

## MIXED SIGNAL MICROCONTROLLER

### FEATURES

- Low Supply Voltage Range 1.8 V to 3.6 V
- Ultra-Low Power Consumption
  - Active Mode: 220  $\mu$ A at 1 MHz, 2.2 V
  - Standby Mode: 0.5  $\mu$ A
  - Off Mode (RAM Retention): 0.1  $\mu$ A
- Five Power-Saving Modes
- Ultra-Fast Wake-Up From Standby Mode in Less Than 1  $\mu$ s
- 16-Bit RISC Architecture, 62.5-ns Instruction Cycle Time
- Basic Clock Module Configurations:
  - Internal Frequencies up to 16 MHz With Four Calibrated Frequencies to  $\pm 1\%$
  - Internal Very Low-Power Low-Frequency Oscillator
  - 32-kHz Crystal
  - External Digital Clock Source
- 16-Bit Timer\_A With Two Capture/Compare Registers
- On-Chip Comparator for Analog Signal Compare Function or Slope A/D (MSP430F20x1)
- 10-Bit 200-ksps A/D Converter With Internal Reference, Sample-and-Hold, and Autoscan (MSP430F20x2)
- 16-Bit Sigma-Delta A/D Converter With Differential PGA Inputs and Internal Reference (MSP430F20x3)
- Universal Serial Interface (USI) Supporting SPI and I2C (MSP430F20x2 and MSP430F20x3)
- Brownout Detector
- Serial Onboard Programming, No External Programming Voltage Needed, Programmable Code Protection by Security Fuse
- On-Chip Emulation Logic With Spy-Bi-Wire Interface
- Family Members:
  - MSP430F2001
    - 1KB + 256B Flash Memory
    - 128B RAM
  - MSP430F2011
    - 2KB + 256B Flash Memory
    - 128B RAM
  - MSP430F2002
    - 1KB + 256B Flash Memory
    - 128B RAM
  - MSP430F2012
    - 2KB + 256B Flash Memory
    - 128B RAM
  - MSP430F2003
    - 1KB + 256B Flash Memory
    - 128B RAM
  - MSP430F2013
    - 2KB + 256B Flash Memory
    - 128B RAM
- Available in 14-Pin Plastic Small-Outline Thin Package (TSSOP), 14-Pin Plastic Dual Inline Package (PDIP), and 16-Pin QFN
- For Complete Module Descriptions, See the *MSP430x2xx Family User's Guide* ([SLAU144](#))

### DESCRIPTION

The Texas Instruments MSP430 family of ultra-low-power microcontrollers consist of several devices featuring different sets of peripherals targeted for various applications. The architecture, combined with five low-power modes is optimized to achieve extended battery life in portable measurement applications. The device features a powerful 16-bit RISC CPU, 16-bit registers, and constant generators that contribute to maximum code efficiency. The digitally controlled oscillator (DCO) allows wake-up from low-power modes to active mode in less than 1  $\mu$ s.

The MSP430F20xx series is an ultra-low-power mixed signal microcontroller with a built-in 16-bit timer and ten I/O pins. In addition, the MSP430F20x1 has a versatile analog comparator. The MSP430F20x2 and MSP430F20x3 have built-in communication capability using synchronous protocols (SPI or I2C) and a 10-bit A/D converter (MSP430F20x2) or a 16-bit sigma-delta A/D converter (MSP430F20x3).

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Typical applications include sensor systems that capture analog signals, convert them to digital values, and then process the data for display or for transmission to a host system. Stand alone RF sensor front end is another area of application.

## Device Pinout, MSP430F20x1

See port schematics section for detailed I/O information.

## Device Pinout, MSP430F20x2

See port schematics section for detailed I/O information.

## Device Pinout, MSP430F20x3

See port schematics section for detailed I/O information.

### Functional Block Diagram, MSP430F20x1

NOTE: See port schematics section for detailed I/O information.

### Functional Block Diagram, MSP430F20x2

NOTE: See port schematics section for detailed I/O information.

The block diagram illustrates the internal architecture of the ATtiny10 microcontroller. Key components and their connections include:

- Power and Ground:** VCC and VSS pins at the top for power supply.
- External Connections:**
  - XIN/XOUT:** Crystal input/output pins.
  - P1.x & JTAG:** 8 pins for programming and debugging.
  - P2.x & XIN/XOUT:** 2 pins for additional I/O or crystal connection.
  - RST/NMI:** Reset/Non-Maskable Interrupt pin at the bottom.
- Internal Blocks:**
  - Basic Clock System+:** Generates ACLK and SMCLK signals.
  - Flash:** 2kB / 1kB memory.
  - RAM:** 128B memory.
  - SD16\_A:** 16-bit Sigma-Delta A/D Converter.
  - Port P1:** 8 I/O pins with interrupt capability and pull-up/down resistors.
  - Port P2:** 2 I/O pins with interrupt capability and pull-up/down resistors.
  - 16MHz CPU incl. 16 Registers:** The central processing unit.
  - Emulation (2BP):** In-circuit emulator block.
  - JTAG Interface:** For debugging.
  - Spy-Bi Wire:** For non-invasive debugging.
  - Brownout Protection:** Protects the device from low-voltage operation.
  - Watchdog WDT+:** 15/16-Bit watchdog timer.
  - Timer\_A2:** 2 CC Registers.
  - USI:** Universal Serial Interface for SPI and I2C.
- Interconnects:** MAB (Master Address Bus) and MDB (Master Data Bus) connect the CPU to the memory and peripheral blocks.

(1) TDO or TDI is selected via JTAG instruction.

(2) If XOUT/P2.7 is used as an input, excess current flows until P2SEL.7 is cleared. This is due to the oscillator output driver connection to this pad after reset.

(1) TDO or TDI is selected via JTAG instruction.

(2) If XOUT/P2.7 is used as an input, excess current flows until P2SEL.7 is cleared. This is due to the oscillator output driver connection to this pad after reset.

(1) TDO or TDI is selected via JTAG instruction.

(2) If XOUT/P2.7 is used as an input, excess current flows until P2SEL.7 is cleared. This is due to the oscillator output driver connection to this pad after reset.

## SHORT-FORM DESCRIPTION

### CPU

The MSP430 CPU has a 16-bit RISC architecture that is highly transparent to the application. All operations, other than program-flow instructions, are performed as register operations in conjunction with seven addressing modes for source operand and four addressing modes for destination operand.

The CPU is integrated with 16 registers that provide reduced instruction execution time. The register-to-register operation execution time is one cycle of the CPU clock.

Four of the registers, R0 to R3, are dedicated as program counter, stack pointer, status register, and constant generator respectively. The remaining registers are general-purpose registers.

Peripherals are connected to the CPU using data, address, and control buses, and can be handled with all instructions.

### Instruction Set

The instruction set consists of 51 instructions with three formats and seven address modes. Each instruction can operate on word and byte data. [Table 5](#) shows examples of the three types of instruction formats; [Table 6](#) shows the address modes.

|                          |           |
|--------------------------|-----------|
| Program Counter          | PC/R0     |
| Stack Pointer            | SP/R1     |
| Status Register          | SR/CG1/R2 |
| Constant Generator       | CG2/R3    |
| General-Purpose Register | R4        |

(1) S = source, D = destination

## Operating Modes

The MSP430 has one active mode and five software-selectable low-power modes of operation. An interrupt event can wake the device from any of the five low-power modes, service the request, and restore back to the low-power mode on return from the interrupt program.

The following six operating modes can be configured by software:

- Active mode (AM)
  - All clocks are active
- Low-power mode 0 (LPM0)
  - CPU is disabled
  - ACLK and SMCLK remain active
  - MCLK is disabled
- Low-power mode 1 (LPM1)
  - CPU is disabled
  - ACLK and SMCLK remain active. MCLK is disabled
  - DCO's dc-generator is disabled if DCO not used in active mode
- Low-power mode 2 (LPM2)
  - CPU is disabled
  - MCLK and SMCLK are disabled
  - DCO's dc-generator remains enabled
  - ACLK remains active
- Low-power mode 3 (LPM3)
  - CPU is disabled
  - MCLK and SMCLK are disabled
  - DCO's dc-generator is disabled
  - ACLK remains active
- Low-power mode 4 (LPM4)
  - CPU is disabled
  - ACLK is disabled
  - MCLK and SMCLK are disabled
  - DCO's dc-generator is disabled
  - Crystal oscillator is stopped

## Interrupt Vector Addresses

The interrupt vectors and the power-up starting address are located in the address range of 0FFFFh to 0FFC0h. The vector contains the 16-bit address of the appropriate interrupt handler instruction sequence.

If the reset vector (located at address 0FFFEh) contains 0FFFFh (for example, flash is not programmed) the CPU goes into LPM4 immediately after power-up.

**Table 7. Interrupt Sources**

| INTERRUPT SOURCE                                                                                       | INTERRUPT FLAG                                              | SYSTEM INTERRUPT                                     | WORD ADDRESS     | PRIORITY        |

(1) A reset is generated if the CPU tries to fetch instructions from within the module register memory address range (0h to 01FFh) or from within unused address ranges.

(2) Multiple source flags

(3) (non)-maskable: the individual interrupt-enable bit can disable an interrupt event, but the general interrupt enable cannot.

(4) Interrupt flags are located in the module.

(5) The interrupt vectors at addresses 0FFDEh to 0FFC0h are not used in this device and can be used for regular program code if necessary.

## Special Function Registers

Most interrupt and module enable bits are collected into the lowest address space. Special function register bits not allocated to a functional purpose are not physically present in the device. Simple software access is provided with this arrangement.

## Flash Memory

The flash memory can be programmed via the Spy-Bi-Wire/JTAG port, or in-system by the CPU. The CPU can perform single-byte and single-word writes to the flash memory. Features of the flash memory include:

- Flash memory has n segments of main memory and four segments of information memory (A to D) of 64 bytes each. Each segment in main memory is 512 bytes in size.
- Segments 0 to n may be erased in one step, or each segment may be individually erased.
- Segments A to D can be erased individually, or as a group with segments 0 to n. Segments A to D are also called *information memory*.
- Segment A contains calibration data. After reset segment A is protected against programming and erasing. It can be unlocked but care should be taken not to erase this segment if the device-specific calibration data is required.

## Peripherals

Peripherals are connected to the CPU through data, address, and control busses and can be handled using all instructions. For complete module descriptions, refer to the *MSP430F2xx Family User's Guide*.

### Oscillator and System Clock

The clock system is supported by the basic clock module that includes support for a 32768-Hz watch crystal oscillator, an internal very-low-power low-frequency oscillator and an internal digitally-controlled oscillator (DCO). The basic clock module is designed to meet the requirements of both low system cost and low power consumption. The internal DCO provides a fast turn-on clock source and stabilizes in less than 1  $\mu$ s. The basic clock module provides the following clock signals:

- Auxiliary clock (ACLK), sourced either from a 32768-Hz watch crystal or the internal LF oscillator.
- Main clock (MCLK), the system clock used by the CPU.
- Sub-Main clock (SMCLK), the sub-system clock used by the peripheral modules.

**Table 11. DCO Calibration Data (Provided From Factory in Flash Information Memory Segment A)**

| DCO FREQUENCY | CALIBRATION REGISTER | SIZE | ADDRESS |
|---------------|----------------------|------|---------|
| 1 MHz         | CALBC1_1MHZ          | byte | 010FFh  |
|               | CALDCO_1MHZ          | byte | 010FEh  |
| 8 MHz         | CALBC1_8MHZ          | byte | 010FDh  |
|               | CALDCO_8MHZ          | byte | 010FCh  |
| 12 MHz        | CALBC1_12MHZ         | byte | 010FBh  |
|               | CALDCO_12MHZ         | byte | 010FAh  |
| 16 MHz        | CALBC1_16MHZ         | byte | 010F9h  |
|               | CALDCO_16MHZ         | byte | 010F8h  |

### Brownout

The brownout circuit is implemented to provide the proper internal reset signal to the device during power on and power off.

### Digital I/O

There is one 8-bit I/O port implemented—port P1—and two bits of I/O port P2:

- All individual I/O bits are independently programmable.
- Any combination of input, output, and interrupt condition is possible.
- Edge-selectable interrupt input capability for all the eight bits of port P1 and the two bits of port P2.
- Read and write access to port-control registers is supported by all instructions.
- Each I/O has an individually programmable pullup or pulldown resistor.

### Watchdog Timer (WDT+)

The primary function of the watchdog timer (WDT+) module is to perform a controlled system restart after a software problem occurs. If the selected time interval expires, a system reset is generated. If the watchdog function is not needed in an application, the module can be disabled or configured as an interval timer and can generate interrupts at selected time intervals.

## Timer\_A2

Timer\_A2 is a 16-bit timer/counter with two capture/compare registers. Timer\_A2 can support multiple capture/compares, PWM outputs, and interval timing. Timer\_A2 also has extensive interrupt capabilities. Interrupts may be generated from the counter on overflow conditions and from each of the capture/compare registers.

**Table 12. Timer\_A2 Signal Connections (MSP430F20x1)**

| INPUT PIN NUMBER |          | DEVICE INPUT SIGNAL | MODULE INPUT NAME | MODULE BLOCK | MODULE OUTPUT SIGNAL | OUTPUT PIN NUMBER |           |

### **Comparator\_A+ (MSP430F20x1)**

The primary function of the comparator\_A+ module is to support precision slope analog-to-digital conversions, battery-voltage supervision, and monitoring of external analog signals.

### **USI (MSP430F20x2 and MSP430F20x3)**

The universal serial interface (USI) module is used for serial data communication and provides the basic hardware for synchronous communication protocols like SPI and I2C.

### **ADC10 (MSP430F20x2)**

The ADC10 module supports fast, 10-bit analog-to-digital conversions. The module implements a 10-bit SAR core, sample select control, reference generator and data transfer controller, or DTC, for automatic conversion result handling, allowing ADC samples to be converted and stored without any CPU intervention.

### **SD16\_A (MSP430F20x3)**

The SD16\_A module supports 16-bit analog-to-digital conversions. The module implements a 16-bit sigma-delta core and reference generator. In addition to external analog inputs, internal  $V_{CC}$  sense and temperature sensors are also available.

## Absolute Maximum Ratings<sup>(1)</sup>

|                                              |                     |                            |
|----------------------------------------------|---------------------|----------------------------|
| Voltage applied at $V_{CC}$ to $V_{SS}$      |                     | -0.3 V to 4.1 V            |
| Voltage applied to any pin <sup>(2)</sup>    |                     | -0.3 V to $V_{CC} + 0.3$ V |
| Diode current at any device terminal         |                     | $\pm 2$ mA                 |
| $T_{stg}$ Storage temperature <sup>(3)</sup> | Unprogrammed device | -55°C to 150°C             |
|                                              | Programmed device   | -55°C to 150°C             |

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages referenced to  $V_{SS}$ . The JTAG fuse-blow voltage,  $V_{FB}$ , is allowed to exceed the absolute maximum rating. The voltage is applied to the TEST pin when blowing the JTAG fuse.
- (3) Higher temperature may be applied during board soldering according to the current JEDEC J-STD-020 specification with peak reflow temperatures not higher than classified on the device label on the shipping boxes or reels.

## Recommended Operating Conditions

Typical values are specified at  $V_{CC} = 3.3$  V and  $T_A = 25^\circ\text{C}$  (unless otherwise noted)

|                                                                             |                                                    | MIN | NOM | MAX | UNIT |

|                                                                             | $V_{CC} = 2.7$ V,<br>Duty cycle = 50% $\pm$ 10%    | dc  |     | 12  |      |
|                                                                             | $V_{CC} \geq 3.3$ V,<br>Duty cycle = 50% $\pm$ 10% | dc  |     | 16  |      |

- (1) The MSP430 CPU is clocked directly with MCLK. Both the high and low phase of MCLK must not exceed the pulse width of the specified maximum frequency.
- (2) Modules might have a different maximum input clock specification. See the specification of the respective module in this data sheet.

Note: Minimum processor frequency is defined by system clock. Flash program or erase operations require a minimum  $V_{CC}$  of 2.2 V.

(1) All inputs are tied to 0 V or to  $V_{CC}$ . Outputs do not source or sink any current.

(2) The currents are characterized with a Micro Crystal CC4V-T1A SMD crystal with a load capacitance of 9 pF. The internal and external load capacitance is chosen to closely match the required 9 pF.

## Typical Characteristics - Active Mode Supply Current (Into $V_{CC}$ )

Figure 2.

Figure 3.

## Low-Power Mode Supply Currents (Into $V_{CC}$ ) Excluding External Current

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)<sup>(1) (2)</sup>

(1) All inputs are tied to 0 V or to  $V_{CC}$ . Outputs do not source or sink any current.

(2) The currents are characterized with a Micro Crystal CC4V-T1A SMD crystal with a load capacitance of 9 pF.

(3) Current for brownout and WDT clocked by SMCLK included.

(4) Current for brownout and WDT clocked by ACLK included.

(5) Current for brownout included.

## Schmitt-Trigger Inputs (Ports P1 and P2)

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

## Inputs (Ports P1 and P2)

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER                                    | TEST CONDITIONS                                                                              | V <sub>CC</sub> | MIN | TYP | MAX | UNIT |
|----------------------------------------------|----------------------------------------------------------------------------------------------|-----------------|-----|-----|-----|------|
| t <sub>(int)</sub> External interrupt timing | Port P1, P2: P1.x to P2.x, External trigger pulse width to set interrupt flag <sup>(1)</sup> | 2.2 V, 3 V      | 20  |     |     | ns   |

- (1) An external signal sets the interrupt flag every time the minimum interrupt pulse width t<sub>(int)</sub> is met. It may be set even with trigger signals shorter than t<sub>(int)</sub>.

## Leakage Current (Ports P1 and P2)

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER                                             | TEST CONDITIONS | V <sub>CC</sub> | MIN | MAX | UNIT |
|-------------------------------------------------------|-----------------|-----------------|-----|-----|------|
| I <sub>lkg(Px.y)</sub> High-impedance leakage current | (1) (2)         | 2.2 V, 3 V      |     | ±50 | nA   |

- (1) The leakage current is measured with V<sub>SS</sub> or V<sub>CC</sub> applied to the corresponding pins, unless otherwise noted.  
(2) The leakage of the digital port pins is measured individually. The port pin is selected for input and the pullup or pulldown resistor is disabled.

## Outputs (Ports P1 and P2)

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER                                 | TEST CONDITIONS                               | V <sub>CC</sub> | MIN                    | TYP | MAX                    | UNIT |
|-------------------------------------------|-----------------------------------------------|-----------------|------------------------|-----|------------------------|------|
| V <sub>OH</sub> High-level output voltage | I <sub>(OHmax)</sub> = -1.5 mA <sup>(1)</sup> | 2.2 V           | V <sub>CC</sub> - 0.25 |     | V <sub>CC</sub>        | V    |
|                                           | I <sub>(OHmax)</sub> = -6 mA <sup>(2)</sup>   | 2.2 V           | V <sub>CC</sub> - 0.6  |     | V <sub>CC</sub>        |      |
|                                           | I <sub>(OHmax)</sub> = -1.5 mA <sup>(1)</sup> | 3 V             | V <sub>CC</sub> - 0.25 |     | V <sub>CC</sub>        |      |
|                                           | I <sub>(OHmax)</sub> = -6 mA <sup>(2)</sup>   | 3 V             | V <sub>CC</sub> - 0.6  |     | V <sub>CC</sub>        |      |
| V <sub>OL</sub> Low-level output voltage  | I <sub>(OLmax)</sub> = 1.5 mA <sup>(1)</sup>  | 2.2 V           | V <sub>SS</sub>        |     | V <sub>SS</sub> + 0.25 | V    |
|                                           | I <sub>(OLmax)</sub> = 6 mA <sup>(2)</sup>    | 2.2 V           | V <sub>SS</sub>        |     | V <sub>SS</sub> + 0.6  |      |
|                                           | I <sub>(OLmax)</sub> = 1.5 mA <sup>(1)</sup>  | 3 V             | V <sub>SS</sub>        |     | V <sub>SS</sub> + 0.25 |      |
|                                           | I <sub>(OLmax)</sub> = 6 mA <sup>(2)</sup>    | 3 V             | V <sub>SS</sub>        |     | V <sub>SS</sub> + 0.6  |      |

- (1) The maximum total current, I<sub>(OHmax)</sub> and I<sub>(OLmax)</sub>, for all outputs combined should not exceed ±12 mA to hold the maximum voltage drop specified.
- (2) The maximum total current, I<sub>(OHmax)</sub> and I<sub>(OLmax)</sub>, for all outputs combined should not exceed ±48 mA to hold the maximum voltage drop specified.

## Output Frequency (Ports P1 and P2)

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER                                           | TEST CONDITIONS                                                              | V <sub>CC</sub> | MIN | TYP | MAX | UNIT |
|-----------------------------------------------------|------------------------------------------------------------------------------|-----------------|-----|-----|-----|------|
| f <sub>Px,y</sub> Port output frequency (with load) | P1.4/SMCLK, C <sub>L</sub> = 20 pF, R <sub>L</sub> = 1 kΩ <sup>(1)</sup> (2) | 2.2 V           |     |     | 10  | MHz  |
|                                                     |                                                                              | 3 V             |     |     | 12  |      |
| f <sub>Port*CLK</sub> Clock output frequency        | P2.0/ACLK, P1.4/SMCLK, C <sub>L</sub> = 20 pF <sup>(2)</sup>                 | 2.2 V           |     |     | 12  | MHz  |
|                                                     |                                                                              | 3 V             |     |     | 16  |      |

- (1) A resistive divider with 2 × 0.5 kΩ between V<sub>CC</sub> and V<sub>SS</sub> is used as load. The output is connected to the center tap of the divider.
- (2) The output voltage reaches at least 10% and 90% V<sub>CC</sub> at the specified toggle frequency.

## Typical Characteristics - Outputs

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

## POR and Brownout Reset (BOR)<sup>(1)(2)</sup>

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER               | TEST CONDITIONS                                                                      | V <sub>CC</sub>              | MIN | TYP                           | MAX  | UNIT |
|-------------------------|--------------------------------------------------------------------------------------|------------------------------|-----|-------------------------------|------|------|
| V <sub>CC(start)</sub>  | See Figure 8                                                                         | dV <sub>CC</sub> /dt ≤ 3 V/s |     | 0.7 ×<br>V <sub>(B_IT-)</sub> |      | V    |
| V <sub>(B_IT-)</sub>    | See Figure 8 through Figure 10                                                       | dV <sub>CC</sub> /dt ≤ 3 V/s |     |                               | 1.71 | V    |
| V <sub>hys(B_IT-)</sub> | See Figure 8                                                                         | dV <sub>CC</sub> /dt ≤ 3 V/s | 70  | 130                           | 210  | mV   |
| t <sub>d(BOR)</sub>     | See Figure 8                                                                         |                              |     |                               | 2000 | μs   |
| t <sub>(reset)</sub>    | Pulse duration needed at $\overline{\text{RST}}$ /NMI pin to accept reset internally | 2.2 V,<br>3 V                | 2   |                               |      | μs   |

- (1) The current consumption of the brownout module is already included in the I<sub>CC</sub> current consumption data. The voltage level V<sub>(B\_IT-)</sub> + V<sub>hys(B\_IT-)</sub> is ≤ 1.8 V.
- (2) During power up, the CPU begins code execution following a period of t<sub>d(BOR)</sub> after V<sub>CC</sub> = V<sub>(B\_IT-)</sub> + V<sub>hys(B\_IT-)</sub>. The default DCO settings must not be changed until V<sub>CC</sub> ≥ V<sub>CC(min)</sub>, where V<sub>CC(min)</sub> is the minimum supply voltage for the desired operating frequency.

**Figure 8. POR/Brownout Reset (BOR) vs Supply Voltage**

## Typical Characteristics - POR/Brownout Reset (BOR)

Figure 9.  $V_{CC(drop)}$  Level With a Square Voltage Drop to Generate a POR/Brownout Signal

Figure 10.  $V_{CC(drop)}$  Level With a Triangle Voltage Drop to Generate a POR/Brownout Signal

## Main DCO Characteristics

- All ranges selected by RSELx overlap with RSELx + 1: RSELx = 0 overlaps RSELx = 1, ... RSELx = 14 overlaps RSELx = 15.
- DCO control bits DCOx have a step size as defined by parameter S<sub>DCO</sub>.
- Modulation control bits MODx select how often f<sub>DCO(RSEL,DCO+1)</sub> is used within the period of 32 DCOCLK cycles. The frequency f<sub>DCO(RSEL,DCO)</sub> is used for the remaining cycles. The frequency is an average equal to:

$$f_{\text{average}} = \frac{32 \times f_{\text{DCO(RSEL,DCO)}} \times f_{\text{DCO(RSEL,DCO+1)}}}{\text{MOD} \times f_{\text{DCO(RSEL,DCO)}} + (32 - \text{MOD}) \times f_{\text{DCO(RSEL,DCO+1)}}}$$

## DCO Frequency

## Crystal Oscillator, XT1, Low-Frequency Mode<sup>(1)</sup>

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER                   | TEST CONDITIONS                                                   | V <sub>CC</sub>                                                                    | MIN        | TYP   | MAX   | UNIT |    |
|-----------------------------|-------------------------------------------------------------------|------------------------------------------------------------------------------------|------------|-------|-------|------|----|
| f <sub>LFXT1,LF</sub>       | LFXT1 oscillator crystal frequency, LF mode 0, 1                  | 1.8 V to 3.6 V                                                                     | 32768      |       |       | Hz   |    |
| f <sub>LFXT1,LF,logic</sub> | LFXT1 oscillator logic level square wave input frequency, LF mode | 1.8 V to 3.6 V                                                                     | 10000      | 32768 | 50000 | Hz   |    |
| O <sub>A,LF</sub>           | Oscillation allowance for LF crystals                             | XTS = 0, LFXT1Sx = 0, f <sub>LFXT1,LF</sub> = 32768 Hz, C <sub>L,eff</sub> = 6 pF  | 500        |       |       | kΩ   |    |
|                             |                                                                   | XTS = 0, LFXT1Sx = 0, f <sub>LFXT1,LF</sub> = 32768 Hz, C <sub>L,eff</sub> = 12 pF | 200        |       |       |      |    |
| C <sub>L,eff</sub>          | Integrated effective load capacitance, LF mode <sup>(2)</sup>     | XTS = 0, XCAPx = 0                                                                 | 1          |       |       | pF   |    |
|                             |                                                                   | XTS = 0, XCAPx = 1                                                                 | 5.5        |       |       |      |    |
|                             |                                                                   | XTS = 0, XCAPx = 2                                                                 | 8.5        |       |       |      |    |
|                             |                                                                   | XTS = 0, XCAPx = 3                                                                 | 11         |       |       |      |    |
| Duty cycle, LF mode         |                                                                   | XTS = 0, Measured at P1.0/ACLK, f <sub>LFXT1,LF</sub> = 32768 Hz                   | 2.2 V, 3 V | 30    | 50    | 70   | %  |
| f <sub>Fault,LF</sub>       | Oscillator fault frequency, LF mode <sup>(3)</sup>                | XTS = 0, LFXT1Sx = 3 <sup>(4)</sup>                                                | 2.2 V, 3 V | 10    | 10000 |      | Hz |

- (1) To improve EMI on the XT1 oscillator, the following guidelines should be observed.
  - (a) Keep the trace between the device and the crystal as short as possible.
  - (b) Design a good ground plane around the oscillator pins.
  - (c) Prevent crosstalk from other clock or data lines into oscillator pins XIN and XOUT.
  - (d) Avoid running PCB traces underneath or adjacent to the XIN and XOUT pins.
  - (e) Use assembly materials and praxis to avoid any parasitic load on the oscillator XIN and XOUT pins.
  - (f) If conformal coating is used, ensure that it does not induce capacitive/resistive leakage between the oscillator pins.
  - (g) Do not route the XOUT line to the JTAG header to support the serial programming adapter as shown in other documentation. This signal is no longer required for the serial programming adapter.
- (2) Includes parasitic bond and package capacitance (approximately 2 pF per pin).  
Since the PCB adds additional capacitance, it is recommended to verify the correct load by measuring the ACLK frequency. For a correct setup, the effective load capacitance should always match the specification of the used crystal.
- (3) Frequencies below the MIN specification set the fault flag. Frequencies above the MAX specification do not set the fault flag. Frequencies in between might set the flag.
- (4) Measured with logic-level input frequency but also applies to operation with crystals.

## Internal Very-Low-Power Low-Frequency Oscillator (VLO)

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER                           | T <sub>A</sub>                        | V <sub>CC</sub> | MIN | TYP | MAX | UNIT |
|-------------------------------------|---------------------------------------|-----------------|-----|-----|-----|------|
| f <sub>VLO</sub>                    | -40°C to 85°C                         | 2.2 V, 3 V      | 4   | 12  | 20  | kHz  |
|                                     | 105°C                                 |                 |     |     | 22  |      |
| df <sub>VLO</sub> /dT               | I: -40°C to 85°C<br>T: -40°C to 105°C | 2.2 V, 3 V      |     | 0.5 |     | %/°C |
| df <sub>VLO</sub> /dV <sub>CC</sub> | 25°C                                  | 1.8 V to 3.6 V  |     | 4   |     | %/V  |

- (1) Calculated using the box method:  
I: (MAX(-40 to 85°C) - MIN(-40 to 85°C)) / MIN(-40 to 85°C) / (85°C - (-40°C))  
T: (MAX(-40 to 105°C) - MIN(-40 to 105°C)) / MIN(-40 to 105°C) / (105°C - (-40°C))
- (2) Calculated using the box method: (MAX(1.8 to 3.6 V) - MIN(1.8 to 3.6 V)) / MIN(1.8 to 3.6 V) / (3.6 V - 1.8 V)

(1) The leakage current for the Comparator\_A+ terminals is identical to I<sub>lkg(Px,y)</sub> specification.

(2) The input offset voltage can be cancelled by using the CAEX bit to invert the Comparator\_A+ inputs on successive measurements. The two successive measurements are then summed together.

(3) Response time measured at P1.3/CAOUT

(1) The leakage current is defined in the leakage current table with P<sub>x.x</sub>/A<sub>x</sub> parameter.

(2) The analog input voltage range must be within the selected reference voltage range V<sub>R+</sub> to V<sub>R-</sub> for valid conversion results.

(3) The internal reference supply current is not included in current consumption parameter I<sub>ADC10</sub>.

(4) The internal reference current is supplied via terminal V<sub>CC</sub>. Consumption is independent of the ADC10ON control bit, unless a conversion is active. The REFON bit enables the built-in reference to settle before starting an A/D conversion.

(1) The capacitance applied to the internal buffer operational amplifier, if switched to terminal P1.4/SMCLK/A4/VREF+/VeREF+/TCK (REFOUT = 1), must be limited; otherwise, the reference buffer may become unstable.

(2) The condition is that the error in a conversion started after t<sub>REFON</sub> or t<sub>RefBuf</sub> is less than ±0.5 LSB.

- (1) The external reference is used during conversion to charge and discharge the capacitance array. The input capacitance, C<sub>I</sub>, is also the dynamic load for an external reference during conversion. The dynamic impedance of the reference supply should follow the recommendations on analog-source impedance to allow the charge to settle for 10-bit accuracy.
- (2) The accuracy limits the minimum positive external reference voltage. Lower reference voltage levels may be applied with reduced accuracy requirements.
- (3) Under this condition, the external reference is internally buffered. The reference buffer is active and requires the reference buffer supply current I<sub>REFB</sub>. The current consumption can be limited to the sample and conversion period with REBURST = 1.
- (4) The accuracy limits the maximum negative external reference voltage. Higher reference voltage levels may be applied with reduced accuracy requirements.
- (5) The accuracy limits the minimum external differential reference voltage. Lower differential reference voltage levels may be applied with reduced accuracy requirements.

|                                                                                           |                                                                       | 3 V             | 1.46 | 1.5  | 1.54 |       |
| t <sub>VMID(sample)</sub> Sample time required if channel 11 is selected <sup>(5)</sup>   | ADC10ON = 1, INCHx = 0Bh, Error of conversion result ≤ 1 LSB          | 2.2 V           | 1400 |      |      | ns    |
|                                                                                           |                                                                       | 3 V             | 1220 |      |      |       |

(1) The sensor current I<sub>SENSOR</sub> is consumed if (ADC10ON = 1 and REFON = 1), or (ADC10ON = 1 and INCH = 0Ah and sample signal is high). When REFON = 1, I<sub>SENSOR</sub> is included in I<sub>REF+</sub>. When REFON = 0, I<sub>SENSOR</sub> applies during conversion of the temperature sensor input (INCH = 0Ah).

(2) The following formula can be used to calculate the temperature sensor output voltage:

$$V_{\text{Sensor, typ}} = TC_{\text{Sensor}} (273 + T [^{\circ}\text{C}]) + V_{\text{Offset, sensor}} [\text{mV}] \text{ or}$$

$$V_{\text{Sensor, typ}} = TC_{\text{Sensor}} T [^{\circ}\text{C}] + V_{\text{Sensor}}(T_A = 0^{\circ}\text{C}) [\text{mV}]$$

(3) Results based on characterization and/or production test, not TC<sub>Sensor</sub> or V<sub>Offset, sensor</sub>.

(4) No additional current is needed. The V<sub>MID</sub> is used during sampling.

(5) The on time, t<sub>VMID(on)</sub>, is included in the sampling time, t<sub>VMID(sample)</sub>; no additional on time is needed.

## SD16\_A, Power Supply and Recommended Operating Conditions (MSP430F20x3)

| V <sub>IC</sub> Common-mode input voltage range                                           |                            |                 | AV <sub>SS</sub> - 0.1      |      | AV <sub>CC</sub>            | V    |

- (1) The analog input range depends on the reference voltage applied to V<sub>REF</sub>. If V<sub>REF</sub> is sourced externally, the full-scale range is defined by V<sub>FSR+</sub> = +(V<sub>REF</sub>/2)/GAIN and V<sub>FSR-</sub> = -(V<sub>REF</sub>/2)/GAIN. The analog input range should not exceed 80% of V<sub>FSR+</sub> or V<sub>FSR-</sub>.

## SD16\_A, Temperature Sensor<sup>(1)</sup> (MSP430F20x3)

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER                   |                                      | TEST CONDITIONS                                     | V <sub>CC</sub> | MIN  | TYP  | MAX  | UNIT  |
|-----------------------------|--------------------------------------|-----------------------------------------------------|-----------------|------|------|------|-------|
| TC <sub>Sensor</sub>        | Sensor temperature coefficient       |                                                     |                 | 1.18 | 1.32 | 1.46 | mV/°C |
| V <sub>Offset, Sensor</sub> | Sensor offset voltage                |                                                     |                 | -100 |      | 100  | mV    |
| V <sub>Sensor</sub>         | Sensor output voltage <sup>(2)</sup> | Temperature sensor voltage at T <sub>A</sub> = 85°C | 3 V             | 435  | 475  | 515  | mV    |
|                             |                                      | Temperature sensor voltage at T <sub>A</sub> = 25°C |                 | 355  | 395  | 435  |       |
|                             |                                      | Temperature sensor voltage at T <sub>A</sub> = 0°C  |                 | 320  | 360  | 400  |       |

(1) Values are not based on calculations using TC<sub>Sensor</sub> or V<sub>Offset, sensor</sub> but on measurements.

(2) The following formula can be used to calculate the temperature sensor output voltage:

$$V_{\text{Sensor, typ}} = TC_{\text{Sensor}} (273 + T [^{\circ}\text{C}]) + V_{\text{Offset, sensor}} [\text{mV}] \text{ or}$$

$$V_{\text{Sensor, typ}} = TC_{\text{Sensor}} T [^{\circ}\text{C}] + V_{\text{Sensor}}(T_A = 0^{\circ}\text{C}) [\text{mV}]$$

## Flash Memory

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER                  |                                                     | TEST CONDITIONS       | V <sub>CC</sub> | MIN             | TYP             | MAX | UNIT             |
|----------------------------|-----------------------------------------------------|-----------------------|-----------------|-----------------|-----------------|-----|------------------|
| V <sub>CC(PGM/ERASE)</sub> | Program and erase supply voltage                    |                       |                 | 2.2             |                 | 3.6 | V                |
| f <sub>FTG</sub>           | Flash timing generator frequency                    |                       |                 | 257             |                 | 476 | kHz              |
| I <sub>PGM</sub>           | Supply current from V <sub>CC</sub> during program  |                       | 2.2 V/3.6 V     |                 | 1               | 5   | mA               |
| I <sub>ERASE</sub>         | Supply current from V <sub>CC</sub> during erase    |                       | 2.2 V/3.6 V     |                 | 1               | 7   | mA               |
| t <sub>CPT</sub>           | Cumulative program time <sup>(1)</sup>              |                       | 2.2 V/3.6 V     |                 |                 | 10  | ms               |
| t <sub>CMErase</sub>       | Cumulative mass erase time                          |                       | 2.2 V/3.6 V     | 20              |                 |     | ms               |
|                            | Program/erase endurance                             |                       |                 | 10 <sup>4</sup> | 10 <sup>5</sup> |     | cycles           |
| t <sub>Retention</sub>     | Data retention duration                             | T <sub>J</sub> = 25°C |                 | 100             |                 |     | years            |
| t <sub>Word</sub>          | Word or byte program time                           | (2)                   |                 |                 | 30              |     | t <sub>FTG</sub> |
| t <sub>Block, 0</sub>      | Block program time for first byte or word           | (2)                   |                 |                 | 25              |     | t <sub>FTG</sub> |
| t <sub>Block, 1-63</sub>   | Block program time for each additional byte or word | (2)                   |                 |                 | 18              |     | t <sub>FTG</sub> |
| t <sub>Block, End</sub>    | Block program end-sequence wait time                | (2)                   |                 |                 | 6               |     | t <sub>FTG</sub> |
| t <sub>Mass Erase</sub>    | Mass erase time                                     | (2)                   |                 |                 | 10593           |     | t <sub>FTG</sub> |
| t <sub>Seg Erase</sub>     | Segment erase time                                  | (2)                   |                 |                 | 4819            |     | t <sub>FTG</sub> |

(1) The cumulative program time must not be exceeded when writing to a 64-byte flash block. This parameter applies to all programming methods: individual word/byte write and block write modes.

(2) These values are hardwired into the Flash Controller's state machine (t<sub>FTG</sub> = 1/f<sub>FTG</sub>).

## RAM

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER           | TEST CONDITIONS                                           | MIN | MAX | UNIT |
|---------------------|-----------------------------------------------------------|-----|-----|------|
| V <sub>(RAMh)</sub> | RAM retention supply voltage <sup>(1)</sup><br>CPU halted | 1.6 |     | V    |

(1) This parameter defines the minimum supply voltage V<sub>CC</sub> when the data in RAM remains unchanged. No program execution should happen during this supply voltage condition.

## JTAG and Spy-Bi-Wire Interface

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER             |                                                                                       | V <sub>CC</sub> | MIN   | TYP | MAX | UNIT |
|-----------------------|---------------------------------------------------------------------------------------|-----------------|-------|-----|-----|------|
| f <sub>SBW</sub>      | Spy-Bi-Wire input frequency                                                           | 2.2 V, 3 V      | 0     |     | 20  | MHz  |
| t <sub>SBW,Low</sub>  | Spy-Bi-Wire low clock pulse length                                                    | 2.2 V, 3 V      | 0.025 |     | 15  | μs   |
| t <sub>SBW,En</sub>   | Spy-Bi-Wire enable time (TEST high to acceptance of first clock edge <sup>(1)</sup> ) | 2.2 V, 3 V      |       |     | 1   | μs   |
| t <sub>SBW,Ret</sub>  | Spy-Bi-Wire return to normal operation time                                           | 2.2 V, 3 V      | 15    |     | 100 | μs   |
| f <sub>TCK</sub>      | TCK input frequency <sup>(2)</sup>                                                    | 2.2 V           | 0     |     | 5   | MHz  |
|                       |                                                                                       | 3 V             | 0     |     | 10  | MHz  |
| R <sub>Internal</sub> | Internal pulldown resistance on TEST                                                  | 2.2 V, 3 V      | 25    | 60  | 90  | kΩ   |

(1) Tools accessing the Spy-Bi-Wire interface need to wait for the maximum t<sub>SBW,En</sub> time after pulling the TEST/SBWCLK pin high before applying the first SBWCLK clock edge.

(2) f<sub>TCK</sub> may be restricted to meet the timing requirements of the module selected.

## JTAG Fuse<sup>(1)</sup>

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

| PARAMETER           |                                           | TEST CONDITIONS       | MIN | MAX | UNIT |
|---------------------|-------------------------------------------|-----------------------|-----|-----|------|
| V <sub>CC(FB)</sub> | Supply voltage during fuse-blow condition | T <sub>A</sub> = 25°C | 2.5 |     | V    |
| V <sub>FB</sub>     | Voltage level on TEST for fuse blow       |                       | 6   | 7   | V    |
| I <sub>FB</sub>     | Supply current into TEST during fuse blow |                       |     | 100 | mA   |
| t <sub>FB</sub>     | Time to blow fuse                         |                       |     | 1   | ms   |

(1) Once the fuse is blown, no further access to the JTAG/Test, Spy-Bi-Wire, and emulation feature is possible, and JTAG is switched to bypass mode.

## APPLICATION INFORMATION, MSP430F20X1

### Port P1 (P1.0 to P1.3) Pin Schematics, MSP430F20x1

Table 16. Control Signal "From Comparator\_A+"

|                     |   | Timer_A2.CCI1A                   | 0                                     | 1       | 0      |
|                     |   | Timer_A2.TA1                     | 1                                     | 1       | 0      |
|                     |   | CA2 <sup>(3)</sup>               | X                                     | X       | 1      |
| P1.3/CAOUT/CA3      | 3 | P1.3 <sup>(2)</sup> input/output | 0/1                                   | 0       | 0      |
|                     |   | N/A                              | 0                                     | 1       | 0      |
|                     |   | CAOUT                            | 1                                     | 1       | 0      |
|                     |   | CA3 <sup>(3)</sup>               | X                                     | X       | 1      |

(1) X = Don't care

(2) Default after reset (PUC/POR)

(3) Setting the CAPD.x bit disables the output driver and the input Schmitt trigger to prevent parasitic cross currents when applying analog signals. Selecting the CAx input pin to the comparator multiplexer with the P2CAx bits automatically disables the input buffer for that pin, regardless of the state of the associated CAPD.x bit.

## Port P1 (P1.4 to P1.6) Pin Schematics, MSP430F20x1

Table 18. Control Signal "From Comparator\_A+"

| PIN NAME           | FUNCTION | SIGNAL "From Comparator_A+" = 1 |       |       |
|--------------------|----------|---------------------------------|-------|-------|
|                    |          | P2CA3                           | P2CA2 | P2CA1 |

(1) N/A = Not available or not applicable

(2) X = Don't care

(3) Default after reset (PUC/POR)

(4) Setting the CAPD.x bit disables the output driver and the input Schmitt trigger to prevent parasitic cross currents when applying analog signals. Selecting the CAx input pin to the comparator multiplexer with the P2CAx bits automatically disables the input buffer for that pin, regardless of the state of the associated CAPD.x bit.

(5) In JTAG mode the internal pullup/down resistors are disabled.

(6) Function controlled by JTAG

## Port P2 (P2.6) Pin Schematics, MSP430F20x1

**Table 21. Port P2 (P2.6) Pin Functions, MSP430F20x1**

| PIN NAME (P2.x) | x | FUNCTION              | CONTROL BITS / SIGNALS |         |
|-----------------|---|-----------------------|------------------------|---------|
|                 |   |                       | P2DIR.x                | P2SEL.x |
| P2.6/XIN/TA1    | 6 | P2.6 input/output     | 0/1                    | 0       |
|                 |   | XIN <sup>(1)(2)</sup> | 0                      | 1       |
|                 |   | Timer_A2.TA1          | 1                      | 1       |

(1) Default after reset (PUC/POR)

(2) XIN is used as digital clock input if the bits LFXT1Sx in register BCSTL3 are set to 11.

## Port P2 (P2.7) Pin Schematics, MSP430F20x1

Table 22. Port P2 (P2.7) Pin Functions, MSP430F20x1

| PIN NAME (P2.x) | x | FUNCTION               | CONTROL BITS / SIGNALS |         |
|-----------------|---|------------------------|------------------------|---------|
|                 |   |                        | P2DIR.x                | P2SEL.x |
| P2.7/XOUT       | 7 | P2.7 input/output      | 0/1                    | 0       |
|                 |   | DVSS                   | 0                      | 1       |
|                 |   | XOUT <sup>(1)(2)</sup> | 1                      | 1       |

(1) Default after reset (PUC/POR)

(2) If the pin P2.7/XOUT is used as an input a current can flow until P2SEL.7 is cleared due to the oscillator output driver connection to this pin after reset.

## APPLICATION INFORMATION, MSP430F20X2

### Port P1 (P1.0 to P1.2) Pin Schematics, MSP430F20x2

**Table 23. Port P1 (P1.0 to P1.2) Pin Functions, MSP430F20x2**

|                    |   | Timer_A2.CCI1A                   | 0                                        | 1       | 0         | N/A   |
|                    |   | Timer_A2.TA1                     | 1                                        | 1       | 0         | N/A   |
|                    |   | A2 <sup>(4)</sup>                | X                                        | X       | 1         | 2     |

(1) X = Don't care

(2) N/A = Not available or not applicable

(3) Default after reset (PUC/POR)

(4) Setting the ADC10AE.x bit disables the output driver and the input Schmitt trigger to prevent parasitic cross currents when applying analog signals.

## Port P1 (P1.3) Pin Schematics, MSP430F20x2

**Table 24. Port P1 (P1.3) Pin Functions, MSP430F20x2**

| PIN NAME (P1.x)                    | x | FUNCTION                         | CONTROL BITS / SIGNALS <sup>(1)(2)</sup> |         |           |       |
|------------------------------------|---|----------------------------------|------------------------------------------|---------|-----------|-------|
|                                    |   |                                  | P1DIR.x                                  | P1SEL.x | ADC10AE.x | INCHx |
| P1.3/ADC10CLK/A3/ VREF-<br>/VeREF- | 3 | P1.3 <sup>(3)</sup> input/output | 0/1                                      | 0       | 0         | N/A   |
|                                    |   | N/A                              | 0                                        | 1       | 0         | N/A   |
|                                    |   | ADC10CLK                         | 1                                        | 1       | 0         | N/A   |
|                                    |   | A3 <sup>(4)</sup>                | X                                        | X       | 1         | 3     |
|                                    |   | VREF-/VeREF- <sup>(4)(5)</sup>   | X                                        | X       | 1         | N/A   |

(1) X = Don't care

(2) N/A = Not available or not applicable

(3) Default after reset (PUC/POR)

(4) Setting the ADC10AE.x bit disables the output driver and the input Schmitt trigger to prevent parasitic cross currents when applying analog signals.

(5) An applied voltage is used as negative reference if bit SREF3 in register ADC10CTL0 is set.

## Port P1 (P1.4) Pin Schematic, MSP430F20x2

## Port P1 (P1.5) Pin Schematics, MSP430F20x2

## Port P1 (P1.6) Pin Schematics, MSP430F20x2

The diagram illustrates the internal logic of the P1 I/O module, divided into two main sections: internal logic and pad logic.

**Internal Logic:**

- Inputs:** A7, INCHx = 7, ADC10AE.7, P1REN.7, P1SEL.7, USIPE7, P1DIR.7, USI Module Direction, P1OUT.7, Module X OUT, USI Module Output (I<sup>2</sup>C Mode), P1IN.7, Module X IN, P1IE.7, P1IFG.7, P1SEL.7, P1IES.7, Interrupt Edge Select, To JTAG, From JTAG, From JTAG, From JTAG (TDO).
- Logic Elements:** The internal logic includes several logic gates (AND, OR, NOT, XOR), multiplexers (0/1), and a Bus Keeper block. The Bus Keeper block has an EN input and a Set input. The Interrupt Edge Select block has inputs P1SEL.7 and P1IES.7.
- Outputs:** P1IN.7, Module X IN, P1IRQ.7, P1IE.7, P1IFG.7, P1SEL.7, P1IES.7, Interrupt Edge Select, To JTAG, From JTAG, From JTAG, From JTAG (TDO).

**Pad Logic:**

- Inputs:** A7, INCHx = 7, ADC10AE.7, P1REN.7, P1SEL.7, USIPE7, P1DIR.7, USI Module Direction, P1OUT.7, Module X OUT, USI Module Output (I<sup>2</sup>C Mode), P1IN.7, Module X IN, P1IE.7, P1IFG.7, P1SEL.7, P1IES.7, Interrupt Edge Select, To JTAG, From JTAG, From JTAG, From JTAG (TDO).
- Logic Elements:** The pad logic includes a multiplexer (0/1), a Bus Keeper block, and several logic gates (AND, OR, NOT, XOR). The Bus Keeper block has an EN input and a Set input.
- Outputs:** P1.7/SDI/SDA/A7/TDO/TDI.

(1) X = Don't care

(2) N/A = Not available or not applicable

(3) Default after reset (PUC/POR)

(4) Setting the ADC10AE.x bit disables the output driver and the input Schmitt trigger to prevent parasitic cross currents when applying analog signals.

(5) The reference voltage is output if bit REFOUT in register ADC10CTL0 is set. An applied voltage is used as positive reference if bits SREF0/1 in register ADC10CTL0 are set to 10 or 11.

(6) In JTAG mode the internal pullup/down resistors are disabled.

(7) Function controlled by JTAG.

## Port P2 (P2.6) Pin Schematics, MSP430F20x2

**Table 26. Port P2 (P2.6) Pin Functions, MSP430F20x2**

| PIN NAME (P2.x) | x | FUNCTION              | CONTROL BITS / SIGNALS |         |
|-----------------|---|-----------------------|------------------------|---------|
|                 |   |                       | P2DIR.x                | P2SEL.x |
| P2.6/XIN/TA1    | 6 | P2.6 input/output     | 0/1                    | 0       |
|                 |   | XIN <sup>(1)(2)</sup> | 0                      | 1       |
|                 |   | Timer_A2.TA1          | 1                      | 1       |

(1) Default after reset (PUC/POR)

(2) XIN is used as digital clock input if the bits LFXT1Sx in register BCSTL3 are set to 11.

## Port P2 (P2.7) Pin Schematics, MSP430F20x2

**Table 27. Port P2 (P2.7) Pin Functions, MSP430F20x2**

| PIN NAME (P2.x) | x | FUNCTION               | CONTROL BITS / SIGNALS |         |
|-----------------|---|------------------------|------------------------|---------|
|                 |   |                        | P2DIR.x                | P2SEL.x |
| P2.7/XOUT       | 7 | P2.7 input/output      | 0/1                    | 0       |
|                 |   | DVSS                   | 0                      | 1       |
|                 |   | XOUT <sup>(1)(2)</sup> | 1                      | 1       |

(1) Default after reset (PUC/POR)

(2) If the pin P2.7/XOUT is used as an input a current can flow until P2SEL.7 is cleared due to the oscillator output driver connection to this pin after reset.

|                     |   | A4- <sup>(4)(5)</sup>            | X                                        | X       | 1        | 4     |
| P1.3/VREF/A1-       | 3 | P1.3 <sup>(3)</sup> input/output | 0/1                                      | 0       | 0        | N/A   |
|                     |   | VREF                             | X                                        | 1       | 0        | N/A   |
|                     |   | A1- <sup>(4)(5)</sup>            | X                                        | X       | 1        | 1     |

(1) X = Don't care

(2) N/A = Not available or not applicable

(3) Default after reset (PUC/POR)

(4) Setting the SD16AE.x bit disables the output driver and the input Schmitt trigger to prevent parasitic cross currents when applying analog signals.

(5) With SD16AE.x = 0 the negative inputs are connected to VSS if the corresponding input is selected.

(1) X = Don't care

(2) N/A = Not available or not applicable

(3) Default after reset (PUC/POR)

(4) Setting the SD16AE.x bit disables the output driver and the input Schmitt trigger to prevent parasitic cross currents when applying analog signals.

(5) In JTAG mode, the internal pullup and pulldown resistors are disabled.

(6) With SD16AE.x = 0 the negative inputs are connected to VSS if the corresponding input is selected.

(7) Function controlled by JTAG

## Port P2 (P2.6) Pin Schematics, MSP430F20x3

**Table 30. Port P2 (P2.6) Pin Functions, MSP430F20x3**

| PIN NAME (P2.x) | x | FUNCTION              | CONTROL BITS / SIGNALS |         |
|-----------------|---|-----------------------|------------------------|---------|
|                 |   |                       | P2DIR.x                | P2SEL.x |
| P2.6/XIN/TA1    | 6 | P2.6 input/output     | 0/1                    | 0       |
|                 |   | XIN <sup>(1)(2)</sup> | 0                      | 1       |
|                 |   | Timer_A2.TA1          | 1                      | 1       |

(1) Default after reset (PUC/POR)

(2) XIN is used as digital clock input if the bits LFXT1Sx in register BCSTCL3 are set to 11.

## Port P2 (P2.7) Pin Schematics, MSP430F20x3

**Table 31. Port P2 (P2.7) Pin Functions, MSP430F20x3**

| PIN NAME (P2.x) | x | FUNCTION               | CONTROL BITS / SIGNALS |         |
|-----------------|---|------------------------|------------------------|---------|
|                 |   |                        | P2DIR.x                | P2SEL.x |
| P2.7/XOUT       | 7 | P2.7 input/output      | 0/1                    | 0       |
|                 |   | DVSS                   | 0                      | 1       |
|                 |   | XOUT <sup>(1)(2)</sup> | 1                      | 1       |

(1) Default after reset (PUC/POR)

(2) If the pin P2.7/XOUT is used as an input a current can flow until P2SEL.7 is cleared due to the oscillator output driver connection to this pin after reset.

## REVISION HISTORY

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

**(6) Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## GENERIC PACKAGE VIEW

**RSA 16**

**VQFN - 1 mm max height**

4 x 4, 0.65 mm pitch

PLASTIC QUAD FLATPACK - NO LEAD

This image is a representation of the package family, actual package may vary.  
Refer to the product data sheet for package details.

4230969/A

4219093/A 08/2021

## NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.
4. Reference JEDEC registration MO-220.

# EXAMPLE BOARD LAYOUT

RSA0016B

VQFN - 1 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

LAND PATTERN EXAMPLE  
EXPOSED METAL SHOWN  
SCALE:18X

SOLDER MASK DETAILS

4219093/A 08/2021

NOTES: (continued)

5. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 ([www.ti.com/lit/sluea271](http://www.ti.com/lit/sluea271)).
6. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.

# EXAMPLE STENCIL DESIGN

RSA0016B

VQFN - 1 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

**SOLDER PASTE EXAMPLE**  
 BASED ON 0.125 mm THICK STENCIL

EXPOSED PAD  
 77% PRINTED SOLDER COVERAGE BY AREA  
 SCALE:25X

4219093/A 08/2021

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

## N (R-PDIP-T\*\*)

16 PINS SHOWN

## PLASTIC DUAL-IN-LINE PACKAGE
