

# TS3USB31E High-Speed USB 2.0 (480-Mbps) 1-Port Switch with Single Enable and ESD Protection

## 1 Features

- $V_{CC}$  Operation 2.25 V to 4.3 V
- 1.8-V Compatible Control-Pin Inputs
- $I_{OFF}$  Supports Partial Power-Down Mode Operation
- $r_{on} = 10\ \Omega$  Maximum
- $\Delta r_{on} < 0.35\ \Omega$  Typical
- $C_{io(ON)} = 6\ \text{pF}$  Typical
- Low Power Consumption (1  $\mu\text{A}$  Maximum)
- ESD Performance Tested Per JESD 22
  - 8000-V Human-Body Model (A114-B, Class II)
  - 1000-V Charged-Device Model (C101)
  - 250-V Machine Model (A115-A)
- ESD Performance COM Port to GND
  - 15000-V Human-Body Model (A114-B, Class II)
- Wide  $-3\text{-dB}$  Bandwidth = 1100 MHz Typical
- Packaged in 8-Pin TQFN (1.5 mm  $\times$  1.5 mm)

## 2 Applications

- Routes Signals for USB 1.0, 1.1, and 2.0

## 3 Description

The TS3USB31E is a high-bandwidth switch specially designed for the switching of high-speed USB 2.0 signals in handset and consumer applications, such as cell phones, digital cameras, and notebooks with hubs or controllers with limited USB I/Os. The wide bandwidth (1100 MHz) of this switch allows signals to pass with minimum edge and phase distortion. The switch is bidirectional and offers little or no attenuation of the high-speed signals at the outputs. It is designed for low bit-to-bit skew and high channel-to-channel noise isolation, and is compatible with various standards, such as high-speed USB 2.0 (480 Mbps).

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
$V_{CC}$	Supply voltage	−0.5	7	V
$V_{IN}$	Control input voltage <sup>(2)(3)</sup>	−0.5	7	V
$V_{I/O}$	Switch I/O voltage <sup>(2)(3)(4)</sup>	HSD+, HSD−	$V_{CC} + 0.3$	V
		D+, D− when $V_{CC} > 0$	$V_{CC} + 0.3$	
		D+, D− when $V_{CC} = 0$	5.25	
$I_{IK}$	Control input clamp current	$V_{IN} < 0$	−50	mA
$I_{I/OK}$	I/O port clamp current	$V_{I/O} < 0$	−50	mA
$I_{I/O}$	ON-state switch current <sup>(5)</sup>		±64	mA
	Continuous current through $V_{CC}$ or GND		±100	mA
$T_{stg}$	Storage temperature	−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground, unless otherwise specified.
- (3) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (4)  $V_I$  and  $V_O$  are used to denote specific conditions for  $V_{I/O}$ .
- (5)  $I_I$  and  $I_O$  are used to denote specific conditions for  $I_{I/O}$ .

### 6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±8000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1000

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
$V_{CC}$	Supply voltage	2.25	4.3	V
$V_{IH}$	High-level control input voltage	$V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$	0.9	V
		$V_{CC} = 3 \text{ V to } 3.6 \text{ V}$	1.3	
		$V_{CC} = 4.3 \text{ V}$	1.7	
$V_{IL}$	Low-level control input voltage	$V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$	0.4	V
		$V_{CC} = 3 \text{ V to } 3.6 \text{ V}$	0.5	
		$V_{CC} = 4.3 \text{ V}$	0.7	
$V_{I/O}$	Data input-output voltage	0	$V_{CC}$	V
$T_A$	Operating free-air temperature	−40	85	°C

- (1) All unused control inputs of the device must be held at  $V_{CC}$  or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*.

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		TS3USB31	UNIT
		RSE (UQFN)	
		8 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	127.1	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	70.4	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	35	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	2.9	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	34.9	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 6.5 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

PARAMETER	TEST CONDITIONS	MIN	TYP <sup>(2)</sup>	MAX	UNIT
V <sub>IK</sub>	Input Clamp Voltage V <sub>CC</sub> = 3 V, I <sub>I</sub> = –18 mA			–1.2	V
I <sub>IN</sub>	Control inputs V <sub>CC</sub> = 4.3 V or 0 V, V <sub>IN</sub> = 0 to 4.3 V			±1	μA
I <sub>OZ</sub> <sup>(3)</sup>	V <sub>CC</sub> = 4.3 V, V <sub>O</sub> = 0 to 3.6 V, V <sub>I</sub> = 0, switch OFF			±1	μA
I <sub>OFF</sub>	D+ and D– V <sub>CC</sub> = 0 V, V <sub>O</sub> = 0 V to 4.3 V, V <sub>I</sub> = 0, V <sub>IN</sub> = V <sub>CC</sub> or GND			±2	μA
I <sub>CC</sub>	V <sub>CC</sub> = 4.3 V, I <sub>I/O</sub> = 0, switch ON or OFF			1	μA
ΔI <sub>CC</sub> <sup>(4)</sup>	Control inputs V <sub>CC</sub> = 4.3 V, V <sub>IN</sub> = 2.6 V			10	μA
C <sub>in</sub>	Control inputs V <sub>CC</sub> = 0 V, V <sub>IN</sub> = V <sub>CC</sub> or GND		1		pF
C <sub>io(OFF)</sub>	Off-state input-output capacitance V <sub>CC</sub> = 2.5 V, V <sub>I/O</sub> = 2.5 V or 0, switch OFF		2		pF
	V <sub>CC</sub> = 3.3 V, V <sub>I/O</sub> = 3.3 V or 0, switch OFF		2		
C <sub>io(ON)</sub>	On-state input-output capacitance V <sub>CC</sub> = 2.5 V, V <sub>I/O</sub> = 2.5 V or 0, switch ON		6		pF
	V <sub>CC</sub> = 3.3 V, V <sub>I/O</sub> = 3.3 V or 0, switch ON		6		
r <sub>on</sub> <sup>(5)</sup>	On-state resistance V <sub>CC</sub> = 2.5 V, V <sub>I</sub> = 0.4 V, I <sub>O</sub> = –8 mA		7.5	9	Ω
	V <sub>CC</sub> = 3 V, V <sub>I</sub> = 0.4 V, I <sub>O</sub> = –8 mA		6.5	10	
Δr <sub>on</sub>	Channel match V <sub>CC</sub> = 2.5 V, V <sub>I</sub> = 0.4 V, I <sub>O</sub> = –8 mA		0.4		Ω
	V <sub>CC</sub> = 3 V, V <sub>I</sub> = 0.4 V, I <sub>O</sub> = –8 mA		0.35		
r <sub>on(flat)</sub>	On-state resistance flatness V <sub>CC</sub> = 2.5 V, V <sub>I</sub> = 0 V or 1 V, I <sub>O</sub> = –8 mA		0.07		Ω
	V <sub>CC</sub> = 3 V, V <sub>I</sub> = 0 V or 1 V, I <sub>O</sub> = –8 mA		2		

(1) V<sub>IN</sub> and I<sub>IN</sub> refer to control inputs. V<sub>I</sub>, V<sub>O</sub>, I<sub>I</sub>, and I<sub>O</sub> refer to data pins.

(2) All typical values are at V<sub>CC</sub> = 3.3 V (unless otherwise noted), T<sub>A</sub> = 25°C.

(3) For I/O ports, the parameter I<sub>OZ</sub> includes the input leakage current.

(4) This is the increase in supply current for each input that is at the specified TTL voltage level, rather than V<sub>CC</sub> or GND.

(5) Measured by the voltage drop between the A and B terminals at the indicated current through the switch. ON-state resistance is determined by the lower of the voltages of the two (A or B) terminals.

## 6.6 Dynamic Electrical Characteristics

over operating range, T<sub>A</sub> = –40°C to +85°C, GND = 0 V

PARAMETER	TEST CONDITIONS	TYP <sup>(1)</sup>	UNIT
<b>V<sub>CC</sub> = 2.5 V ± 10%</b>			
X <sub>TALK</sub>	Crosstalk R <sub>L</sub> = 50 Ω, f = 240 MHz, See <a href="#">Figure 6</a>	–53	dB
O <sub>IRR</sub>	OFF isolation R <sub>L</sub> = 50 Ω, f = 240 MHz, See <a href="#">Figure 5</a>	–30	dB
BW	Bandwidth (–3 dB) R <sub>L</sub> = 50 Ω, C <sub>L</sub> = 5 pF, See <a href="#">Figure 7</a>	1100	MHz
<b>V<sub>CC</sub> = 3.3 V ± 10%</b>			
X <sub>TALK</sub>	Crosstalk R <sub>L</sub> = 50 Ω, f = 240 MHz, See <a href="#">Figure 6</a>	–53	dB

(1) For Max or Min conditions, use the appropriate value specified under [Electrical Characteristics](#) for the applicable device type.

## Dynamic Electrical Characteristics (continued)

over operating range,  $T_A = -40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ ,  $\text{GND} = 0\text{ V}$

PARAMETER		TEST CONDITIONS	TYP <sup>(1)</sup>	UNIT
$O_{\text{IRR}}$	OFF isolation	$R_L = 50\ \Omega$ , $f = 240\text{ MHz}$ , See <a href="#">Figure 5</a>	-30	dB
BW	Bandwidth (-3 dB)	$R_L = 50\ \Omega$ , $C_L = 5\text{ pF}$ , See <a href="#">Figure 7</a>	1100	MHz

## 6.7 Switching Characteristics

over operating range,  $T_A = -40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ ,  $\text{GND} = 0\text{ V}$

(1) For Max or Min conditions, use the appropriate value specified under [Electrical Characteristics](#) for the applicable device type.

(2) Specified by design

(3) The bus switch contributes no propagational delay other than the RC delay of the on resistance of the switch and the load capacitance. The time constant for the switch alone is of the order of 0.25 ns for 10-pF load. Since this time constant is much smaller than the rise and fall times of typical driving signals, it adds very little propagational delay to the system. Propagational delay of the bus switch, when used in a system, is determined by the driving circuit on the driving side of the switch and its interactions with the load on the driven side.

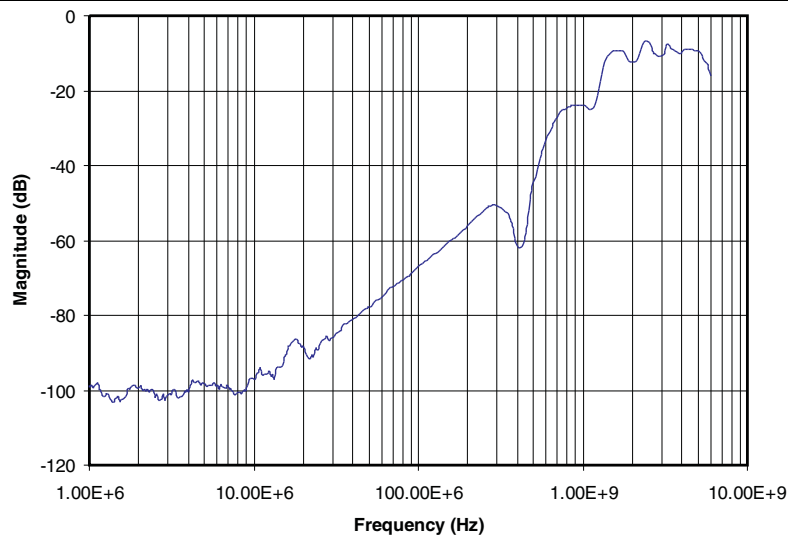

## 7 Application Information

## 9 Detailed Description

### 9.1 Overview

The TS3USB31E is a 1:1 SPST high-bandwidth switch specially designed for the switching of high-speed USB 2.0 signals. The switch is bidirectional and offers little or no attenuation of the high-speed signals. It is designed for low bit-to-bit skew and high channel-to-channel noise isolation, and is compatible with various standards, such as high-speed USB 2.0 (480 Mbps).

### 9.2 Functional Block Diagram

Copyright © 2016, Texas Instruments Incorporated

### 9.3 Feature Description

#### 9.3.1 I<sub>OFF</sub> Supports Partial Power-Down Mode Operation

When  $V_{CC} = 0$  V, the signal path is placed in a high impedance state which isolates the bus. This allows signals to be present on the D $\pm$  and HSD $\pm$  pins before the device is powered up without damaging the device.

### 9.4 Device Functional Modes

The TS3USB31E device has two modes that are digitally controlled by the OE pin. Setting the OE pin *High* isolates the signal path by a high impedance state. See [Table 1](#).

**Table 1. Truth Table**

$\overline{OE}$	FUNCTION
H	Disconnect
L	D+, D- = HSD+, HSD-

## 10 Application and Implementation

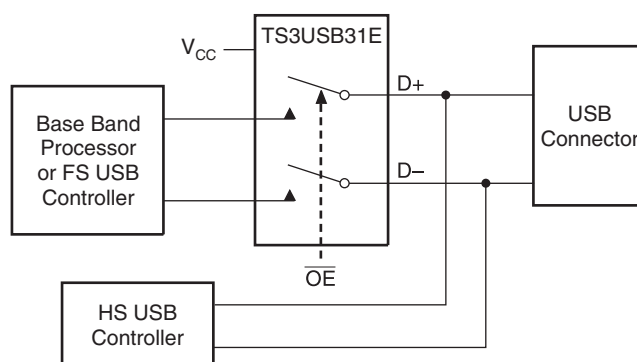

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 10.1 Application Information

The TS3USB31E device is used to isolate a USB bus when it is not in use to prevent two different USB devices from interfering with each other.

### 10.2 Typical Application

**Figure 13. Application Diagram**

#### 10.2.1 Design Requirements

Design requirements of the USB 1.0, 1.1, and 2.0 standards must be followed. TI recommends that the digital control pin OE be pulled up to  $V_{CC}$  or down to ground to avoid undesired switch positions that could result from the floating pin.

#### 10.2.2 Detailed Design Procedure

The TS3USB31E can be properly operated without any external components. However, it is recommended that unused pins be connected to ground through a 50- $\Omega$  resistor to prevent signal reflections back into the device.

The N.C pin must be left floating.

## Typical Application (continued)

### 10.2.3 Application Curves

Figure 14. Eye Pattern: 480-Mbps USB Signal with No Switch (Through Path)

Figure 15. Eye Pattern: 480-Mbps USB Signal with Switch NO Path

## 11 Power Supply Recommendations

Power to the device is supplied through the  $V_{CC}$  pin. TI recommends placing a bypass capacitor as close as possible to the supply pin  $V_{CC}$  to help smooth out lower frequency noise to provide better load regulation across the frequency spectrum.

This device doesn't require any power sequencing with respect to other devices in the system due to its power off isolation feature which allows signals to be present on the  $D_{\pm}$  and  $HSD_{\pm}$  pins before the device is powered up without damaging the device.

## 12 Layout

### 12.1 Layout Guidelines

Place supply bypass capacitors as close to  $V_{CC}$  pin as possible and avoid placing the bypass caps near the  $D+$  and  $D-$  traces.

The high-speed  $D+$  and  $D-$  traces must always be of equal length and must be no more than 4 inches; otherwise, the eye diagram performance may be degraded. A high-speed USB connection is made through a shielded, twisted pair cable with a differential characteristic impedance. In layout, the impedance of  $D+$  and  $D-$  traces must match the cable characteristic differential impedance for optimal performance.

Route the high-speed USB signals using a minimum of vias and corners which reduces signal reflections and impedance changes. When a via must be used, increase the clearance size around it to minimize its capacitance. Each via introduces discontinuities in the transmission line of the signal and increases the chance of picking up interference from the other layers of the board. Be careful when designing test points on twisted pair lines; through-hole pins are not recommended.

When it becomes necessary to turn  $90^\circ$ , use two  $45^\circ$  turns or an arc instead of making a single  $90^\circ$  turn. This reduces reflections on the signal traces by minimizing impedance discontinuities.

Do not route USB traces under or near crystals, oscillators, clock signal generators, switching regulators, mounting holes, magnetic devices, or IC's that use or duplicate clock signals.

Avoid stubs on the high-speed USB signals because they cause signal reflections. If a stub is unavoidable, then the stub must be less than 200 mm.

Route all high-speed USB signal traces over continuous planes ( $V_{CC}$  or  $GND$ ), with no interruptions.

Avoid crossing over anti-etch, commonly found with plane splits.

Due to high frequencies associated with the USB, a printed circuit board with at least four layers is recommended: two signal layers separated by a ground layer and a power layer. The majority of signal traces must run on a single layer, preferably top layer. Immediately next to this layer must be the  $GND$  plane, which is solid with no cuts. Avoid running signal traces across a split in the ground or power plane. When running across split planes is unavoidable, sufficient decoupling must be used. Minimizing the number of signal vias reduces EMI by reducing inductance at high frequencies. For more information on layout guidelines, see [High Speed Layout Guidelines](#) (SCAA082) and [USB 2.0 Board Design and Layout Guidelines](#) (SPRAAR7).

## 12.2 Layout Example

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**TAPE AND REEL INFORMATION**

\*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
TS3USB31ERSER	UQFN	RSE	8	3000	180.0	8.4	1.7	1.7	0.7	4.0	8.0	Q2

## TAPE AND REEL BOX DIMENSIONS

\*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
TS3USB31ERSER	UQFN	RSE	8	3000	202.0	201.0	28.0

# EXAMPLE BOARD LAYOUT

RSE0008A

UQFN - 0.6 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

LAND PATTERN EXAMPLE  
SCALE:30X

SOLDER MASK DETAILS  
NOT TO SCALE
