

SCDS215A-OCTOBER 2005-REVISED JULY 2008

5-V/3.3-V SINGLE-CHANNEL 2:1 MULTIPLEXER/DEMULTIPLEXER

FEATURES

- Isolation in the Powered-Off Mode, $V_{+} = 0$
- Specified Break-Before-Make Switching
- Low ON-State Resistance (1 Ω)
- **Control Inputs Are 5.5-V Tolerant**
- Low Charge Injection
- Excellent ON-State Resistance Matching
- Low Total Harmonic Distortion (THD)
- 1.65-V to 5.5-V Single-Supply Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- **ESD Performance Tested Per JESD 22**
 - 2000-V Human-Body Model (A114-B, Class II)
 - 1000-V Charged-Device Model (C101)

DESCRIPTION/ORDERING INFORMATION

The TS5A3153 is a single-pole double-throw (SPDT) analog switch that is designed to operate from 1.65 V to 5.5 V. The device offers a low ON-state resistance and an excellent on-resistance matching with the break-before-make feature, to prevent signal distortion during the transferring of a signal from one channel to another. The device has an excellent total harmonic distortion (THD) performance and consumes very low power. These features make this device suitable for portable audio applications.

ORDERING INFORMATION

T _A	PACKAGE ⁽¹⁾⁽²⁾		ORDERABLE PART NUMBER	TOP-SIDE MARKING ⁽³⁾
–40°C to 85°C	NanoStar™ – WCSP (DSBGA) 0.23-mm Large Bump – YZP (Pb-free)	Reel of 3000	TS5A3153YZPR	J57
	SSOP – DCU	Reel of 3000	TS5A3153DCUR	JCD_

Package drawings, thermal data, and symbolization are available at www.ti.com/packaging. (1)

For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI (2)website at www.ti.com.

DCU: The actual top-side marking has one additional character that designates the assembly/test site. (3) YZP: The actual top-side marking has three preceding characters to denote year, month, and sequence code, and one following character to designate the assembly/test site. Pin 1 identifier indicates solder-bump composition (1 = SnPb, • = Pb-free).

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet. NanoStar is a trademark of Texas Instruments.

APPLICATIONS

- **Cell Phones** •
- PDAs
- **Portable Instrumentation**
- Audio and Video Signal Routing •
- Low-Voltage Data-Acquisition Systems •
- **Communication Circuits**
- Modems
- **Hard Drives**

Summary of Characteristics⁽¹⁾

Configuration	Single-Pole, Double-Throw 2:1 Multiplexer/Demultiplexer (SPDT)
Number of channels	1
ON-state resistance (ron)	1.1 Ω
ON-state resistance match (Δr_{on})	0.1 Ω
ON-state resistance flatness (ron(flat))	0.15 Ω
Turn-on/turn-off time (t _{ON} /t _{OFF})	20 ns/15 ns
Make-before-break time (t _{MBB})	12 ns
Charge injection (Q _C)	36 pC
Bandwidth (BW)	100 MHz
OFF isolation (O _{ISO})	–65 dB at 1 MHz
Crosstalk (X _{TALK})	–68 dB at 1 MHz
Total harmonic distortion (THD)	0.01%
Leakage current (I _{COM(OFF)} /I _{NC(OFF)})	±20 nA
Power-supply current (I ₊)	0.1 μΑ
Package option	8-pin SSOP or DSBGA

(1) $V_+ = 5 V, T_A = 25^{\circ}C$

0	Declares the second interaction (7)	DCU package		227	°C/W
θ_{JA}	Package thermal impedance ⁽⁷⁾	YZP package		102	°C/VV
T _{stg}	Storage temperature range	·	-65	150	°C

(1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.

(2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum

(3) All voltages are with respect to ground, unless otherwise specified.

(4) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

(5) This value is limited to 5.5 V maximum.

(6) Pulse at 1-ms duration < 10% duty cycle.

(7) The package thermal impedance is calculated in accordance with JESD 51-7.

PIN DESCRIPTION

PIN NO.	NAME	DESCRIPTION				
1	COM	Common				
2	EN	able control input				
3	GND	Digital ground				
4	GND	Digital ground				
5	IN	Digital control to connect the COM to NO or NC				
6	NO	Normally open				
7	NC	Normally closed				
8	V ₊	Power supply				

PARAMETER DESCRIPTION

SYMBOL	DESCRIPTION
V _{COM}	Voltage at COM
V _{NC}	Voltage at NC
V _{NO}	Voltage at NO
r _{on}	Resistance between COM and NC or COM and NO ports when the channel is ON
r _{peak}	Peak on-state resistance over a specified voltage range
Δr _{on}	Difference of r _{on} between channels in a specific device
r _{on(flat)}	Difference between the maximum and minimum value of ron in a channel over the specified range of conditions
I _{NC(OFF)}	Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the OFF state under worst-case input and output conditions
I _{NC(PWROFF)}	Leakage current measured at the NC port during the power-off condition, $V_{+} = 0$
I _{NO(OFF)}	Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the OFF state under worst-case input and output conditions
I _{NO(PWROFF)}	Leakage current measured at the NO port during the power-off condition, $V_{+} = 0$
I _{NC(ON)}	Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the ON state and the output (COM) open
I _{NO(ON)}	Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the ON state and the output (COM) open
I _{COM(ON)}	Leakage current measured at the COM port, with the corresponding channel (COM to NO or COM to NC) in the ON state and the output (NC or NO) open
I _{COM(OFF)}	Leakage current measured at the COM port, with the corresponding channel (COM to NO or COM to NC) in the OFF state and the output (NC or NO) open
I _{COM(PWROFF)}	Leakage current measured at the COM port during the power-off condition, $V_{+} = 0$
V _{IH}	Minimum input voltage for logic high for the control input (IN, EN)
V _{IL}	Maximum input voltage for logic low for the control input (IN, EN)
VI	Voltage at the control input (IN, EN)
I _{IH} , I _{IL}	Leakage current measured at the control input (IN, EN)
t _{ON}	Turn-on time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM, NC, or NO) signal when the switch is turning ON.
t _{OFF}	Turn-off time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM, NC, or NO) signal when the switch is turning OFF.
t _{BBM}	Break-before-make time. This parameter is measured under the specified range of conditions and by the propagation delay between the output of two adjacent analog channels (NC and NO) when the control signal changes state.
Q _C	Charge injection is a measurement of unwanted signal coupling from the control (IN) input to the analog (NC, NO, or COM) output. This is measured in coulomb (C) and measured by the total charge induced due to switching of the control input. Charge injection, $Q_C = C_L \times \Delta V_{COM}$, C_L is the load capacitance, and ΔV_{COM} is the change in analog output voltage.
C _{NC(OFF)}	Capacitance at the NC port when the corresponding channel (NC to COM) is OFF
C _{NO(OFF)}	Capacitance at the NO port when the corresponding channel (NO to COM) is OFF
C _{NC(ON)}	Capacitance at the NC port when the corresponding channel (NC to COM) is ON
C _{NO(ON)}	Capacitance at the NO port when the corresponding channel (NO to COM) is ON

SCDS215A-OCTOBER 2005-REVISED JULY 2008

PARAMETER DESCRIPTION (continued)

SYMBOL	DESCRIPTION
C _{COM(ON)}	Capacitance at the COM port when the corresponding channel (COM to NC or COM to NO) is ON
C _{COM(OFF)}	Capacitance at the COM port when the corresponding channel (COM to NC or COM to NO) is OFF
CI	Capacitance of control input (IN)
O _{ISO}	OFF isolation of the switch is a measurement of OFF-state switch impedance. This is measured in dB in a specific frequency, with the corresponding channel (NC to COM or NO to COM) in the OFF state.
X _{TALK}	Crosstalk is a measurement of unwanted signal coupling from an ON channel to an OFF channel (NC to NO or NO to NC). This is measured in a specific frequency and in dB.
BW	Bandwidth of the switch. This is the frequency where the gain of an ON channel is -3 dB below the DC gain.
THD	Total harmonic distortion describes the signal distortion caused by the analog switch. This is defined as the ratio of root mean square (RMS) value of the second, third, and higher harmonic to the absolute magnitude of fundamental harmonic
l+	Static power-supply current with the control (IN, \overline{EN}) pin at V ₊ or GND

⁽¹⁾ **Status:** For more details on status, see our product life cycle.

⁽²⁾ Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

⁽⁴⁾ Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
