

# TUSB522P Schematic Checklist

Malik Barton

## ABSTRACT

This application report for TUSB522P, a single-lane USB 3.1 GEN1 redriver and signal conditioner supporting 5 Gbps. The device allows the dual-channel capability to enable a system to maintain signal integrity on both transmit and receive data paths. This schematic checklist provides a brief explanation of each device pin and the recommended configuration of the device pin for default operation. Use this information to check the connectivity for each TUSB522P on a system schematic.

This document aids the design at the system level for general applications. This document should not be the only resource used. In addition to this list, customers are advised to use the information in the TUSB522P datasheet, TUSB522P EVM User's Guide and associated documents to gain a full understanding of device functionality. Project collateral discussed in this application report can be downloaded from the following URL: [www.ti.com/lit/zip/SLLA399](http://www.ti.com/lit/zip/SLLA399).

## 1 TUSB522P Schematic Checklist

**Table 1. Schematic Checklist**

Pin Name	Pin Number(s)	Pin Description	Recommendation
<b>Power Pins</b>			
VCC	1,13	3.3 V Positive Power Supply	Parallel array of one 1 $\mu$ F and two 0.1 $\mu$ F capacitors to GND.
GND	10, 21, PAD	Ground	Connected to Ground.
<b>Configuration Pins</b>			
EQ1	2	Tri-level configuration input pins for CH 1 Equalization.	Use 47k $\Omega$ pull-down resistor for 3 dB of gain on CH 1. Refer to Table 1 in the datasheet for additional configurations. To avoid over equalizing data start at the lowest settings and increase until desired eye is achieved.
EQ2	17	Tri-level configuration input pins for CH 2 Equalization.	Use 47k $\Omega$ pull-down resistor for 3 dB of gain on CH 2. Refer to Table 1 in the datasheet for additional configurations. To avoid over equalizing data start at the lowest settings and increase until desired eye is achieved.
DE1	16	Tri-level configuration input pins for CH 1 De-emphasis.	Use 47k $\Omega$ pull-down resistor for 0 dB of de-emphasis on CH 1 output. Refer to Table 1 in the datasheet for additional configurations. To avoid over equalizing data start at the lowest settings and increase until desired eye is achieved.
DE2	3	Tri-level configuration input pins for CH 2 De-emphasis.	Use 47k $\Omega$ pull-down resistor for 0 dB of de-emphasis on CH 2 output. Refer to Table 1 in the datasheet for additional configurations. To avoid over equalizing data start at the lowest settings and increase until desired eye is achieved.
OS1	15	Tri-level configuration input pins for CH 1 Output Swing.	Use 47k $\Omega$ pull-down resistor for 0.9 x V <sub>pp</sub> on CH 1 output. Refer to Table 1 in the datasheet for additional configurations. To avoid over equalizing data start at the lowest settings and increase until desired eye is achieved.
OS2	4	Tri-level configuration input pins for CH 2 Output Swing.	Use 47k $\Omega$ pull-down resistor for 0.9 x V <sub>pp</sub> on CH 1 output. Refer to Table 1 in the datasheet for additional configurations. To avoid over equalizing data start at the lowest settings and increase until desired eye is achieved.
EN_RXD	5	Active high device enable, has an internal 660-k $\Omega$ pull-down resistor.	Add a 4.7K $\Omega$ Pull up to VCC for normal operation. Resets state machine when toggled.

**Table 1. Schematic Checklist (continued)**

Pin Name	Pin Number(s)	Pin Description	Recommendation
<b>USB Data Lines</b>			
TX1P	22	Differential output for 5 Gbps positive signal on CH1	Connect to the USB3.1 RXP/N terminals from an USB3 HOST, HUB or DEVICE using 0.1uF AC coupling capacitors or connect to the TXP/N terminals from an USB3 connector using 0.1uF AC coupling capacitors. These pins allow polarity swapping.
TX1N	23		
TX2P	12	Differential output for 5 Gbps positive signal on CH2	
TX2N	11		
RX1P	9	Differential output for 5 Gbps positive signal on CH1	Connect to the USB3.1 TXP/N terminals from an USB3 HOST, HUB or DEVICE using 0.1uF AC coupling capacitors or connect to the RXP/N terminals from an USB3 connector. NO AC coupling capacitors. These pins allow polarity swapping.
RX1N	8		
RX2P	19	Differential output for 5 Gbps positive signal on CH2	
RX2N	20		
<b>Misc. Pins</b>			
RSV	14	Reserved	Leave no-connected.
NC	6,7,18,24	No Connection	Leave no-connected.
