

TPS92544-Q1 65V Automotive Synchronous Boost Controller, and 2A Synchronous CC/CV Buck Converter, and Trapezoidal Motion Profile Control of Stepper Motor

1 Features

- AEC-Q100 qualified for automotive applications
 - Grade 1: -40°C to 125°C ambient operating temperature
 - Device HBM classification level H1C
 - Device CDM classification level C5
- Functional Safety-Capable**
 - Documentation available to aid functional safety system design
- 4.5V to 65V wide input voltage range
- Synchronous Buck with integrated switches
- Configurable Constant Voltage (CV) and Constant Current (CC) operation
 - Up to 2A continuous output current with 4% accuracy
 - 4% regulation accuracy (voltage and current mode)
- Synchronous BOOST controller
 - Programmable output voltage up to 65V
- BOOST and BUCK spread-spectrum for EMI mitigation
- BUCK switch thermal protection
- UART serial communication
 - Internal oscillator for system clock
 - LMM compatible
- Internal EEPROM
 - Default settings
 - Customer calibration data

2 Applications

- Automotive headlight and adaptive LED driving module**

3 Description

The TPS92544-Q1 device contains a synchronous BOOST controller and a monolithic synchronous buck LED driver with a wide 4.5V to 65V operating BUCK input voltage range.

The synchronous BOOST controller implements a peak current-mode controller to operate in constant voltage mode. The output voltage can be programmed using a programmable 8-bit DAC.

The monolithic synchronous BUCK implements an adaptive on-time average current mode control and is designed to generate constant voltage (CV) or constant current (CC) output. In the CC mode, the BUCK is compatible with shunt FET dimming

techniques and LED matrix manager-based dynamic beam headlamps. In CV mode, the adaptive on-time control enables high bandwidth operation with fast transient response. The adaptive on-time control provides near constant switching frequency that can be set between 100kHz and 1.0MHz. Inductor current sensing and closed-loop feedback enable better than $\pm 4\%$ accuracy over wide input voltage, output voltage and ambient temperature range. In CC mode, the BUCK can independently modulate LED current using both analog or PWM dimming techniques.

The TPS92544-Q1 incorporates features to implement a trapezoidal motion profile allowing for a simple operation of the stepper motor functionality.

The TPS92544-Q1 includes an internal oscillator. The UART serial interface is compatible with TPS9266x, and TPS9254x devices. The internal EEPROM can store system defaults as well as calibration and lighting module data. The seven configurable MPIOs and DIOs can be set as digital inputs or outputs, or ADC inputs for applications with system temperature compensation, LED binning and coding, etc.

The TPS92544-Q1 is available in a 7.0mm $\times$ 7.0mm thermally-enhanced 48-pin HTQFP package.

Device Information

PART NUMBER ⁽¹⁾	PACKAGE	PACKAGE SIZE (NOM) ⁽²⁾
TPS92544-Q1	PKD, PHP (HTQFP, 48)	7.0mm $\times$ 7.0mm

- For all available packages, see the orderable addendum at the end of the data sheet.
- The package size (length $\times$ width) is a nominal value and includes pins, where applicable

Figure 4-2. PHP Package 48-Pin HTQFP (Bottom-Exposed PAD) Top View

Table 4-1. Pin Functions

NAME	PIN		I/O	DESCRIPTION
	NO.	PKD/PHP		
BOOTBCK	19		P	Supply input for BUCK high-side MOSFET gate drive circuit. Connect a ceramic capacitor between BOOTBCK and SWBCK pins. An internal diode is connected between VDD and BOOTBCK.
BOOTBST	33		P	Supply input for BOOST high-side MOSFET gate drive circuit. Connect a ceramic capacitor between BOOTBST and SWBST pins. An internal diode is connected between VDD and BOOTBST.
CMPBCK	25		I/O	Output of BUCK internal transconductance error amplifier. Connect an integral compensation network to ensure stability.
CMPBST	41		I/O	Output of BOOST internal transconductance error amplifier. Connect a proportional-integral compensation network to ensure stability.
CSN	24		I	Negative input (–) of internal rail-to-rail transconductance error amplifier. Connect directly to the negative node of the LED current sense resistor, R_{CS} .
CSP	23		I	Positive input (+) of internal rail-to-rail transconductance error amplifier. Connect directly to the positive node of the LED current sense resistor, R_{CS} .
DIO0	6		I/O	Digital IO. The pin can be configured as digital input, or digital output.
DIO1	8		I/O	
EN	45		I	Hardware enable. Pull this pin low to enter shutdown.
GND	43		G	Signal and analog ground. Return for the internal voltage reference and analog circuits. Connect to circuit ground to complete return path.
GNDA	40			
HGBST	31		I/O	BOOST high side gate driver output.
ISN	37		O	Negative input (–) of BOOST current sense amplifier. Connect directly to the current sense resistor, R_{IS} .
ISP	38		I	Positive input (+) of BOOST current sense amplifier. Connect directly to the current sense resistor, R_{IS} .

Table 4-1. Pin Functions (continued)

PIN		I/O	DESCRIPTION
NAME	NO.		
	PKD/PHP		
LGBST	36	I/O	BOOST low side gate driver output.
MPIO0	48	I/O	Multi-purpose IO. The pin can be configured as an ADC input, digital input, or digital output. MPIO0 is used to enter CTM.
MPIO1	1	I/O	Multi-purpose IO. The pin can be configured as an ADC input, digital input, or digital output.
MPIO2	2	I/O	
MPIO3	3	I/O	
MPIO4	4	I/O	
NC1, NC2, NC3, NC4, NC5, NC6, NC7, NC8, NC9, NC10, NC11, NC12, NC13, NC14, NC15, NC16, NC17	5, 7, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 22, 27, 30, 34, 39	NC	Do not connect. Can be connected to ground.
PGNDBCK	26	G	Ground return for BUCK low-side MOSFET
PGNDBST	35	G	Ground return for BOOST high-side gate driver
RX	47	I	UART receive data input. Connect to RX of CAN transceiver.
SWBCK	20, 21	P	Switching output of the BUCK regulator. Internally connected to both power MOSFETs. Connect to the power inductor.
SWBST	32	P	Switch node of the BOOST controller.
TX	46	O	UART transmit data output. Connect to TX of CAN transceiver.
VBCK	29	P	Power inputs and connections to BUCK high-side MOSFET drain node. Connect to the BOOST output voltage and bypass capacitors C_{IN} . The path from the VBCK pin to high frequency bypass C_{IN} and PGND must be as short as possible.
VBCKA	28	P	Power to internal analog block of BUCK regulator. Connect to VBCK pin and high frequency bypass capacitor.
VDD	44	P	Digital input supply voltage. Locally decouple to GND using a 2.2 μ F to 4.7 μ F ceramic capacitor located close to the device.
VDDA	42	P	Analog input supply voltage. Locally decouple to GND using a 100nF to 1 μ F ceramic capacitor located close to the device.

6 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

6.1 Package Option Addendum

Packaging Information

Orderable Device	Status ⁽¹⁾	Package Type	Package Drawing	Pins	Package Qty	Eco Plan ⁽²⁾	Lead/Ball Finish ⁽⁴⁾	MSL Peak Temp ⁽³⁾	Op Temp (°C)	Device Marking ^{(5) (6)}
TPS92544QPKDRQ1	ACTIVE	HTQFP	PKD	48	1000	Green (RoHS and no Sb/Br)	NIPDAU	Level-3-260C-168 HR	-40 to 125	TPS92544
TPS92544QPHPRQ1	ACTIVE	HTQFP	PHP	48	1000	Green (RoHS and no Sb/Br)	NIPDAU	Level-3-260C-168 HR	-40 to 125	TPS92544Q

- (1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PRE_PROD Unannounced device, not in production, not available for mass market, nor on the web, samples not available.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.
- (2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)
- (3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.
- (5) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device
- (6) Multiple Device markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.
 In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
