

SNx5176B Differential Bus Transceivers

1 Features

- Bidirectional transceivers
- Meets or exceeds the requirements of ANSI standards TIA/EIA-422-B and TIA/EIA-485-A and ITU Recommendations V.11 and X.27
- Designed for multipoint transmission on long bus lines in noisy environments
- 3-state driver and receiver outputs
- Individual driver and receiver enables
- Wide positive and negative input/output bus voltage ranges
- $\pm 60\text{mA}$ maximum driver output capability
- Thermal shutdown protection
- Driver positive and negative current limiting
- $12\text{k}\Omega$ minimum receiver input impedance
- $\pm 200\text{mV}$ receiver input sensitivity
- 50mV typical receiver input hysteresis
- Operates from a single 5V supply

2 Applications

- [Chemical and gas sensors](#)
- Digital signage
- Human machine interfaces (HMI)
- [Motor controls](#)
 - AC induction
 - Brushed and brush-less DC
 - Low- and high-voltage
 - Stepper motors
 - Permanent magnets
- TETRA base stations
- Telecommunication towers
 - Remote electrical tilt (RET) units
 - Tower mounted amplifiers (TMA)
- Weigh scales
- Wireless repeaters

3 Description

The SN65176B and SN75176B differential bus transceivers are designed for bidirectional data communication on multipoint bus transmission lines. The SN65176B and SN75176B are designed for balanced transmission lines and meet ANSI Standards TIA/EIA-422-B and TIA/EIA-485-A and ITU Recommendations V.11 and X.27.

The SN65176B and SN75176B devices combine a 3-state differential line driver and a differential input line receiver, both of which operate from a single 5V power supply. The driver has a active-high enable and the receiver has an active-low enable, that can connect together externally to function as a direction control. The driver differential outputs and the receiver differential inputs are connected internally to form differential input/output (I/O) bus ports that are designed to offer minimum loading to the bus when the driver is disabled or $V_{CC} = 0$. These ports feature wide positive and negative common-mode voltage ranges, making the device appropriate for party-line applications.

The driver is designed for up to 60mA of sink or source current. The driver features positive and negative current limiting and thermal shutdown for protection from line-fault conditions. Thermal shutdown is designed to occur at a junction temperature of approximately 150°C . The receiver features a minimum input impedance of $12\text{k}\Omega$, an input sensitivity of $\pm 200\text{mV}$, and a typical input hysteresis of 50mV .

Package Information

PART NUMBER	PACKAGE (PIN) ⁽¹⁾	PACKAGE SIZE ⁽²⁾
SNx5176	D (SOIC, 8)	$4.90\text{mm} \times 3.91\text{mm}$
	P (PDIP, 8)	$9.81\text{mm} \times 6.35\text{mm}$
	PS (SOP, 8)	$6.20\text{mm} \times 5.30\text{mm}$

(1) For more information, see [Section 10](#).

(2) The package size (length \times width) is a nominal value and includes pins, where applicable.

4 Pin Configuration and Functions

Figure 4-1. Top View

Table 4-1. Pin Functions

PIN		TYPE	DESCRIPTION
NAME	NO.		
R	1	O	Logic data output from RS-485 Receiver
\overline{RE}	2	I	Receive enable (active low)
DE	3	I	Driver enable (active high)
D	4	I	Logic data input to RS-485 driver
GND	5	—	Device ground pin
A	6	I/O	RS-422 or RS-485 data line
B	7	I/O	RS-422 or RS-485 data line
V_{CC}	8	—	Power input, connect to 5V power source

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

	MIN	MAX	UNIT
V _{CC} Supply voltage ⁽²⁾		7	V
Voltage range at any bus terminal	–10	15	V
V _I Enable input voltage		5.5	V
T _J Operating virtual junction temperature		150	°C
T _{stg} Storage temperature range	–65	150	°C
Lead temperature 1.6mm (1/16 inch) from case for 10 seconds		260	°C

- (1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
- (2) All voltage values, except differential input/output bus voltage, are with respect to network ground terminal.

5.2 Recommended Operating Conditions

	MIN	TYP	MAX	UNIT
V _{CC} Supply voltage	4.75	5	5.25	V
V _I or V _{IC} Voltage at any bus terminal (separately or common mode)	–7		12	V
V _{IH} High-level input voltage	D, DE, and RE	2		V
V _{IL} Low-level input voltage	D, DE, and RE		0.8	V
V _{ID} Differential input voltage ⁽¹⁾			±12	V
I _{OH} High-level output current	Driver		–60	mA
	Receiver		–400	µA
I _{OL} Low-level output current	Driver		60	mA
	Receiver		8	mA
T _A Operating free-air temperature	SN65176B	–40	105	°C
	SN75176B	0	70	

- (1) Differential input/output bus voltage is measured at the non-inverting terminal A, with respect to the inverting terminal B.

5.3 Thermal Information

THERMAL METRIC ⁽¹⁾		SNx5176			UNIT
		D (SOIC)	PS (SO)	P (PDIP)	
		8 PINS			
R _{θJA}	Junction-to-ambient thermal resistance	114.4	113.2	88.1	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	55.1	57.9	65.9	°C/W
R _{θJB}	Junction-to-board thermal resistance	61.6	69.0	69.0	°C/W
Ψ _{JT}	Junction-to-top characterization parameter	8.8	14.6	35.2	°C/W
Ψ _{JB}	Junction-to-board characterization parameter	60.8	68.1	64.3	°C/W

- (1) For more information about traditional and new thermal metrics, see the [IC Package Thermal Metrics application note](#).

5.4 Electrical Characteristics – Driver

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS ⁽¹⁾	MIN	TYP ⁽²⁾	MAX	UNIT
V _{IK}	Input clamp voltage	I _I = –18mA			–1.5	V
V _O	Output voltage	I _O = 0	0		V _{CC}	V
V _{OD1}	Differential output voltage	I _O = 0	1.5	3.6	V _{CC}	V
V _{OD2}	Differential output voltage	R _L = 100Ω, see Figure 6-1	½ V _{OD1} or 2 ⁽³⁾			V
		R _L = 54Ω, see Figure 6-1	1.5	2.5	5	
V _{OD3}	Differential output voltage	See ⁽⁴⁾	1.5		5	V
Δ V _{OD}	Change in magnitude of differential output voltage ⁽⁵⁾	R _L = 54Ω or 100Ω, see Figure 6-1			±0.2	V
V _{OC}	Common-mode output voltage	R _L = 54Ω or 100Ω, see Figure 6-1	–1		+3	V
Δ V _{OC}	Change in magnitude of common-mode output voltage ⁽⁵⁾	R _L = 54Ω or 100Ω, see Figure 6-1			±0.2	V
I _O	Output current	Output disabled ⁽⁶⁾	V _O = 12V		1	mA
			V _O = –7V		–0.8	
I _{IH}	High-level input current	V _I = 2.4V			20	μA
I _{IL}	Low-level input current	V _I = 0.4V			–400	μA
I _{OS}	Short-circuit output current		V _O = –7V		–250	mA
			V _O = 0		–150	
			V _O = V _{CC}		250	
			V _O = 12V		250	
I _{CC}	Supply current (total package)	No load	Outputs enabled		42	mA
			Outputs disabled		26	
					35	

- (1) The power-off measurement in ANSI Standard TIA/EIA-422-B applies to disabled outputs only and is not applied to combined inputs and outputs.
- (2) All typical values are at V_{CC} = 5V and T_A = 25°C.
- (3) The minimum V_{OD2} with a 100Ω load is either ½ V_{OD1} or 2V, whichever is greater.
- (4) See ANSI Standard TIA/EIA-485-A, Figure 3.5, Test Termination Measurement 2.
- (5) Δ|V_{OD}| and Δ|V_{OC}| are the changes in magnitude of V_{OD} and V_{OC}, respectively, that occur when the input is changed from a high level to a low level.
- (6) This applies for both power on and off; refer to ANSI Standard TIA/EIA-485-A the for exact conditions. The TIA/EIA-422-B limit does not apply for a combined driver and receiver terminal.

5.5 Electrical Characteristics – Receiver

over recommended ranges of common-mode input voltage, supply voltage, and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
V _{IT+}	Positive-going input threshold voltage	V _O = 2.7V, I _O = –0.4mA			0.2	V
V _{IT–}	Negative-going input threshold voltage	V _O = 0.5V, I _O = 8mA	–0.2 ⁽²⁾			V
V _{hys}	Input hysteresis voltage (V _{IT+} – V _{IT–})			50		mV
V _{IK}	Enable Input clamp voltage	I _I = –18mA			–1.5	V
V _{OH}	High-level output voltage	V _{ID} = 200mV, I _{OH} = –400μA, see Figure 6-2	2.7			V
V _{OL}	Low-level output voltage	V _{ID} = –200mV, I _{OL} = 8mA, see Figure 6-2			0.45	V
I _{OZ}	High-impedance-state output current	V _O = 0.4V to 2.4V			±20	μA
I _I	Line input current	Other input = 0V ⁽³⁾		V _I = 12V	1	mA
				V _I = –7V	–0.8	
I _{IH}	High-level enable input current	V _{IH} = 2.7V			20	μA
I _{IL}	Low-level enable input current	V _{IL} = 0.4V			–100	μA
r _I	Input resistance	V _I = 12V	12			kΩ
I _{OS}	Short-circuit output current		–15		–85	mA
I _{CC}	Supply current (total package)	No load		Outputs enabled	42	mA
				Outputs disabled	26	

(1) All typical values are at V_{CC} = 5V, T_A = 25°C.

(2) The algebraic convention, in which the less positive (more negative) limit is designated minimum, is used in this data sheet for common-mode input voltage and threshold voltage levels only.

(3) This applies for both power on and power off. Refer to EIA Standard TIA/EIA-485-A for exact conditions.

5.6 Switching Characteristics – Driver

V_{CC} = 5V, R_L = 110Ω, T_A = 25°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t _{d(OD)}	Differential-output delay time	R _L = 54Ω, see Figure 6-3		15	22	ns
t _{t(OD)}	Differential-output transition time	R _L = 54Ω, see Figure 6-3		20	30	ns
t _{PZH}	Output enable time to high level	See Figure 6-4		85	120	ns
t _{PZL}	Output enable time to low level	See Figure 6-5		40	60	ns
t _{PHZ}	Output disable time from high level	See Figure 6-4		150	250	ns
t _{PLZ}	Output disable time from low level	See Figure 6-5		20	30	ns

5.7 Switching Characteristics – Receiver

V_{CC} = 5V, C_L = 15pF, T_A = 25°C

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t _{PLH}	Propagation delay time, low- to high-level output	V _{ID} = 0 to 3V, see Figure 6-6		21	35	ns
t _{PHL}	Propagation delay time, high- to low-level output			23	35	
t _{PZH}	Output enable time to high level	See Figure 6-7		10	20	ns
t _{PZL}	Output enable time to low level			12	20	
t _{PHZ}	Output disable time from high level	See Figure 6-7		20	35	ns
t _{PLZ}	Output disable time from low level			17	25

6 Detailed Description

6.1 Overview

The SN65176B and SN75176B differential bus transceivers are integrated circuits designed for bidirectional data communication on multipoint bus transmission lines. They are designed for balanced transmission lines and meet ANSI Standards TIA/EIA-422-B and TIA/EIA-485-A and ITU Recommendations V.11 and X.27.

The SN65176B and SN75176B devices combine a 3-state differential line driver and a differential input line receiver, both of which operate from a single 5-V power supply. The driver and receiver have active-high and active-low enables, respectively, that can be connected together externally to function as a direction control. The driver differential outputs and the receiver differential inputs are connected internally to form differential input/output (I/O) bus ports that are designed to offer minimum loading to the bus when the driver is disabled or $V_{CC} = 0$. These ports feature wide positive and negative common-mode voltage ranges, making the device suitable for party-line applications.

The driver is designed for up to 60 mA of sink or source current. The driver features positive and negative current limiting and thermal shutdown for protection from line-fault conditions. Thermal shutdown is designed to occur at a junction temperature of approximately 150°C. The receiver features a minimum input impedance of 12 k Ω , an input sensitivity of ± 200 mV, and a typical input hysteresis of 50 mV.

The SN65176B and SN75176B devices can be used in transmission-line applications employing the SN75172 and SN75174 quadruple differential line drivers and SN75173 and SN75175 quadruple differential line receivers.

6.2 Functional Block Diagram

6.3 Feature Description

6.3.1 Driver

The driver converts a TTL logic signal level to RS-422 and RS-485 compliant differential output. Use the TTL logic input, the DE pin, to turn the driver on and off.

Table 6-1. Driver Function ⁽¹⁾

INPUT D	ENABLE DE	DIFFERENTIAL OUTPUTS	
		A	B
H	H	H	L
L	H	L	H
X	L	Z	Z

(1) H = high level, L = low level, X = irrelevant, Z = high impedance (off)

6.3.2 Receiver

The receiver converts a RS-422 or RS-485 differential input voltage to a TTL logic level output. Use the TTL logic input, the \overline{RE} pin, to turn the receiver logic output on and off.

Table 6-2. Receiver Function Table ⁽¹⁾

DIFFERENTIAL INPUTS A–B	ENABLE \overline{RE}	OUTPUT R
$V_{ID} \geq 0.2V$	L	H
$-0.2V < V_{ID} < 0.2V$	L	U
$V_{ID} \leq -0.2V$	L	L
X	H	Z
Open	L	U

(1) H = high level, L = low level, U = unknown, Z = high impedance (off)

6.4 Device Functional Modes

6.4.1 Device Powered

Both the driver and receiver can be individually enabled or disabled in any combination. DE and \overline{RE} can be connected together for a single port direction control bit.

6.4.2 Device Unpowered

The driver differential outputs and the receiver differential inputs are connected internally to form differential input/output (I/O) bus ports. The bus ports are designed to offer minimum loading to the bus when the driver is disabled or $V_{CC} = 0$.

6.4.3 Symbol Cross Reference

7 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

7.1 Application Information

Use SN65176B and SN75176B in RS-485 and RS-422 physical layer communications.

7.2 Typical Application

Terminate the line at both ends in its characteristic impedance ($R_T = Z_0$). Keep the stub lengths off of the main line as short as possible.

Figure 7-1. Typical RS-485 Application Circuit

7.2.1 Design Requirements

- 5V power source
- RS-485 bus operating at 10Mbps or less
- Connector that establishes the correct polarity for port pins
- External fail safe implementation

7.2.2 Detailed Design Procedure

Place the device close to bus connector to keep traces (stub) short to prevent adding reflections to the bus line. If desired, add external fail-safe biasing to establish +200mV on the A-B port.

7.2.3 Application Curves

Figure 7-2. Eye Diagram for 10Mbps/s Over 100 feet of Standard CAT-5E Cable 120Ω Termination at Both Ends

In [Figure 7-2](#), the scale is 1V per division and 25ns per division.

7.3 System Examples

Figure 7-3. Schematics of Inputs and Outputs

7.4 Power Supply Recommendations

Establish a power supply of 5V with a tolerance less than 10%.

7.5 Layout

7.5.1 Layout Guidelines

Traces from device pins A and B to connector must be short and capable of 250 mA maximum current.

7.5.2 Layout Example

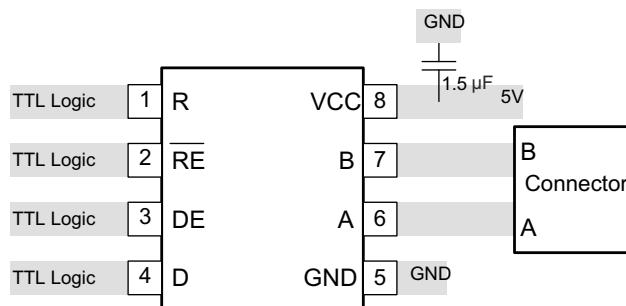

Figure 7-4. Layout Diagram

8 Device and Documentation Support

8.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](https://www.ti.com). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

8.2 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

8.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

8.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

8.5 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

9 Revision History

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PACKAGE OUTLINE

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:8X

SOLDER MASK DETAILS

4214825/C 02/2019

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

SOLDER PASTE EXAMPLE
BASED ON .005 INCH [0.125 MM] THICK STENCIL
SCALE:8X

4214825/C 02/2019

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

MECHANICAL DATA

PS (R-PDSO-G8)

PLASTIC SMALL-OUTLINE PACKAGE

4040063/C 03/03

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15.

P (R-PDIP-T8)

PLASTIC DUAL-IN-LINE PACKAGE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - C. Falls within JEDEC MS-001 variation BA.

IMPORTANT NOTICE AND DISCLAIMER
