

0.9-Ω SPDT ANALOG SWITCH 5-V/3.3-V SINGLE-CHANNEL 2:1 MULTIPLEXER/DEMULTIPLEXER

Check for Samples: [TS5A3154](#)

FEATURES

- Specified Make-Before-Break Switching
- Low ON-State Resistance (0.9 Ω)
- Control Inputs Are 5.5-V Tolerant
- Low Charge Injection
- Excellent ON-State Resistance Matching
- Low Total Harmonic Distortion (THD)
- 1.65-V to 5.5-V Single-Supply Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested Per JESD 22
 - 2000-V Human-Body Model (A114-B, Class II)
 - 1000-V Charged-Device Model (C101)

APPLICATIONS

- Cell Phones
- PDAs
- Portable Instrumentation
- Audio and Video Signal Routing
- Low-Voltage Data-Acquisition Systems
- Communication Circuits
- Modems
- Hard Drives
- Computer Peripherals
- Wireless Terminals and Peripherals

DESCRIPTION/ORDERING INFORMATION

The TS5A3154 is a single-pole double-throw (SPDT) analog switch that is designed to operate from 1.65 V to 5.5 V. The device offers a low ON-state resistance and an excellent channel-to-channel ON-state resistance matching. The device has excellent total harmonic distortion (THD) performance and consumes very low power. These features make this device suitable for portable audio applications.

Table 1. ORDERING INFORMATION

T _A	PACKAGE ^{(1) (2)}		ORDERABLE PART NUMBER	TOP-SIDE MARKING ⁽³⁾
–40°C to 85°C	NanoFree™ – WCSP (DSBGA) 0.23-mm Large Bump – YZP (Pb-free)	Reel of 3000	TS5A3154YZPR	__ _JX_
	SSOP – DCU	Reel of 3000	TS5A3154DCUR	JCF_

(1) Package drawings, thermal data, and symbolization are available at www.ti.com/packaging.

(2) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at www.ti.com.

(3) DCU: The actual top-side marking has one additional character that designates the assembly/test site.

YZP: The actual top-side marking has three preceding characters to denote year, month, and sequence code, and one following character to designate the assembly/test site. Pin 1 identifier indicates solder-bump composition (1 = SnPb, • = Pb-free).

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

NanoFree is a trademark of Texas Instruments.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of the Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

L	H	OFF	ON
H	X	OFF	OFF

Table 3. Summary of Characteristics⁽¹⁾

Configuration	Single-Pole, Double-Throw 2:1 Multiplexer/Demultiplexer (SPDT)
Number of channels	1
ON-state resistance (r_{on})	0.9 Ω
ON-state resistance match (Δr_{on})	0.1 Ω
ON-state resistance flatness ($r_{\text{on(flat)}}$)	0.15 Ω
Turn-on/turn-off time ($t_{\text{ON}}/t_{\text{OFF}}$)	8 ns/12.5 ns
Make-before-break time (t_{MBB})	12 ns
Charge injection (Q_{C})	10 pC
Bandwidth (BW)	100 MHz
OFF isolation (O_{ISO})	–64 dB at 1 MHz
Crosstalk (X_{TALK})	–64 dB at 1 MHz
Total harmonic distortion (THD)	0.004%
Leakage current ($I_{\text{COM(OFF)}/I_{\text{NC(OFF)}}$)	± 20 nA
Power-supply current (I_{+})	0.1 μA
Package option	8-pin SSOP or DSBGA

(1) $V_{+} = 5$ V, $T_{\text{A}} = 25^{\circ}\text{C}$

Absolute Minimum and Maximum Ratings^{(1) (2)}

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_+	Supply voltage range ⁽³⁾		–0.5	6.5	V
V_{NC} , V_{NO} , V_{COM}	Analog voltage range ^{(3) (4) (5)}		–0.5	$V_+ + 0.5$	V
I_K	Analog port diode current	$V_{NC}, V_{NO}, V_{COM} < 0$ or $V_{NO}, V_{NC}, V_{COM} > V_+$	–50	50	mA
I_{NC} , I_{COM} , I_{NO}	On-state switch current	$V_{NC}, V_{NO}, V_{COM} = 0$ to V_+	–200	200	mA
	On-state peak switch current ⁽⁶⁾		–400	400	
V_I	Digital input voltage range ^{(3) (4)}		–0.5	6.5	V
I_{IK}	Digital input clamp current	$V_I < 0$	–50		mA
I_+	Continuous current through V_+			100	mA
I_{GND}	Continuous current through GND		–100	100	mA
θ_{JA}	Package thermal impedance ⁽⁷⁾	DCU package		227	°C/W
		YZP package		102	
T_{stg}	Storage temperature range		–65	150	°C

- (1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.
- (2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum
- (3) All voltages are with respect to ground, unless otherwise specified.
- (4) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (5) This value is limited to 5.5 V maximum.
- (6) Pulse at 1-ms duration < 10% duty cycle.
- (7) The package thermal impedance is calculated in accordance with JESD 51-7.

Electrical Characteristics for 5-V Supply⁽¹⁾

$V_+ = 4.5 \text{ V to } 5.5 \text{ V}$, $T_A = -40^\circ\text{C to } 85^\circ\text{C}$ (unless otherwise noted)

PIN DESCRIPTION

PIN NO.	NAME	DESCRIPTION
1	COM	Common
2	$\overline{\text{EN}}$	Enable control input
3	GND	Digital ground
4	GND	Digital ground
5	IN	Digital control to connect the COM to NO or NC
6	NO	Normally open
7	NC	Normally closed
8	V_+	Power supply

PARAMETER DESCRIPTION

SYMBOL	DESCRIPTION
V_{COM}	Voltage at COM
V_{NC}	Voltage at NC
V_{NO}	Voltage at NO
r_{on}	Resistance between COM and NC or COM and NO ports when the channel is ON
Δr_{on}	Difference of r_{on} between channels in a specific device
$r_{\text{on(flat)}}$	Difference between the maximum and minimum value of r_{on} in a channel over the specified range of conditions
$I_{\text{NC(OFF)}}$	Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the OFF state
$I_{\text{NO(OFF)}}$	Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the OFF state
$I_{\text{NC(ON)}}$	Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the ON state and the output (COM) open
$I_{\text{NO(ON)}}$	Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the ON state and the output (COM) open
$I_{\text{COM(ON)}}$	Leakage current measured at the COM port, with the corresponding channel (COM to NO or COM to NC) in the ON state and the output (NC or NO) open
V_{IH}	Minimum input voltage for logic high for the control input (IN)
V_{IL}	Maximum input voltage for logic low for the control input (IN)
V_{I}	Voltage at the control input (IN)
$I_{\text{IH}}, I_{\text{IL}}$	Leakage current measured at the control input (IN)
t_{ON}	Turn-on time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM, NC, or NO) signal when the switch is turning ON.
t_{OFF}	Turn-off time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM, NC, or NO) signal when the switch is turning OFF.
t_{BBM}	Break-before-make time. This parameter is measured under the specified range of conditions and by the propagation delay between the output of two adjacent analog channels (NC and NO) when the control signal changes state.
Q_{C}	Charge injection is a measurement of unwanted signal coupling from the control (IN) input to the analog (NC, NO, or COM) output. This is measured in coulomb (C) and measured by the total charge induced due to switching of the control input. Charge injection, $Q_{\text{C}} = C_{\text{L}} \times \Delta V_{\text{COM}}$, C_{L} is the load capacitance and ΔV_{COM} is the change in analog output voltage.
$C_{\text{NC(OFF)}}$	Capacitance at the NC port when the corresponding channel (NC to COM) is OFF
$C_{\text{NO(OFF)}}$	Capacitance at the NO port when the corresponding channel (NO to COM) is OFF
$C_{\text{NC(ON)}}$	Capacitance at the NC port when the corresponding channel (NC to COM) is ON
$C_{\text{NO(ON)}}$	Capacitance at the NO port when the corresponding channel (NO to COM) is ON
$C_{\text{COM(ON)}}$	Capacitance at the COM port when the corresponding channel (COM to NC or COM to NO) is ON
C_{I}	Capacitance of control input (IN)
O_{ISO}	OFF isolation of the switch is a measurement of OFF-state switch impedance. This is measured in dB in a specific frequency, with the corresponding channel (NC to COM or NO to COM) in the OFF state.
X_{TALK}	Crosstalk is a measurement of unwanted signal coupling from an ON channel to an OFF channel (NC to NO or NO to NC). This is measured in a specific frequency and in dB.
BW	Bandwidth of the switch. This is the frequency where the gain of an ON channel is –3 dB below the DC gain.
THD	Total harmonic distortion describes the signal distortion caused by the analog switch. This is defined as the ratio of root mean square (RMS) value of the second, third, and higher harmonic to the absolute magnitude of fundamental harmonic.

PARAMETER DESCRIPTION (continued)

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](https://www.ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
