SLLS907E -AUGUST 2008-REVISED AUGUST 2014

TPDxF003 Four-, Six-, and Eight-Channel EMI Filters With Integrated ESD Protection

Features

- Four-, Six-, and Eight-Channel EMI Filtering for Data Ports
- -3 dB Bandwidth of 200 MHz
- Greater than 25 dB attenuation at 1 GHz
- IEC 61000-4-2 Level 4 ESD Protection
 - ±12-kV Contact Discharge
 - ±20-kV Air Gap Discharge
- Pi-Style (C-R-C) Filter Configuration $(R = 100 \Omega, C_{TOTAL} = 17 pF)$
- Low 10-nA Leakage Current
- Easy Flow-Through Routing

Applications

- Display Interfaces
- Cell Phones
- **Tablets**
- **SVGA Video Connections**
- Memory Interfaces

3 Description

The TPDxF003 family is a series of highly integrated designed to provide Electromagnetic Interference (EMI) filtering in all systems subjected to electromagnetic interference. These filters also provide a Transient Voltage Suppressor (TVS) diode circuit for Electrostatic Discharge (ESD) protection which prevents damage to the application when subjected to ESD stress far exceeding IEC 61000-4-2 (Level 4).

The TPDxF003 family is specified for -40°C to 85°C operation. These filters are also packaged in spacesaving 0.4-mm pitch DQD packages.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPD4F003	WSON (8)	1.70 mm x 1.35 mm
TPD6F003	WSON (12)	2.50 mm x 1.35 mm
TPD8F003	WSON (16)	3.30 mm x 1.35 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

6 Specifications

6.1 Absolute Maximum Ratings⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_{IO}	IO to GND		6	V
TJ	Junction temperature		150	°C

⁽¹⁾ Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rated conditions for extended periods may affect device reliability.

6.2 Handling Ratings

			MIN	MAX	UNIT
T _{stg}	Storage temperature rang	ge	-65	150	°C
		Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾		±15	kV
V _(ESD)	Electrostatic discharge	Charged device model (CDM), per JEDEC specification JESD22-C101, all pins (2)		±1500	V
		IEC 61000-4-2 ESD Rating - Contact		±12	kV
		IEC 61000-4-2 ESD Rating - Air		±20	ĸ٧

⁽¹⁾ JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

	MIN	MAX	UNIT
V _{IO}	0	5.5	V
T _A	-40	85	°C

6.4 Thermal Information

		TPD4F003	TPD6F003	TPD8F003		
	THERMAL METRIC ⁽¹⁾		DQD			
		8 PINS	12 PINS	16 PINS		
$R_{\theta JA}$	Junction-to-ambient thermal resistance	115.6	89.2	80.8		
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	108.5	100.1	88.3		
$R_{\theta JB}$	Junction-to-board thermal resistance	66.4	50.5	45.8	°C/W	
ΨЈТ	Junction-to-top characterization parameter	6.8	9.4	9.2	C/VV	
ΨЈВ	Junction-to-board characterization parameter	65.9	50.0	45.4		
R _{0JC(bot)}	Junction-to-case (bottom) thermal resistance	33.2	31.0	31.8		

⁽¹⁾ For more information about traditional and new thermal metrics, see the IC Package Thermal Metrics application report, SPRA953.

6.5 Electrical Characteristics

 $T_A = -40$ °C to 85°C (unless otherwise noted)

· A -	40 O to 00 O (unicos otriciwise notea)					
	PARAMETER	TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
V_{BR}	DC breakdown voltage	I _{IO} = 10 μA	6			V
R	Resistance		85	100	115	Ω
С	Capacitance (C1 or C2)	V _{IO} = 2.5 V		8.5		pF
I _{IO}	Channel leakage current	V _{IO} = 3.3 V		10		nA
$f_{\mathbb{C}}$	Cut-off frequency	$Z_{SOURCE} = 50 \Omega, Z_{LOAD} = 50 \Omega$		200		MHz

(1) Typical values are at $T_A = 25$ °C.

6.6.2 Channel-to-Channel Crosstalk

7 Detailed Description

7.1 Overview

The TPDxF003 family is a series of highly integrated devices designed to provide EMI filtering in all systems subjected to electromagnetic interference. These filters also provide a Transient Voltage Suppressor (TVS) diode circuit for ESD protection which prevents damage to the application when subjected to ESD stress far exceeding IEC 61000-4-2 (Level 4).

7.2 Functional Block Diagram

7.3 Feature Description

The TPDxF003 family is a line of ESD and EMI filtering devices designed to reduce EMI emissions and provide system level ESD protection. Each device can dissipate ESD strikes above the maximum level specified by IEC 61000-4-2 international standard. Additionally, the EMI filtering structure reduces EMI emissions by providing high frequency roll-off.

7.3.1 Four-, Six-, and Eight-Channel EMI Filtering for Data Ports

These devices provide EMI filtering for four, six, or eight channels of data lines.

7.3.2 -3 dB Bandwidth of 200 MHz

These devices have a through -3dB bandwidth of 200 MHz.

7.3.3 Greater Than 25 dB Attenuation at 1 GHz

Signal attenuation is above 25dB at 1 GHz, which provides significant reduction in spurious emissions.

7.3.4 Robust ESD Protection Exceeds IEC 61000-4-2

The ESD protection on all pins exceeds the IEC 61000-4-2 level 4 standard. Contact ESD is rated at ±12 kV and Air-gap ESD is rated at ±20 kV.

7.3.5 Pi-Style (C-R-C) Filter Configuration

This family of devices has a pi-style filtering configuration composed of a series resistor and two capacitors in parallel with the I/O pins. The typical resistor value is 100 Ω and the typical capacitor values are 8.5 pF each.

7.3.6 Low 10-nA Leakage Current

The I/O pins feature an ultra-low leakage current of 10-nA (typical) with a bias of 3.3 V.

7.3.7 Easy Flow-Through Routing

The layout of this device makes it easy to add protection to existing layouts. The packages offer flow-through routing which requires minimal changes to existing layout for addition of these devices.

Submit Documentation Feedback

7.4 Device Functional Modes

The TPDxF003 family of devices are passive integrated circuits that passively filter EMI and trigger when voltages are above V_{BR} or below the lower diode voltage (-0.6 V). During ESD events, voltages as high as ± 20 kV (air) can be directed to ground via the internal diode network. Once the voltages on the protected line fall below the trigger levels, the device reverts to passive.

8 Applications and Implementation

8.1 Application Information

The TPDxF003 family are diode type TVS' integrated with series resistors for filtering emitted EMI. As signal passes through the device, higher frequency components are filtered out. This device also provides a path to ground during ESD events and isolates the protected IC. As the current from ESD passes through the TVS, only a small voltage drop is present across the diode. This is the voltage presented to the protected IC. In particular, these filters are ideal for EMI filtering and protecting data lines from ESD at the display, keypad, and memory interfaces.

8.2 Typical Application

Figure 10. Display Panel Schematic

Typical Application (continued)

8.2.1 Design Requirements

For this design example, three TPD6F003 devices are used in an 18-bit display panel application. This will provide a complete ESD and EMI protection solution for the display connector.

Given the display panel application, the following parameters are known.

DESIGN PARAMETER	VALUE
Signal range on all pins except GND	0 V to 5 V
Operating Frequency	100 MHz

8.2.2 Detailed Design Procedure

To begin the design process, some design parameters must be decided; the designer need to know the following:

- Signal range on all the protected lines
- Operating frequency

8.2.2.1 Signal Range on All Protected Lines

The TPD6F003 has 8 identical protection channels for signal lines. All I/O pins will support a signal range from 0 to 5.5 V.

8.2.2.2 Operating Frequency

The TPD6F003 has a 200 MHz –3dB bandwidth, which supports the operating frequency for this display.

8.2.3 Application Curve

Figure 11. Frequency Response

0 Submit Documentation Feedback

9 Power Supply Recommendations

This family of devices are passive EMI and ESD devices so there is no need to power them. Care should be taken to not violate the recommended V_{IO} specification (5.5 V) to ensure the device functions properly.

10 Layout

10.1 Layout Guidelines

- The optimum placement is as close to the connector as possible.
 - EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures.
 - The PCB designer needs to minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.
- · Route the protected traces as straight as possible.
- Eliminate any sharp corners on the protected traces between the TVS and the connector by using rounded corners with the largest radii possible.
 - Electric fields tend to build up on corners, increasing EMI coupling.

10.2 Layout Example

This application is typical of an 18-bit RGB display panel layout.

11.2 Trademarks

All trademarks are the property of their respective owners.

11.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

⁽¹⁾ Status: For more details on status, see our product life cycle.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

⁽²⁾ Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

⁽⁴⁾ Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No—Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you fully indemnify TI and its representatives against any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to TI's Terms of Sale, TI's General Quality Guidelines, or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products. Unless TI explicitly designates a product as custom or customer-specified, TI products are standard, catalog, general purpose devices.

TI objects to and rejects any additional or different terms you may propose.
