

TPD4S009 4-Channel ESD Solution for High-Speed Differential Interface

1 Features

- IEC 61000-4-2 Level 4 ESD Protection
 - ± 8 -kV Contact Discharge
- IEC 61000-4-5 Surge Protection
 - 2.5A (8/20 μ s)
- I/O Capacitance: 0.8 pF (Typical)
- Low Leakage Current: 10 nA (Typical)
- Supports High-Speed Differential Data Rates (3-dB Bandwidth > 4 GHz)
- Ultra-low Matching Capacitance Between Differential Signal Pairs
- I_{off} Feature for the TPD4S009
- Industrial Temperature Range: –40°C to 85°C
- Easy Straight through Routing, Space-Saving Package Options

2 Applications

- End Equipment
 - Set-Top Boxes
 - DTVs
 - Laptop/Desktop
 - Electronic Point of Sale (EPOS)
- Interfaces
 - USB 2.0
 - HDMI 1.4
 - LVDS
 - SATA
 - Ethernet
 - FireWire

3 Description

The TPD4S009 and TPD4S010 are four-channel TVS diode arrays for electrostatic discharge (ESD) protection. TPD4S009 and TPD4S010 are rated to dissipate contact ESD strikes at the maximum level specified in the IEC 61000-4-2 international standard (Level 4), with ± 8 -kV contact discharge ESD protection. The low capacitance (0.8-pF) of these devices, coupled with the excellent matching between differential signal pairs (0.05-pF line-line capacitance for the TPD4S009DRY) enables this device to provide transient voltage suppression circuit protection for high-speed differential data rates (3-dB bandwidth > 4 GHz).

The TPD4S009 is offered in DBV, DCK, DGS, and DRY packages. The TPD4S009DRYR is the most space saving package option available for dual pair high-speed differential lines. The TPD4S010 is offered in the industry standard DQA package. The TPD4S009DGSR and TPD4S010DQAR offer flow-through board layout options to reduce signal glitches normally caused by routing mismatches between the D+ and D- signal pair. See also [TPD4E05U06DQAR](#) which is P2P compatible with TPD4S010DQAR. This device offers higher IEC ESD protection, lower capacitance, lower R_{DYN} , lower DC breakdown voltage, and lower clamping voltage.

7 Detailed Description

7.1 Overview

The TPD4S009 and TPD4S010 are four-channel TVS diode arrays for electrostatic discharge (ESD) protection. TPD4S009 and TPD4S010 are rated to dissipate contact ESD strikes at the maximum level specified in the IEC 61000-4-2 international standard (Level 4), with ± 8 -kV contact discharge ESD protection. The low 0.8 pF capacitance of these devices, coupled with the excellent matching between differential signal pairs (0.05-pF line-line capacitance for the TPD4S009DRY) enables this device to operate at high-speed differential data rates (3-dB bandwidth > 4 GHz).

The TPD4S009 offers an optional V_{CC} supply pin which can be connected to system supply plane. There is a blocking diode at the V_{CC} pin to enable the Ioff feature for the TPD4S009. The TPD4S009 can handle live signal at the D+, D- pins when the V_{CC} pin is connected to zero volt. The V_{CC} pin allows all the internal circuit nodes of the TPD4S009 to be at known potential during start up time. However, connecting the optional V_{CC} pin to board supply plane doesn't affect the system level ESD performance of the TPD4S009. The TPD4S010 does not offer the V_{CC} pin.

7.2 Functional Block Diagram

Figure 6. TPD4S009

Figure 7. TPD4S010

7.3 Feature Description

7.3.1 ± 8 -kV IEC61000-4-2 Level 4 Contact ESD Protection

The I/O pins can withstand ESD events up to ± 8 -kV contact and ± 9 -kV air. An ESD/surge clamp diverts the current to ground.

7.3.2 IEC61000-4-5 Surge Protection

The I/O pins can withstand surge events up to 2.5 A and 25 W (8/20 μ s waveform). An ESD/surge clamp diverts this current to ground.

7.3.3 I/O Capacitance

The capacitance between each I/O pin to ground is 0.8 pF (typical) for both TPD4S009 and TPD4S010. These devices support data rates up to 3.4 Gbps.

7.3.4 Low Leakage Current

The I/O pins feature a low leakage current of 10 nA (typical) with an IO bias of 3.3 V and V_{CC} bias of 5V.

7.3.5 Supports High-Speed Differential Data Rates

The I/O pins low capacitance of 0.8 pF (typical) gives them a typical -3 dB bandwidth > 4 GHz. This allows TPD4S009 and TPD4S010 to protect interfaces with high speed signals like HDMI 1.4.

7.3.6 Ultra-low Matching Capacitance Between Differential Signal Pairs

The monolithic silicon technology allows matching between the differential signal pairs. The excellent matching between the differential pair signal lines (0.05-pF line-line capacitance for the TPD4S009DRY) enables this device to operate at high-speed differential data rates (3-dB bandwidth > 4 GHz). Excellent matching capacitance between differential signal pairs is also crucial to minimize the inter-pair and intra-pair skew between differential signals, which is crucial for many high-speed signal interfaces like HDMI 1.4.

7.3.7 I_{off} Feature for the TPD4S009

The TPD4S009 offers an optional V_{CC} supply pin which can be connected to system supply plane. There is a blocking diode at the V_{CC} pin which makes it so the TPD4S009 can handle live signal at the D+, D- pins when the V_{CC} pin is connected to zero volt. This is the I_{off} feature, which is crucial for HDMI, as a live signal can be put on the IO pins when the system is powered off. The TPD4S010 does not offer the V_{CC} pin.

7.3.8 Industrial Temperature Range

This device features an industrial operating range of -40°C to 85°C .

7.3.9 Easy Flow-Through Routing

The layout of this device makes it simple and easy to add protection to an existing layout. The packages offers flow-through routing, requiring minimal modification to an existing layout. Flow-through routing also allows the PCB designer to optimize the signal integrity of any high-speed signals being protected.

7.4 Device Functional Modes

TPD4S009 and TPD4S010 are passive integrated circuits that trigger when voltages are above V_{BR} or below the lower diodes V_f (-0.6 V). During ESD events, voltages as high as ± 8 kV (contact) can be directed to ground via the internal diode network. Once the voltages on the protected line fall below the trigger levels of TPD4S009 or TPD4S010 (usually within 10's of nano-seconds) the device reverts back to its high-impedance state.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

TPD4S009 and TPD4S010 are four-channel TVS diode arrays which are used to provide IEC 61000-4-2 system level ESD protection for a human interface connector. TPD4S009 and TPD4S010 provide a path to ground for dissipating ESD events on hi-speed signal lines between the human interface connector and the system. As the current from ESD passes through the TVS, only a small voltage drop is present across the diode. This is the voltage presented to the protected IC. The low R_{DYN} of the triggered TVS holds this voltage, V_{CLAMP} , to a safe level for the protected IC.

8.2 Typical Application

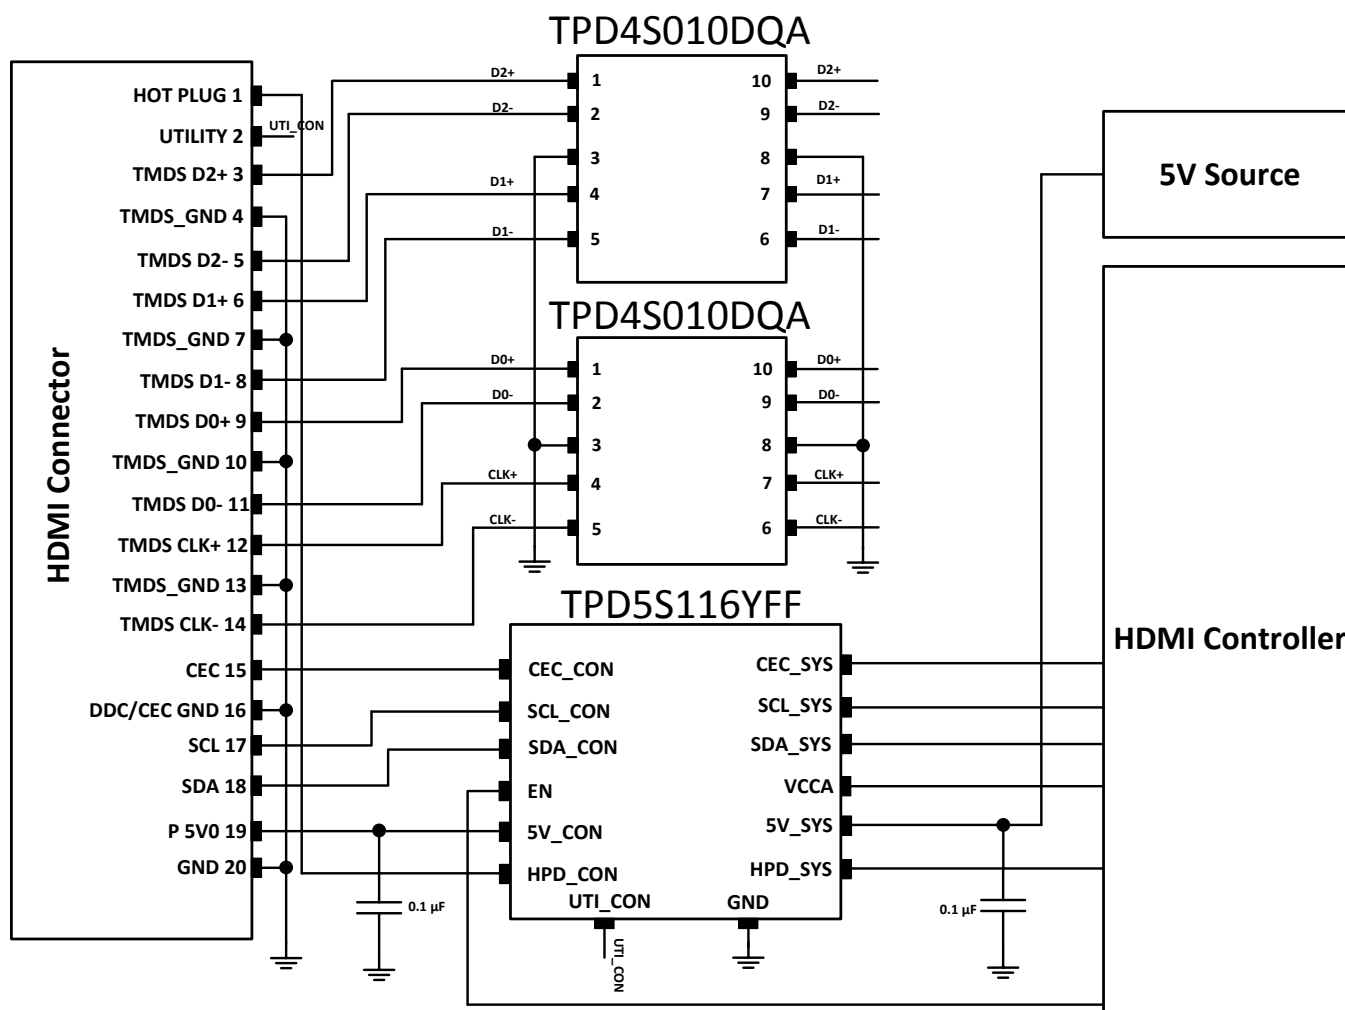

Figure 8. Typical Application Schematic

Typical Application (continued)

8.2.1 Design Requirements

For this design example, two TPD4S010 devices, and one TPD5S116 are being used in an HDMI 1.4 application. This will provide a complete port protection scheme.

Given the HDMI 1.4 application, the following parameters are known.

DESIGN PARAMETER	VALUE
Signal range on Pins 1, 2, 4, or 5	0 V to 3.6 V
Operating Frequency	1.7 GHz

8.2.2 Detailed Design Procedure

To begin the design process, some parameters must be decided upon; the designer needs to know the following:

- Signal range on all the protected lines
- Operating frequency

8.2.2.1 Signal Range on Pin 1, 2, 4, or 5

TPD4S010 has 4 identical protection channels for signal lines. The symmetry of the device provides flexibility when selecting which of the 4 I/O channels will protect which signal lines. Any I/O will support a signal range of 0 to 5.5 V. Therefore, this device will support the HDMI 1.4 signal swing.

8.2.2.2 Bandwidth on Pin 1, 2, 4, or 5

Each pin of the TPD4S010 has a typical –3 dB bandwidth of 4GHz. Therefore, this device can handle HDMI 1.4 data rate of 3.4 Gbps with operating frequency of 1.7 GHz.

8.2.3 Application Curves

Figure 9 and Figure 10 are HDMI eye diagram measurements for the TPD4S009. The same eye diagram performance is expected for the TPD4S010.

9 Power Supply Recommendations

TPD4S009 and TPD4S010 are passive TVS diodes and so there is no requirement to power them. They are fully functional without any power supply. However, TPD4S009 does provide an option to apply a DC voltage to its V_{CC} pin, whose purpose is to bias the internal central clamp and insure a known voltage on all internal nodes during startup time. This feature is optional, and whether or not a DC voltage is applied to V_{CC} does not affect the ESD performance of this device.

10 Layout

10.1 Layout Guidelines

- The optimum placement is as close to the connector as possible.
 - EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures.
 - The PCB designer needs to minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.
- Route the protected traces as straight as possible.
- Eliminate any sharp corners on the protected traces between the TVS and the connector by using rounded corners with the largest radii possible.
 - Electric fields tend to build up on corners, increasing EMI coupling.

10.2 Layout Example

This is a layout example for TPD4S010 being used to protect HDMI TMDS Lines.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.

GENERIC PACKAGE VIEW

DRY 6

USON - 0.6 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

Images above are just a representation of the package family, actual package may vary.
Refer to the product data sheet for package details.

4207181/G

USON - 0.6 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

4222894/A 01/2018

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

2. This drawing is subject to change without notice.

4. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

DBV0006A**PACKAGE OUTLINE****SOT-23 - 1.45 mm max height**

SMALL OUTLINE TRANSISTOR

4214840/G 08/2024

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.25 per side.
4. Leads 1,2,3 may be wider than leads 4,5,6 for package orientation.
5. Reference JEDEC MO-178.

EXAMPLE BOARD LAYOUT
