory for details.

- Differential Input Voltage Range Equal to Maximum-Rated Supply Voltage: ± 32 V
- Open-Loop Differential Voltage Amplification: 100 V/mV Typ
- Internal Frequency Compensation

**J PACKAGE
(TOP VIEW)**

DESCRIPTION/ORDERING INFORMATION

These devices consist of four independent high-gain frequency-compensated operational amplifiers that are designed specifically to operate from a single supply over a wide range of voltages. Operation from split supplies also is possible if the difference between the two supplies is 3 V to 32 V, and V_{CC} is at least 1.5 V more positive than the input common-mode voltage. The low supply-current drain is independent of the magnitude of the supply voltage.

Applications include transducer amplifiers, dc amplification blocks, and all the conventional operational-amplifier circuits that now can be more easily implemented in single-supply-voltage systems. For example, the LM124 can be operated directly from the standard 5-V supply that is used in digital systems and provides the required interface electronics, without requiring additional ± 15 -V supplies.

Table 1. ORDERING INFORMATION ⁽¹⁾

T_A	V_{IOmax} AT 25°C	MAX V_{CC}	PACKAGE ⁽²⁾	ORDERABLE PART NUMBER		TOP-SIDE MARKING
–55°C to 125°C	5 mV	30 V	J	LM124	5962-7704301VCA	5962-7704301VCA
	3 mV	30 V		LM124A	5962-9950403VCA ⁽³⁾	5962-9950403VCA
	3 mV	30 V	KGD	5962-9950403V9B ⁽³⁾		N/A

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.

(2) Package drawings, thermal data, and symbolization are available at www.ti.com/packaging.

(3) Radiation tolerant

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V _{CC}	Supply voltage ⁽²⁾		±16 or 32	V
V _{ID}	Differential input voltage ⁽³⁾		±32	V
V _I	Input voltage range (either input)	–0.3	32	V
	Duration of output short circuit to ground ⁽⁴⁾		Unlimited	
θ _{JC}	Package thermal impedance, junction to case ^{(5) (6)}		15.05	°C/W
T _J	Operating virtual-junction temperature		150	°C
	Lead temperature 1,6 mm (1/16 in) from case for 60 s		300	°C
T _{stg}	Storage temperature range	–65	150	°C

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential voltages, are with respect to network ground.
- (3) Differential voltages are at IN+ with respect to IN–.
- (4) Short circuits from outputs to V_{CC} can cause excessive heating and eventual destruction.
- (5) Maximum power dissipation is a function of T_J (max), θ_{JC}, and T_C. The maximum allowable power dissipation at any allowable case temperature is P_D = (T_J (max) – T_C)/θ_{JC}. Operating at the absolute maximum T_J of 150°C can affect reliability.
- (6) The package thermal impedance is calculated in accordance with MIL-STD-883.

ELECTRICAL CHARACTERISTICS FOR LM124

at specified free-air temperature, $V_{CC} = 5\text{ V}$ (unless otherwise noted)

PARAMETER			TEST CONDITIONS ⁽¹⁾		T _A ⁽²⁾	MIN	TYP ⁽³⁾	MAX	UNIT
V _{IO}	Input offset voltage	V _{CC} = 5 V to MAX, V _{IC} = V _{ICR} min, V _O = 1.4 V		25°C			3	5	mV

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
