

# TUSB1210 Stand-Alone USB Transceiver Chip Silicon

## 1 Features

- USB2.0 PHY transceiver chip, designed to interface with a USB controller through a ULPI interface, fully compliant with:
  - *Universal serial bus specification* Rev. 2.0
  - *On-the-go supplement to the USB 2.0 specification* Rev. 1.3
  - *UTMI+ low pin interface (ULPI) specification* Rev. 1.1
  - *ULPI 12-pin SDR interface*
- DP/DM line external component compensation (patent #US7965100 B1)
- Interfaces to host, peripheral and OTG device cores; optimized for portable devices or system ASICs with built-in USB OTG device core
- Complete USB OTG physical front-end that supports host negotiation protocol (HNP) and session request protocol (SRP)
- $V_{BUS}$  overvoltage protection circuitry protects  $V_{BUS}$  pin in range  $-2\text{ V}$  to  $20\text{ V}$
- Internal 5-V short-circuit protection of DP, DM, and ID pins for cable shorting to  $V_{BUS}$  pin
- ULPI interface:
  - I/O interface (1.8 V) optimized for nonterminated  $50\ \Omega$  line impedance
  - ULPI CLOCK pin (60 MHz) supports input and output clock configurations
  - Fully programmable ULPI-compliant register set
- Full industrial grade operating temperature range from  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$
- Available in a 32-pin quad flat no lead [QFN (RHB)] package

## 2 Applications

- [Mobile phones](#)
- [Portable computers](#)
- [Tablet devices](#)
- [Video game consoles](#)
- [Desktop computers](#)
- [Portable music players](#)

## 3 Description

The TUSB1210 is a USB2.0 transceiver chip, designed to interface with a USB controller through a ULPI interface. The device supports all USB2.0 data rates (high-speed 480 Mbps, full-speed 12 Mbps, and low-speed 1.5 Mbps), and is compliant to both host and peripheral modes. The device additionally supports a UART mode and legacy ULPI serial modes. TUSB1210 also supports the OTG (Ver1.3) optional addendum to the USB 2.0 Specification, including HNP and SRP.

The DP/DM external component compensation in the transmitter compensates for variations in the series impedance in order to match with the data line impedance and the receiver input impedance, to limit data reflections and thereby improve eye diagrams.

### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TUSB1210	VQFN (32)	5.00 mm × 5.00 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

## 4 Revision History

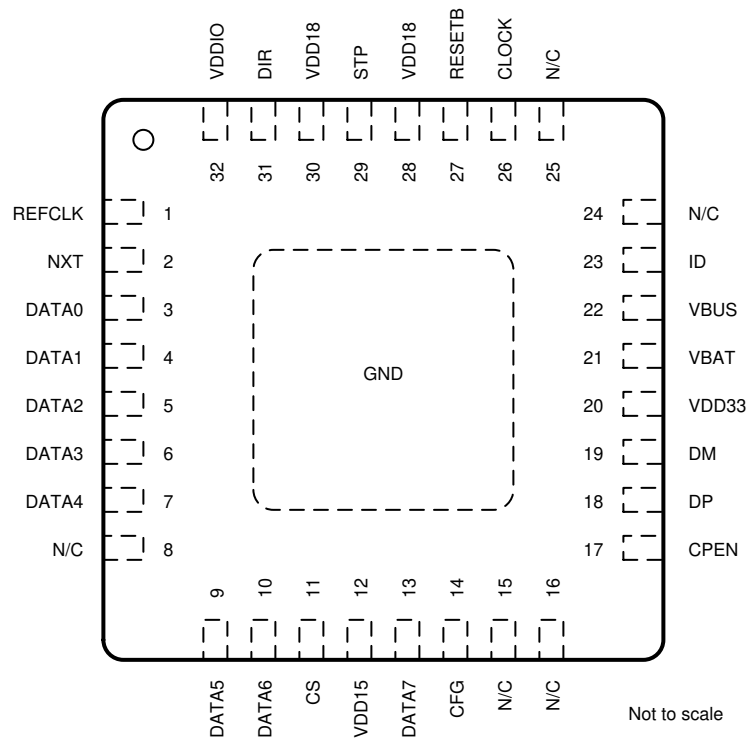

<b>Changes from Revision I (December 2019) to Revision J (July 2021)</b>	<b>Page</b>
• Updated the numbering format for tables, figures, and cross-references throughout the document.....	<b>1</b>
• Changed the $t_{DC}$ , $t_{DD}$ OUTPUT CLOCK delay value From: MAX = 9 ns To: MAX = 5 ns in the <i>Timing Requirements</i> .....	<b>13</b>
• Changed the $t_{DC}$ , $t_{DD}$ OUTPUT CLOCK delay value From: MIN = blank To: MIN = 1.2 ns in the <i>Timing Requirements</i> .....	<b>13</b>
• Added the <i>Related Documentation</i> section.....	<b>63</b>
<b>Changes from Revision H (June 2015) to Revision I (December 2019)</b>	<b>Page</b>
• Changed the document from a data manual format to a TI data sheet format .....	<b>1</b>
• Changed RHB Package 32-Pin OFN To: RHB Package 32-Pin VQFN in <i>Pin Configuration and Functions</i> .....	<b>4</b>
• Changed the HBM value From: $\pm 2$ V To : $\pm 2000$ V in the <i>ESD Ratings</i> .....	<b>6</b>
• Changed the $t_{SC}$ , $t_{SD}$ INPUT CLOCK value From: MAX = 3 ns To: MIN = 3 ns in the <i>Timing Requirements</i> ..	<b>13</b>
• Changed the $t_{SC}$ , $t_{SD}$ OUTPUT CLOCK value From: MAX = 6 ns To: MIN = 6 ns in the <i>Timing Requirements</i> ..	<b>13</b>
• Deleted section Via Channel from the <i>Mechanical Packaging and Orderable Information</i> section .....	<b>63</b>
<b>Changes from Revision G (October 2014) to Revision H (June 2015)</b>	<b>Page</b>
• Move Storage Temperature From: <i>ESD Ratings</i> To: <i>Absolute Maximum Ratings</i> .....	<b>6</b>
• Changed the <i>Handling Ratings</i> table To: <i>ESD Ratings</i> .....	<b>6</b>
<b>Changes from Revision F (July 2013) to Revision G (October 2014)</b>	<b>Page</b>
• Added <i>Pin Configuration and Functions</i> section, <i>ESD Rating</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i>	

---

section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section .....	<b>1</b>

## 5 Pin Configuration and Functions

**Figure 5-1. RHB Package Top View**

**Table 5-1. Pin Functions**

PIN		A/D	TYPE	LEVEL	DESCRIPTION
NAME	NO.				
CFG	14	D	I	V <sub>DDIO</sub>	REFCLK clock frequency configuration pin. Two frequencies are supported: 19.2 MHz when 0, or 26 MHz when 1.
CLOCK	26	D	O	V <sub>DDIO</sub>	ULPI 60 MHz clock on which ULPI data is synchronized. Two modes are possible: Input Mode: CLOCK defaults as an input. Output Mode: When an input clock is detected on REFCLK pin (after 4 rising edges) then CLOCK will change to an output.
CPEN	17	D	O	V <sub>DD33</sub>	CMOS active-high digital output control of external 5 V VBUS supply
CS	11	D	I	V <sub>DDIO</sub>	Active-high chip select pin. When low the IC is in power down and ULPI bus is tri-stated. When high normal operation. Tie to V <sub>DDIO</sub> if unused.
DATA0	3	D	I/O	V <sub>DDIO</sub>	ULPI DATA input or output signal 0 synchronized to CLOCK
DATA1	4	D	I/O	V <sub>DDIO</sub>	ULPI DATA input or output signal 1 synchronized to CLOCK
DATA2	5	D	I/O	V <sub>DDIO</sub>	ULPI DATA input or output signal 2 synchronized to CLOCK
DATA3	6	D	I/O	V <sub>DDIO</sub>	ULPI DATA input or output signal 3 synchronized to CLOCK
DATA4	7	D	I/O	V <sub>DDIO</sub>	ULPI DATA input or output signal 4 synchronized to CLOCK
DATA5	9	D	I/O	V <sub>DDIO</sub>	ULPI DATA input or output signal 5 synchronized to CLOCK
DATA6	10	D	I/O	V <sub>DDIO</sub>	ULPI DATA input or output signal 6 synchronized to CLOCK
DATA7	13	D	I/O	V <sub>DDIO</sub>	ULPI DATA input or output signal 7 synchronized to CLOCK
DIR	31	D	O	V <sub>DDIO</sub>	ULPI DIR output signal
DM	19	A	I/O	V <sub>DD33</sub>	DM pin of the USB connector
DP	18	A	I/O	V <sub>DD33</sub>	DP pin of the USB connector
ID	23	A	I/O	V <sub>DD33</sub>	Identification (ID) pin of the USB connector
N/C	8, 15, 16, 24, 25	—	—	—	No connection

**Table 5-1. Pin Functions (continued)**

PIN		A/D	TYPE	LEVEL	DESCRIPTION
NAME	NO.				
NXT	2	D	O	V <sub>DDIO</sub>	ULPI NXT output signal
REFCLK	1	A	I	3.3 V	V <sub>DD33</sub> Reference clock input (square-wave only). Tie to GND when pin 26 (CLOCK) is required to be Input mode. Connect to square-wave reference clock of amplitude in the range of 3 V to 3.6 V when Pin 26 (CLOCK) is required to be Output mode. See pin 14 (CFG) description for REFCLK input frequency settings.
RESETB	27	D	I	V <sub>DDIO</sub>	When low, all digital logic (except 32 kHz logic required for power up sequencing) including registers are reset to their default values, and ULPI bus is tri-stated. When high, normal USB operation.
STP	29	D	I	V <sub>DDIO</sub>	ULPI STP input signal
V <sub>BAT</sub>	21	A	power	V <sub>BAT</sub>	Input supply voltage or battery source
V <sub>BUS</sub>	22	A	power	V <sub>BUS</sub>	V <sub>BUS</sub> pin of the USB connector
V <sub>DD15</sub>	12	A	power		1.5 V internal LDO output. Connect to external filtering capacitor.
V <sub>DD18</sub>	28, 30	A	power	V <sub>DD18</sub>	External 1.8 V supply input. Connect to external filtering capacitor.
V <sub>DD33</sub>	20	A	power	V <sub>DD33</sub>	3.3 V internal LDO output. Connect to external filtering capacitor.
V <sub>DDIO</sub>	32	A	I	V <sub>DDIO</sub>	External 1.8 V supply input for digital I/Os. Connect to external filtering capacitor.
GND	Thermal Pad	A	power	—	Reference Ground

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

			MIN	MAX	UNIT
V <sub>CC</sub>	Main battery supply voltage <sup>(2)</sup>		0	5	V
	Voltage on any input <sup>(3)</sup>	Where supply represents the voltage applied to the power supply pin associated with the input	−0.3	1 × V <sub>CC</sub> + 0.3	V
	V <sub>BUS</sub> input		−2	20	V
	ID, DP, DM inputs	Stress condition guaranteed 24h	−0.3	5.25	V
V <sub>DDIO</sub>	IO supply voltage	Continuous		1.98	V
T <sub>A</sub>	Ambient temperature range		−40	85	°C
T <sub>J</sub>	Ambient temperature range	Absolute maximum rating	−40	150	°C
		For parametric compliance	−40	125	
	Ambient temperature for parametric compliance	With max 125°C as junction temperature	−40	85	°C
	DP, DM, ID high voltage short circuit	DP, DM or ID pins short circuited to V <sub>BUS</sub> supply, in any mode of TUSB1210 operation, continuously for 24 hours		5.25	V
	DP, DM, ID low voltage short circuit	DP, DM or ID pins short circuited to GND in any mode of TUSB1210 operation, continuously for 24 hours	0		V
T <sub>stg</sub>	Storage temperature range		−55	125	°C

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under [Section 6.3](#) is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The product will have negligible reliability impact if voltage spikes of 5.5 V occur for a total (cumulative over lifetime) duration of 5 milliseconds.
- (3) Except V<sub>BAT</sub> input, V<sub>BUS</sub>, ID, DP, and DM pads

### 6.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge (ESD) performance:	Human body model (HBM), per ANSI/ESDA/JEDEC JS001 <sup>(1)</sup>	±2000	V
		Charged device model (CDM), per JESD22-C101 or ANSI/ESDA/JEDEC JS-002 <sup>(2)</sup>	±500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
V <sub>BAT</sub>	Battery supply voltage		2.7	3.6	4.8	V
V <sub>BAT CERT</sub>	Battery supply voltage for USB 2.0 compliancy (USB 2.0 certification)	When V <sub>DD33</sub> is supplied internally	3.15			V
		When V <sub>DD33</sub> is shorted to V <sub>BAT</sub> externally	3.05			
V <sub>DDIO</sub>	Digital IO pin supply		1.71		1.98	V
T <sub>A</sub>	Ambient temperature range		−40		85	°C

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		RHB	UNIT
		(16 Pins)	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	34.72	°C/W
$R_{\theta JC(top)}$	Junction-to-case(top) thermal resistance	37.3	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	10.3	°C/W
$\Psi_{JT}$	Junction-to-top characterization parameter	0.5	°C/W
$\Psi_{JB}$	Junction-to-board characterization parameter	10.5	°C/W
$R_{\theta JC(bottom)}$	Junction-to-case(bottom) thermal resistance	3.6	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 6.5 Analog I/O Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		CONDITIONS	MIN	TYP	MAX	UNIT
<b>CPEN Output Pin</b>						
$V_{OL}$	CPEN low-level output voltage	$I_{OL} = 3 \text{ mA}$			0.3	V
$V_{OH}$	CPEN high-level output voltage	$I_{OH} = -3 \text{ mA}$	$V_{DD33} - 0.3$			V

## 6.6 Digital I/O Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
CLOCK						
V <sub>OL</sub>	Low-level output voltage	Frequency = 60 MHz, Load = 10 pF	0.45			V
V <sub>OH</sub>	High-level output voltage		V <sub>DDIO</sub> - 0.45			V
STP, DIR, NXT, DATA0 to DATA7						
V <sub>OL</sub>	Low-level output voltage	Frequency = 30 MHz, Load = 10 pF	0.45			V
V <sub>OH</sub>	High-level output voltage		V <sub>DDIO</sub> - 0.45			V

## 6.7 Digital IO Pins (Non-ULPI)

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>CS, CFG, RESETB Input Pins</b>						
$V_{IL}$	Maximum low-level input voltage				$0.35 \times V_{DDIO}$	V
$V_{IH}$	Minimum high-level input voltage		$0.65 \times V_{DDIO}$			V
<b>RESETB Input Pin Timing Spec</b>						
$t_{w(POR)}$	Internal power-on reset pulse width		0.2			μs
$t_{w(RESET)}$	External RESETB pulse width	Applied to external RESETB pin when CLOCK is toggling.	8			CLOCK cycles

## 6.8 PHY Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER			COMMENTS	MIN	TYP	MAX	UNIT
LS/FS Single-Ended Receivers							
	USB single-ended receivers						
SK <sub>WVP_VM</sub>	Skew between VP and VM		Driver outputs unloaded	−2	0	2	ns
V <sub>SE_HYS</sub>	Single-ended hysteresis			50			mV
V <sub>IH</sub>	High (driven)			2			V
V <sub>IL</sub>	Low					0.8	V
V <sub>TH</sub>	Switching threshold			0.8		2	V
LS/FS Differential Receiver							
V <sub>DI</sub>	Differential input sensitivity		Ref. USB2.0	200			mV
V <sub>CM</sub>	Differential Common mode range		Ref. USB2.0	0.8		2.5	V
LS Transmitter							
V <sub>OL</sub>	Low		Ref. USB2.0	0		300	mV
V <sub>OH</sub>	High (driven)		Ref. USB2.0	2.8		3.6	V
V <sub>CRS</sub>	Output signal crossover voltage		Ref. USB2.0, covered by eye diagram	1.3		2	V
t <sub>r</sub>	Rise time		Ref. USB2.0, covered by eye diagram	75		300	ns
t <sub>f</sub>	Fall time			75		300	ns
t <sub>FRFM</sub>	Differential rise and fall time matching			80%		125%	
t <sub>FDRATE</sub>	Low-speed data rate		Ref. USB2.0, covered by eye diagram	1.4775		1.5225	Mb/s
t <sub>DJ1</sub>	Source jitter total (including frequency tolerance)	To next transition	Ref. USB2.0, covered by eye diagram	−25		25	ns
t <sub>DJ2</sub>		For paired transitions		−10		10	
t <sub>FEOPT</sub>	Source SE0 interval of EOP		Ref. USB2.0, covered by eye diagram	1.25		1.5	μs
	Downstream eye diagram		Ref. USB2.0, covered by eye diagram				
V <sub>CM</sub>	Differential common mode range		Ref. USB2.0	0.8		2.5	V
FS Transmitter							
V <sub>OL</sub>	Low		Ref. USB2.0	0		300	mV
V <sub>OH</sub>	High (driven)		Ref. USB2.0	2.8		3.6	V
V <sub>CRS</sub>	Output signal crossover voltage		Ref. USB2.0, covered by eye diagram	1.3		2	V
t <sub>FR</sub>	Rise time		Ref. USB2.0	4		20	ns
t <sub>FF</sub>	Fall time		Ref. USB2.0	4		20	ns
t <sub>FRFM</sub>	Differential rise and fall time matching		Ref. USB2.0, covered by eye diagram	90%		111.11%	
Z <sub>DRV</sub>	Driver output resistance		Ref. USB2.0	28		44	Ω
T <sub>FDRATE</sub>	Full-speed data rate		Ref. USB2.0, covered by eye diagram	11.97		12.03	Mb/s
t <sub>DJ1</sub>	Source jitter total (including frequency tolerance)	To next transition	Ref. USB2.0, covered by eye diagram	−2		2	ns
t <sub>DJ2</sub>		For paired transitions		−1		1	
T <sub>FEOPT</sub>	Source SE0 interval of EOP		Ref. USB2.0, covered by eye diagram	160		175	ns
	Downstream eye diagram		Ref. USB2.0, covered by eye diagram				
	Upstream eye diagram						

## 6.8 PHY Electrical Characteristics (continued)

over operating free-air temperature range (unless otherwise noted)

PARAMETER		COMMENTS	MIN	TYP	MAX	UNIT
<b>HS Differential Receiver</b>						
VHSSQ	High-speed squelch detection threshold (differential signal amplitude)	Ref. USB2.0	100		150	mV
VHSDSC	High-speed disconnect detection threshold (differential signal amplitude)	Ref. USB2.0	525		625	mV
	High-speed differential input signaling levels	Ref. USB2.0, specified by eye pattern templates				mV
VHSCM	High-speed data signaling common mode voltage range (guidelines for receiver)	Ref. USB2.0	–50		500	mV
	Receiver jitter tolerance	Ref. USB2.0, specified by eye pattern templates			150	ps
<b>HS Transmitter</b>						
V <sub>H</sub> SOI	High-speed idle level	Ref. USB2.0	–10		10	mV
V <sub>H</sub> SOH	High-speed data signaling high	Ref. USB2.0	360		440	mV
V <sub>H</sub> SOL	High-speed data signaling low	Ref. USB2.0	–10		10	mV
VCHIRPJ	Chirp J level (differential voltage)	Ref. USB2.0	700		1100	mV
VCHIRPK	Chirp K level (differential voltage)	Ref. USB2.0	–900		–500	mV
t <sub>r</sub>	Rise Time (10% - 90%)	Ref. USB2.0, covered by eye diagram	500			ps
t <sub>f</sub>	Fall time (10% - 90%)	Ref. USB2.0, covered by eye diagram	500			ps
ZHSDRV	Driver output resistance (which also serves as high-speed termination)	Ref. USB2.0	40.5		49.5	Ω
THSDRAT	High-speed data range	Ref. USB2.0, covered by eye diagram	479.76		480.24	Mb/s
	Data source jitter	Ref. USB2.0, covered by eye diagram

<b>CEA-2011/UART Transceiver</b>						
	UART Transmitter CEA-2011					
t <sub>PH_UART_EDGE</sub>	Phone UART edge rates	DP_PULLDOWN asserted			1	Ms
V <sub>OH_SER</sub>	Serial interface output high	ISOURCE = 4 mA	2.4	3.3	3.6	V
V <sub>OL_SER</sub>	Serial interface output low	ISINK = –4 mA	0	0.1	0.4	V
	UART Receiver CEA-2011					
V <sub>IH_SER</sub>	Serial interface input high	DP_PULLDOWN asserted	2			V
V <sub>IL_SER</sub>	Serial interface input low	DP_PULLDOWN asserted			0.8	V
V <sub>TH</sub>	Switching threshold		0.8		2	V

## 6.9 Pullup/Pulldown Resistors

over operating free-air temperature range (unless otherwise noted)

PARAMETER		COMMENTS	MIN	TYP	MAX	UNIT
RPUI	Bus pullup resistor on upstream port (idle bus)	Bus idle	0.9	1.1	1.575	kΩ
RPUA	Bus pullup resistor on upstream port (receiving)	Bus driven/driver's outputs unloaded	1.425	2.2	3.09	
VIHZ	High (floating)	Pullups/pulldowns on both DP and DM lines	2.7		3.6	V
VPH_DP_UP	Phone D+ pullup voltage	Driver's outputs unloaded	3	3.3	3.6	V
	Pulldown resistors					
RPH_DP_DWN	Phone D+/- pulldown	Driver's outputs unloaded	14.25	18	24.8	kΩ
RPH_DM_DWN						
V <sub>IHZ</sub>	High (floating)	Pullups/pulldowns on both DP and DM lines	2.7		3.6	V
	D+/- Data line					
C <sub>INUB</sub>	Upstream facing port	[1.0]		22	75	pF
V <sub>OTG_DATA_LKG</sub>	On-the-go device leakage	[2]			0.342	V
Z <sub>INP</sub>	Input impedance exclusive of pullup/pulldown	Driver's outputs unloaded	300			kΩ

## 6.10 OTG Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		COMMENTS	MIN	TYP	MAX	UNIT
OTG V <sub>BUS</sub> Electrical						
<b>V<sub>BUS</sub> Comparators</b>						
VA_SESS_VLD	A-device session valid		0.8	1.4	2.0	V
VA_VBUS_VLD	A-device V <sub>BUS</sub> valid		4.4	4.5	4.625	V
VB_SESS_END	B-device session end		0.2	0.5	0.8	V
VB_SESS_VLD	B-device session valid		2.1	2.4	2.7	V
<b>V<sub>BUS</sub> Line</b>						
RA_BUS_IN	A-device V <sub>BUS</sub> input impedance to ground	SRP (V <sub>BUS</sub> pulsing) capable A-device not driving V <sub>BUS</sub>	40	70	100	kΩ
RB_SRP_DWN	B-device V <sub>BUS</sub> SRP pulldown	5.25 V / 8 mA, Pullup voltage = 3 V	0.656	10		kΩ
RB_SRP_UP	B-device V <sub>BUS</sub> SRP pullup	(5.25 V – 3 V) / 8 mA, Pullup voltage = 3 V	0.281	1	2	kΩ
t <sub>RISE_SRP_UP_MAX</sub>	B-device V <sub>BUS</sub> SRP rise time maximum for OTG-A communication	0 to 2.1 V with < 13 μF load	RV <sub>BUS</sub> = 0 Ω and R1KSERIES = '0'		31.4	ms
			RV <sub>BUS</sub> = 1000 Ω ±10% and R1KSERIES = '1'		57.8	
			RV <sub>BUS</sub> = 1200 Ω ±10% and R1KSERIES = '1'		64	
			RV <sub>BUS</sub> = 1800 Ω ±10% and R1KSERIES = '1'		85.4	

## 6.10 OTG Electrical Characteristics (continued)

over operating free-air temperature range (unless otherwise noted)

PARAMETER	COMMENTS	MIN	TYP	MAX	UNIT
$t_{\text{RISE\_SRP\_UP\_MIN}}$	B-device $V_{\text{BUS}}$ SRP rise time minimum for standard host connection	0.8 to 2 V with > 97 $\mu\text{F}$ load	$R_{\text{V\_BUS}} = 0 \Omega$ and $R1\text{KSERIES} = '0'$	46.2	ms
			$R_{\text{V\_BUS}} = 1000 \Omega \pm 10\%$ and $R1\text{KSERIES} = '1'$	96	
			$R_{\text{V\_BUS}} = 1200 \Omega \pm 10\%$ and $R1\text{KSERIES} = '1'$	100	
			$R_{\text{V\_BUS}} = 1800 \Omega \pm 10\%$ and $R1\text{KSERIES} = '1'$	100	

## 6.11 OTG ID Electrical

over operating free-air temperature range (unless otherwise noted)

PARAMETER		COMMENTS	MIN	TYP	MAX	UNIT
ID Comparators — ID External Resistors Specifications						
R_ID_GND	ID ground comparator	ID_GND interrupt	12	20	28	kΩ
R_ID_FLOAT	ID Float comparator	ID_FLOAT interrupt	200		500	kΩ
	ID Line					
R_PH_ID_UP	Phone ID pullup to VPH_ID_UP	ID unloaded (V_RUSB)	70	90	286	kΩ

$t_{PLL}$	PLL lock time		300		$\mu$ s

### 6.14.1 Timing Parameter Definitions

The timing parameter symbols used in the timing requirement and switching characteristic tables are created in accordance with JEDEC Standard 100. To shorten the symbols, some pin names and other related terminologies have been abbreviated as shown in [Table 6-2](#).

**Table 6-2. Timing Parameter Definitions**

LOWERCASE SUBSCRIPTS	
SYMBOL	PARAMETER
C	Cycle time (period)
D	Delay time
Dis	Disable time
En	Enable time
H	Hold time
Su	Setup time
START	Start bit
T	Transition time
V	Valid time
W	Pulse duration (width)
X	Unknown, changing, or don't care level
H	High
L	Low
V	Valid
IV	Invalid
AE	Active edge
FE	First edge
LE	Last edge
Z	High impedance

### 6.14.2 Interface Target Frequencies

[Table 6-3](#) assumes testing over the recommended operating conditions.

**Table 6-3. TUSB1210 Interface Target Frequencies**

IO INTERFACE	INTERFACE DESIGNATION		TARGET FREQUENCY 1.5 V
USB	Universal serial bus	High speed	480 Mbits/s
		Full speed	12 Mbits/s
		Low speed	1.5 Mbits/s

## 6.15 Typical Characteristics

**Figure 6-2. High-Speed Eye Diagram**

**Figure 6-3. Full-Speed Eye Diagram**

## 7 Detailed Description

### 7.1 Overview

The TUSB1210 is a USB2.0 transceiver chip, designed to interface with a USB controller through a ULPI interface. It supports all USB2.0 data rates High-Speed, Full-Speed, and Low-Speed. Compliant to Host and Peripheral (OTG) modes. It additionally supports a UART mode and legacy ULPI serial modes. TUSB1210 Integrates a 3.3-V LDO, which makes it flexible to work with either battery operated systems or pure 3.3 V supplied systems. Also, it has an integrated PLL Supporting 2 Clock Frequencies 19.2 MHz/26 MHz. The ULPI clock pin (60 MHz) supports input and output clock configurations. TUSB1210 has low power consumption, optimized for portable devices, and complete USB OTG Physical Front-End that supports Host Negotiation Protocol (HNP) and Session Request Protocol (SRP).

TUSB1210 is optimized to be interfaced through a 12-pin SDR UTMI Low Pin Interface (ULPI), supporting both input clock and output clock modes, with 1.8 V interface supply voltage.

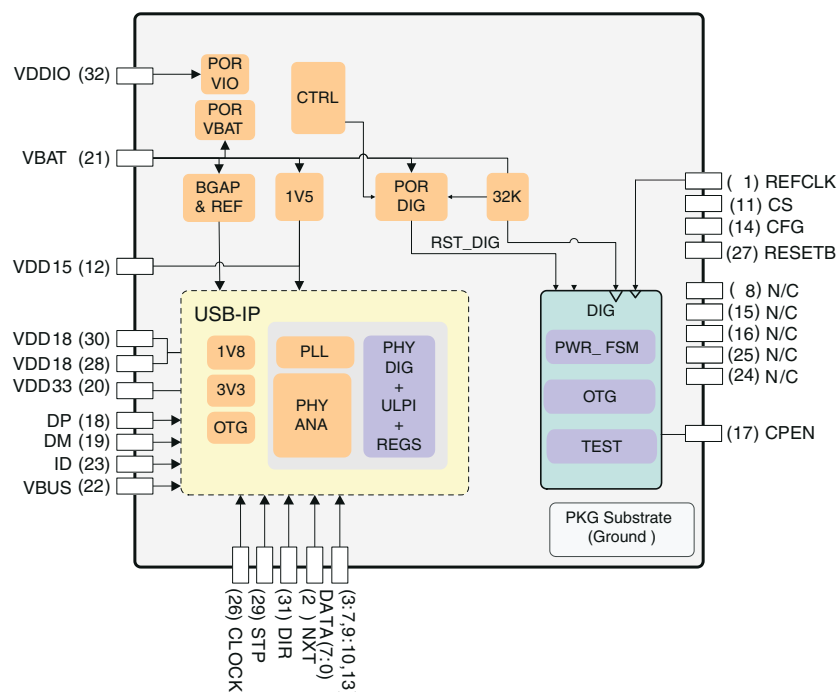

TUSB1210 integrates a 3.3 V LDO, which makes it flexible to work with either battery operated systems or pure 3.3 V supplied systems. Both the main supply and the 3.3 V power domain can be supplied through an external switched-mode converter for optimized power efficiency.

TUSB1210 includes a POR circuit to detect supply presence on  $V_{BAT}$  and  $V_{DDIO}$  pins. TUSB1210 can be disabled or configured in low power mode for energy saving.

TUSB1210 is protected against accidental shorts to 5 V or ground on its exposed interface (DP/DM/ID). It is also protected against up to 20 V surges on  $V_{BUS}$ .

TUSB1210 integrates a high-performance low-jitter 480 MHz PLL and supports two clock configurations. Depending on the required link configuration, TUSB1210 supports both ULPI input and output clock mode: input clock mode, in which case a square-wave 60 MHz clock is provided to TUSB1210-Q1 at the ULPI interface CLOCK pin; and output clock mode in which case TUSB1210 can accept a square-wave reference clock at REFCLK of either 19.2 MHz, 26 MHz. Frequency is indicated to TUSB1210 via the configuration pin CFG. This can be useful if a reference clock is already available in the system.

### 7.2 Functional Block Diagram

## 7.3 Feature Description

### 7.3.1 Processor Subsystem

#### 7.3.1.1 Clock Specifications

##### 7.3.1.1.1 USB PLL Reference Clock

The USB PLL block generates the clocks used to synchronize:

- The ULPI interface (60 MHz clock)
- The USB interface (depending on the USB data rate, 480 Mbps, 12 Mbps, or 1.5 Mbps)

TUSB1210 requires an external reference clock which is used as an input to the 480 MHz USB PLL block. Depending on the clock configuration, this reference clock can be provided either at REFCLK pin or at CLOCK pin. By default CLK pin is configured as an input.

Two clock configurations are possible:

- Input clock configuration (see [Section 7.3.1.1.2](#))
- Output clock configuration (see [Section 7.3.1.1.3](#))

##### 7.3.1.1.2 ULPI Input Clock Configuration

In this mode, REFCLK must be externally tied to GND. CLOCK remains configured as an input.

When the ULPI interface is used in input clock configuration, that is, the 60 MHz ULPI clock is provided to TUSB1210 on Clock pin, then this is used as the reference clock for the 480 MHz USB PLL block. See [Section 6.13](#).

##### 7.3.1.1.3 ULPI Output Clock Configuration

In this mode, a reference clock must be externally provided on the REFCLK pin. When an input clock is detected on the REFCLK pin, then CLK is automatically changed to an output. For example, 60 MHz ULPI clock is the TUSB1210 devices output on the CLK pin.

Two reference clock input frequencies are supported. REFCLK input frequency is communicated to TUSB1210 through a configuration pin, CFG. See  $f_{REFCLK}$  in [Table 8-3](#) for frequency correspondence. TUSB1210 supports square-wave reference clock input only. Reference clock input must be square-wave of amplitude in the range 3 V to 3.6 V. See [Section 6.13](#).

##### 7.3.1.1.4 Clock 32 kHz

An internal clock generator running at 32 kHz has been implemented to provide a low-speed, low-power clock to the system See [Section 7.3.1.1.4](#).

##### 7.3.1.1.5 Reset

All logic is reset if CS = 0 or  $V_{BAT}$  are not present.

All logic (except 32 kHz logic) is reset if  $V_{DDIO}$  is not present.

PHY logic is reset when any supplies are not present ( $V_{DDIO}$ ,  $V_{DD15}$ ,  $V_{DD18}$ , and  $V_{DD33}$ ) or if RESETB pin is low.

TUSB1210 may be reset manually by toggling the RESETB pin to GND for at least 200 ns.

If manual reset through RESETB is not required, then RESETB pin may be tied to  $V_{DDIO}$  permanently.

#### 7.3.1.2 USB Transceiver

The TUSB1210 device includes a universal serial bus (USB) on-the-go (OTG) transceiver that supports USB 480 Mb/s high-speed (HS), 12 Mb/s full-speed (FS), and USB 1.5 Mb/s low-speed (LS) through a 12-pin UTMI+ low pin interface (ULPI).

---

**Note**

LS device mode is not allowed by a USB2.0 HS capable PHY, therefore it is not supported by TUSB1210. This is stated in USB2.0 standard Chapter 7, page 119, second paragraph: “A *high-speed capable upstream facing transceiver must not support low-speed signaling mode.*” There is also some related commentary in Chapter 7.1.2.3.

---

**7.3.1.2.1 PHY Electrical Characteristics**

The PHY is the physical signaling layer of the USB 2.0. It essentially contains all the drivers and receivers required for physical data and protocol signaling on the DP and DM lines.

The PHY interfaces to the USB controller through a standard 12-pin digital interface called UTMI+ low pin interface (ULPI).

The transmitters and receivers inside the PHY are classified into two main classes.

- The full-speed (FS) and low-speed (LS) transceivers. These are the legacy USB1.x transceivers.
- The HS (HS) transceivers

To bias the transistors and run the logic, the PHY also contains reference generation circuitry which consists of:

- A DPLL which does a frequency multiplication to achieve the 480-MHz low-jitter lock necessary for USB and also the clock required for the switched capacitor resistance block.
- A switched capacitor resistance block which is used to replicate an external resistor on chip.

Built-in pullup and pulldown resistors are used as part of the protocol signaling.

Apart from this, the PHY also contains circuitry which protects it from accidental 5-V short on the DP and DM lines.

**7.3.1.2.1.1 LS/FS Single-Ended Receivers**

In addition to the differential receiver, there is a single-ended receiver (SE–, SE+) for each of the two data lines D+/. The main purpose of the single-ended receivers is to qualify the D+ and D– signals in the full-speed/low-speed modes of operation. See [Section 6.8](#).

**7.3.1.2.1.2 LS/FS Differential Receiver**

A differential input receiver (Rx) retrieves the LS/FS differential data signaling. The differential voltage on the line is converted into digital data by a differential comparator on DP/DM. This data is then sent to a clock and data recovery circuit which recovers the clock from the data. An additional serial mode exists in which the differential data is directly output on the RXRCV pin. See [Section 6.13](#).

**7.3.1.2.1.3 LS/FS Transmitter**

The USB transceiver (Tx) uses a differential output driver to drive the USB data signal D+/. onto the USB cable. The driver's outputs support 3-state operation to achieve bidirectional half-duplex transactions. See [Section 6.13](#).

**7.3.1.2.1.4 HS Differential Receiver**

The HS receiver consists of the following blocks:

A differential input comparator to receive the serial data

- A squelch detector to qualify the received data
- An oversampler-based clock data recovery scheme followed by a NRZI decoder, bit unstuffing, and serial-to-parallel converter to generate the ULPI DATAOUT

See [Section 6.13](#).

#### 7.3.1.2.1.5 HS Differential Transmitter

The HS transmitter is always operated via the ULPI parallel interface. The parallel data on the interface is serialized, bit stuffed, NRZI encoded, and transmitted as a dc output current on DP or DM depending on the data. Each line has an effective 22.5  $\Omega$  load to ground, which generates the voltage levels for signaling.

A disconnect detector is also part of the HS transmitter. A disconnect on the far end of the cable causes the impedance seen by the transmitter to double thereby doubling the differential amplitude seen on the DP/DM lines of [Section 6.13](#).

#### 7.3.1.2.1.6 UART Transceiver

In this mode, the ULPI data bus is redefined as a 2-pin UART interface, which exchanges data through a direct access to the FS/LS analog transmitter and receiver. See [Section 6.13](#).

**Figure 7-1. USB UART Data Flow**

#### 7.3.1.2.2 OTG Characteristics

The on-the-go (OTG) block integrates three main functions:

- The USB plug detection function on  $V_{BUS}$  and ID
- The ID resistor detection
- The  $V_{BUS}$  level detection

See [Section 6.10](#).

## 7.4 Device Functional Modes

### 7.4.1 TUSB1210 Modes vs ULPI Pin Status

Table 7-1, Table 7-2, and Table 7-3 show the status of each of the 12 ULPI pins including input or output direction and whether output pins are driven to '0' or to '1', or pulled up or pulled down through the internal pullup or pulldown resistors.

Note that pullup or pulldown resistors are automatically replaced by driven '1'/'0' levels respectively once internal IORST is released, with the exception of the pullup on STP which is maintained in all modes.

Pin assignment changes in ULPI 3-pin serial mode, ULPI 6-pin serial mode, and UART mode. Unused pins are tied low in these modes as shown below.

**Table 7-1. TUSB1210 Modes vs ULPI Pin Status:ULPI Synchronous Mode Power-Up**

		ULPI SYNCHRONOUS MODE POWER-UP

## 7.5.5 FUNC\_CTRL

ADDRESS OFFSET	0x04		
PHYSICAL ADDRESS	0x04	INSTANCE	USB_SCUSB
DESCRIPTION	Controls UTMI function settings of the PHY.		
TYPE			
WRITE LATENCY			

7	6	5	4	3	2	1	0
Reserved	SUSPENDM	RESET	OPMODE		TERMSELECT	XCVRSELECT	

BITS	FIELD NAME	DESCRIPTION	TYPE	RESET
7	Reserved		R	0
6	SUSPENDM	Active low PHY suspend. Put PHY into Low Power Mode. In Low Power Mode the PHY power down all blocks except the full speed receiver, OTG comparators, and the ULPI interface pins. The PHY automatically set this bit to '1' when Low Power Mode is exited.	RW	1
5	RESET	Active high transceiver reset. Does not reset the ULPI interface or ULPI register set.  Once set, the PHY asserts the DIR signal and reset the UTMI core. When the reset is completed, the PHY de-asserts DIR and clears this bit. After de-asserting DIR, the PHY re-assert DIR and send an RX command update.  Note: This bit is auto-cleared, this explain why it can't be read at '1'.	RW	0
4:03	OPMODE	Select the required bit encoding style during transmit 0x0: Normal operation 0x1: Non-driving 0x2: Disable bit-stuff and NRZI encoding 0x3: Reserved (No SYNC and EOP generation feature not supported)	RW	0x0
2	TERMSELECT	Controls the internal 1.5KΩs pull-up resistor and 45Ωs HS terminations. Control over bus resistors changes depending on XcvtSelect, OpMode, DpPulldown and DmPulldown.	RW	0

BITS	FIELD NAME	DESCRIPTION	TYPE	RESET
1:00	XCVRSELECT	Select the required transceiver speed. 0x0: Enable HS transceiver 0x1: Enable FS transceiver 0x2: Enable LS transceiver 0x3: Enable FS transceiver for LS packets (FS preamble is automatically pre-pended)	RW	0x1

### 7.5.6 FUNC\_CTRL\_SET

ADDRESS OFFSET	0x05		
PHYSICAL ADDRESS	0x05	INSTANCE	USB_SCUSB
DESCRIPTION	This register does not physically exist. It is the same as the func_ctrl register with read/set-only property (write '1' to set a particular bit, a write '0' has no-action).		
TYPE	RW		
WRITE LATENCY			

7	6	5	4	3	2	1	0

### 7.5.8 IFC\_CTRL

<b>ADDRESS OFFSET</b>	0x07		
<b>PHYSICAL ADDRESS</b>	0x07	<b>INSTANCE</b>	USB_SCUSB
<b>DESCRIPTION</b>	Enables alternative interfaces and PHY features.		
<b>TYPE</b>			
<b>WRITE LATENCY</b>			

7	6	5	4	3	2	1	0
INTERFACE_PROTECT_DISABLE	INDICATORPASSTHRU	INDICATORCOMPLEMENT	AUTORESUME	CLOCKSUSPENDM	CARKITMODE	FSLSSERIALMODE_3PIN	FSLSSERIALMODE_6PIN

BITS	FIELD NAME	DESCRIPTION	TYPE	RESET
7	INTERFACE_PROTECT_DISABLE	Controls circuitry built into the PHY for protecting the ULPI interface when the link tri-states stp and data. 0b: Enables the interface protect circuit 1b: Disables the interface protect circuit	RW	0
6	INDICATORPASSTHRU	Controls whether the complement output is qualified with the internal vbusvalid comparator before being used in the VBUS State in the RXCMD. 0b: Complement output signal is qualified with the internal VBUSVALID comparator. 1b: Complement output signal is not qualified with the internal VBUSVALID comparator.	RW	0
5	INDICATORCOMPLEMENT	Tells the PHY to invert EXTERNALVBUSINDICATOR input signal, generating the complement output. 0b: PHY will not invert signal EXTERNALVBUSINDICATOR (default) 1b: PHY will invert signal EXTERNALVBUSINDICATOR	RW	0
4	AUTORESUME	Enables the PHY to automatically transmit resume signaling. Refer to USB specification 7.1.7.7 and 7.9 for more details. 0 = AutoResume disabled 1 = AutoResume enabled (default)	RW	1
3	CLOCKSUSPENDM	Active low clock suspend. Valid only in Serial Modes. Powers down the internal clock circuitry only. Valid only when SuspendM = 1b. The PHY must ignore ClockSuspend when SuspendM = 0b. By default, the clock will not be powered in Serial and Carkit Modes. 0b : Clock will not be powered in Serial and UART Modes. 1b : Clock will be powered in Serial and UART Modes.	RW	0
2	CARKITMODE	Changes the ULPI interface to UART interface. The PHY automatically clear this field when UART mode is exited. 0b: UART disabled. 1b: Enable serial UART mode.	RW	0
1	FSLSSERIALMODE_3PIN	Changes the ULPI interface to 3-pin Serial. The PHY must automatically clear this field when serial mode is exited. 0b: FS/LS packets are sent using parallel interface 1b: FS/LS packets are sent using 4-pin serial interface	RW	0
0	FSLSSERIALMODE_6PIN	Changes the ULPI interface to 6-pin Serial. The PHY must automatically clear this field when serial mode is exited. 0b: FS/LS packets are sent using parallel interface 1b: FS/LS packets are sent using 6-pin serial interface	RW	0

### 7.5.9 IFC\_CTRL\_SET

<b>ADDRESS OFFSET</b>	0x08		
<b>PHYSICAL ADDRESS</b>	0x08	<b>INSTANCE</b>	USB_SCUSB
<b>DESCRIPTION</b>	This register does not physically exist. It is the same as the ifc_ctrl register with read/set-only property (write '1' to set a particular bit, a write '0' has no-action).		
<b>TYPE</b>			
<b>WRITE LATENCY</b>			

7	6	5	4	3	2	1	0

## 7.5.11 OTG\_CTRL

<b>ADDRESS OFFSET</b>	0x0A		
<b>PHYSICAL ADDRESS</b>	0x0A	<b>INSTANCE</b>	USB_SCUSB
<b>DESCRIPTION</b>	Controls UTMI+ OTG functions of the PHY.		
<b>TYPE</b>			
<b>WRITE LATENCY</b>			

7	6	5	4	3	2	1	0
USEEXTERNALVBUSINDICATOR	DRVVBUSEXT ERNAL	DRVVBUS	CHRGVBUS	DISCHRGVBUS	DMPULLDOWN	DPPULLDOWN	IDPULLUP

BITS	FIELD NAME	DESCRIPTION	TYPE	RESET
7	USEEXTERNALVBUSINDICATOR	Tells the PHY to use an external VBUS over-current indicator. 0b: Use the internal OTG comparator (VA_VBUS_VLD) or internal VBUS valid indicator (default) 1b: Use external VBUS valid indicator signal.	RW	0
6	DRVVBUSEXT ERNAL	Selects between the internal and the external 5 V VBUS supply. 0b: Pin17 (CPEN) is disabled (output GND level). TUSB1210 does not support internal VBUS supply. 1b: Pin17 (CPEN) is set to '1' (output VDD33 voltage level) if DRVVBUS bit is '1', else Pin17 (CPEN) is disabled (output GND level) if DRVVBUS bit is '0'	RW	0
5	DRVVBUS	VBUS output control bit 0b : do not drive VBUS 1b : drive 5V on VBUS Note: Both DRVVBUS and DRVVBUSEXT ERNAL bits must be set to 1 in order to set Pin17 (CPEN). CPEN pin can be used to enable an external VBUS supply	RW	0
4	CHRGVBUS	Charge VBUS through a resistor. Used for VBUS pulsing SRP. The Link must first check that VBUS has been discharged (see DischrgVbus register bit), and that both D+ and D- data lines have been low (SE0) for 2ms. 0b : do not charge VBUS 1b : charge VBUS	RW	0
3	DISCHRGVBUS	Discharge VBUS through a resistor. If the Link sets this bit to 1, it waits for an RX CMD indicating SessEnd has transitioned from 0 to 1, and then resets this bit to 0 to stop the discharge. 0b : do not discharge VBUS 1b : discharge VBUS	RW	0
2	DMPULLDOWN	Enables the 15k Ohm pull-down resistor on D-. 0b : Pull-down resistor not connected to D-. 1b : Pull-down resistor connected to D-.	RW	1
1	DPPULLDOWN	Enables the 15k Ohm pull-down resistor on D+. 0b : Pull-down resistor not connected to D+. 1b : Pull-down resistor connected to D+.	RW	1
0	IDPULLUP	Connects a pull-up to the ID line and enables sampling of the signal level. 0b : Disable sampling of ID line. 1b : Enable sampling of ID line.	RW	0

## 7.5.12 OTG\_CTRL\_SET

<b>ADDRESS OFFSET</b>	0x0B		
<b>PHYSICAL ADDRESS</b>	0x0B	<b>INSTANCE</b>	USB_SCUSB

BITS	FIELD NAME	DESCRIPTION	TYPE	RESET
7	Reserved		R	0
6	Reserved		R	0
5	Reserved		R	0
4	IDGND	Current value of UTMI+ IdGnd output. This bit is not updated if IdPullup bit is reset to 0 and for 50 ms after IdPullup is set to 1.	R	0
3	SESEND	Current value of UTMI+ SessEnd output.	R	0
2	SESSVALID	Current value of UTMI+ SessValid output. SessValid is the same as UTMI+ AValid.	R	0
1	VBUSVALID	Current value of UTMI+ VbusValid output.	R	0
0	HOSTDISCONNECT	Current value of UTMI+ Hostdisconnect output. Applicable only in host mode. Automatically reset to 0 when Low Power Mode is entered. NOTE: Reset value is '0' when host is connected. Reset value is '1' when host is disconnected.	R	0

## 7.5.21 USB\_INT\_LATCH

<b>ADDRESS OFFSET</b>	0x14		
<b>PHYSICAL ADDRESS</b>	0x14	<b>INSTANCE</b>	USB_SCUSB
<b>DESCRIPTION</b>	<p>These bits are set by the PHY when an unmasked change occurs on the corresponding internal signal. The PHY will automatically clear all bits when the Link reads this register, or when Low Power Mode is entered. The PHY also clears this register when Serial Mode or CarKit Mode is entered regardless of the value of ClockSuspendM. The PHY follows the rules defined in Table 26 of the ULPI spec for setting any latch register bit. It is important to note that if register read data is returned to the Link in the same cycle that a USB Interrupt Latch bit is to be set, the interrupt condition is given immediately in the register read data and the Latch bit is not set.</p> <p>Note that it is optional for the Link to read the USB Interrupt Latch register in Synchronous Mode because the RX CMD byte already indicates the interrupt source directly</p>		
<b>TYPE</b>	R		
<b>WRITE LATENCY</b>			

7	6	5	4	3	2	1	0

## 8 Application and Implementation

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 8.1 Application Information

Figure 8-1 shows the suggested application diagram (Host or OTG, ULPI input-clock mode).

### 8.2 Typical Application

#### 8.2.1 Host or OTG, ULPI Input Clock Mode Application

Figure 8-1 shows a suggested application diagram for TUSB1210 in the case of ULPI input-clock mode (60 MHz ULPI clock is provided by link processor), in Host or OTG application. Note: this is just one example, it is of course possible to operate as HOST or OTG while also in ULPI output-clock mode.

- Pin 11 (CS): can be tied high to V<sub>IO</sub> if the CS\_OUT pin is unavailable; Pin 14 (CFG): tie-high is *do not care* since the ULPI clock is used in input mode
- Pin 1 (REFCLK): must be tied low
- Ext 3 V supply supported
- Pin 27 (RESETB) can be tied to V<sub>DDIO</sub> if unused.
- Pins labeled N/C (no-connect) are truly no-connect, and can be tied or left floating.

**Figure 8-1. Host or OTG, ULPI Input Clock Mode Application Diagram**

### 8.2.1.1 Design Requirements

Table 8-1. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
$V_{BAT}$	3.3 V
$V_{DDIO}$	1.8 V
$V_{BUS}$	5.0 V
USB Support	HS, FS, LS
USB On the Go (OTG)	Yes
Clock Sources	60 MHz Clock

### 8.2.1.2 Detailed Design Procedure

Connect the TUSB1210 device as is shown in [Figure 8-1](#).

Follow the Board Guidelines in the [TUSB121x USB2.0 Board Guidelines](#) application report.

#### 8.2.1.2.1 Unused Pins Connection

- **VBUS:** Input. Recommended to tie to GND if unused. However, leaving  $V_{BUS}$  floating is also acceptable since internally there is an 80 k $\Omega$  resistance to ground.
- **REFCLK:** Input. If REFCLK is unused and 60 MHz clock is provided by MODEM (60 MHz should be connected to CLOCK pin in this case), then tie REFCLK to GND.
- **CFG:** Tie to GND if REFCLK is 19.2 MHz, or tie to  $V_{DDIO}$  if REFCLK is 26 MHz. Tie to either GND or  $V_{DDIO}$  (does not matter which) if REFCLK is not used (for example, ULPI input clock configuration).

### 8.2.1.3 Application Curve

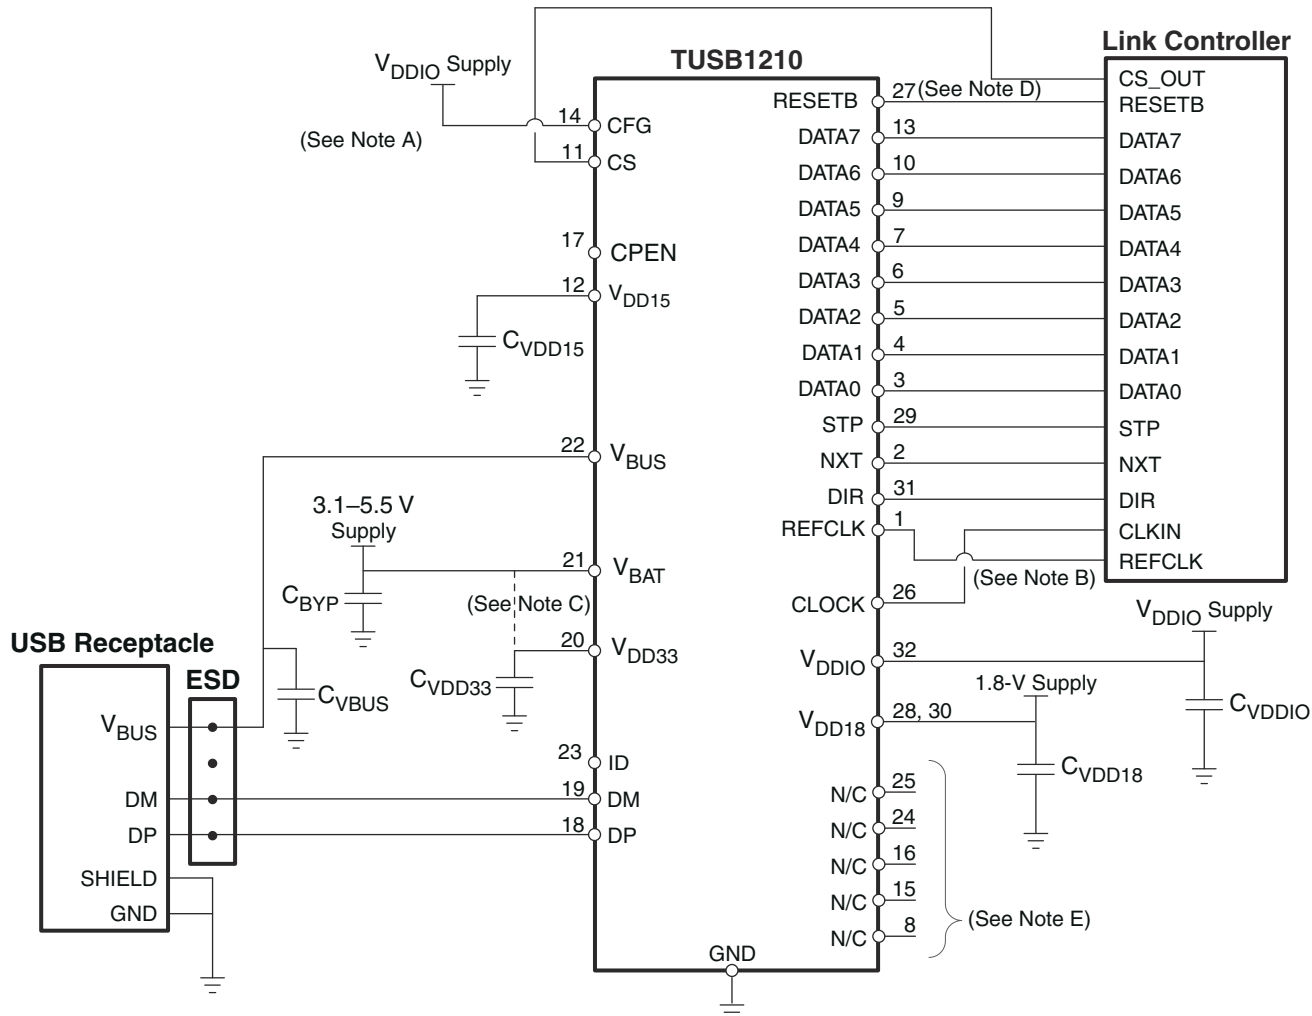

Figure 8-2. High-Speed Eye Diagram

## 8.2.2 Device, ULPI Output Clock Mode Application

Figure 8-3 shows a suggested application diagram for TUSB1210 in the case of ULPI output clock mode (60 MHz ULPI clock is provided by TUSB1210, while link processor or another external circuit provides REFCLK), in Device mode application. Note: this is just one example, it is of course possible to operate as Device while also in ULPI input-clock mode. Refer also to Figure 8-1.

- A. Pin 11 (CS): can be tied high to  $V_{IO}$  if CS\_OUT pin unavailable; Pin 14 (CFG): Tied to  $V_{DDIO}$  for 26 MHz REFCLK mode here, tie to GND for 19.2 MHz mode.
- B. Pin 1 (REFCLK): connect to external 3.3 V square-wave reference clock
- C. Ext 3 V supply supported
- D. Pin 27 (RESETB) can be tied to  $V_{DDIO}$  if unused.
- E. Pins labeled N/C (no-connect) are truly no-connect, and can be tied or left floating.

**Figure 8-3. Device, ULPI Output Clock Mode Application Diagram**

### 8.2.2.1 Design Requirements

Table 8-2. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
$V_{BAT}$	3.3 V
$V_{DDIO}$	1.8 V
$V_{BUS}$	5.0 V
USB Support	HS, FS, LS
Clock Sources	26 MHz or 19.2 MHz Oscillator

### 8.2.2.2 Detailed Design Procedure

Connect the TUSB1210 device as is shown in [Figure 8-3](#).

Follow the Board Guidelines in the [TUSB121x USB2.0 Board Guidelines](#) application report.

#### 8.2.2.2.1 Unused Pins Connection

- **ID:** Input. Leave floating if unused or TUSB1210 is Device mode only. Tie to GND through  $R_{ID} < 1\text{ k}\Omega$  if Host mode.
- **REFCLK:** Input. If REFCLK is unused, and 60 MHz clock is provided by MODEM (60 MHz should be connected to CLOCK pin in this case) then tie REFCLK to GND.
- **CFG:** Tie to GND if REFCLK is 19.2 MHz, or tie to  $V_{DDIO}$  if REFCLK is 26 MHz. Tie to either GND or  $V_{DDIO}$  (does not matter which) if REFCLK not used (for example, ULPI input clock configuration).

### 8.2.2.3 Application Curve

Figure 8-4. Full-Speed Eye Diagram

## 8.3 External Components

**Table 8-3. TUSB1210 External Components**

FUNCTION	COMPONENT	REFERENCE	VALUE	NOTE	LINK
V <sub>DDIO</sub>	Capacitor	CVDDIO	100 nF	Suggested value, application dependent	<a href="#">Figure 8-1</a>
V <sub>DD33</sub>	Capacitor	CVDD33	2.2 $\mu$ F	Range: [0.45 $\mu$ F: 6.5 $\mu$ F] , ESR = [0: 600 m $\Omega$ ] for f > 10 kHz	<a href="#">Figure 8-1</a>
V <sub>DD15</sub>	Capacitor	CVDD15	2.2 $\mu$ F	Range: [0.45 $\mu$ F: 6.5 $\mu$ F] , ESR = [0: 600 m $\Omega$ ] for f > 10 kHz	<a href="#">Figure 8-1</a>

VBUS – OTG	Capacitor	CVBUS	4.7 $\mu$ F	Range: 1.0 $\mu$ F to 6.5 $\mu$ F	<a href="#">Figure 8-1</a>

## 9 Power Supply Recommendations

$V_{BUS}$ ,  $V_{BAT}$ , and  $V_{DDIO}$  are needed to power the TUSB1210. Recommended operation is for  $V_{BAT}$  to be present before  $V_{DDIO}$ . Applying  $V_{DDIO}$  before  $V_{BAT}$  to TUSB1210 is not recommended as there is a diode from  $V_{DDIO}$  to  $V_{BAT}$  which will be forward biased when  $V_{DDIO}$  is present but  $V_{BAT}$  is not present. TUSB1210 does not strictly require  $V_{BUS}$  to function.

### 9.1 TUSB1210 Power Supply

- The  $V_{DDIO}$  pins of the TUSB1210 supply 1.8 V (nominal) power to the core of the TUSB1210. This power rail can be isolated from all other power rails by a ferrite bead to reduce noise.
- The  $V_{BAT}$  pin of the TUSB1210 supply 3.3 V (nominal) power rail to the TUSB1210. This power rail can be isolated from all other power rails by a ferrite bead to reduce noise.
- The  $V_{BUS}$  pin of the TUSB1210 supply 5.0 V (nominal) power rail to the TUSB1210. This pin is normally connected to the  $V_{BUS}$  pin of the USB connector.
- The  $V_{BUS}$  pin of the TUSB1210 supply 5.0 V (nominal) power rail to the TUSB1210. This pin is normally connected to the  $V_{BUS}$  pin of the USB connector.

### 9.2 Ground

It is recommended that almost one board ground plane be used in the design. This provides the best image plane for signal traces running above the plane. An earth or chassis ground is implemented only near the USB port connectors on a different plane for EMI and ESD purposes.

### 9.3 Power Providers

Table 9-1 is a summary of TUSB1210 power providers.

**Table 9-1. Power Providers<sup>(1)</sup>**

NAME	USAGE	TYPE	TYPICAL VOLTAGE (V)	MAXIMUM CURRENT (mA)
$V_{DD15}$	Internal	LDO	1.5	50
$V_{DD18}$	External	LDO	1.8	30
$V_{DD33}$	Internal	LDO	3.1	15

- (1)  $V_{DD33}$  may be supplied externally or by shorting the  $V_{DD33}$  pin to  $V_{BAT}$  pin, provided  $V_{BAT}$  minimum is in range [3.2 V: 3.6 V]. Note that the  $V_{DD33}$  LDO will always power-on when the chip is enabled, irrespective of whether  $V_{DD33}$  is supplied externally or not. In the case the  $V_{DD33}$  pin is not supplied externally in the application, the electrical specifications for this LDO are provided below.

### 9.4 Power Modules

#### 9.4.1 $V_{DD33}$ Regulator

The  $V_{DD33}$  internal LDO regulator powers the USB PHY, charger detection, and OTG functions of the USB subchip inside TUSB1210. Section 6.12 describes the regulator characteristics.

$V_{DD33}$  regulator takes its power from  $V_{BAT}$ .

Since the USB2.0 standard requires data lines to be biased with pullups biased from a supply greater than 3 V, and since  $V_{DD33}$  regulator has an inherent voltage drop from its input,  $V_{BAT}$ , to its regulated output, TUSB1210 will not meet USB 2.0 Standard if operated from a battery whose voltage is lower than 3.3 V.

#### 9.4.2 $V_{DD18}$ Supply

The  $V_{DD18}$  supply is powered externally at the  $V_{DD18}$  pin. See Table 8-3 for external components.

#### 9.4.3 $V_{DD15}$ Regulator

The  $V_{DD15}$  internal LDO regulator powers the USB subchip inside TUSB1210. Section 6.12 describes the regulator characteristics.

## 9.5 Power Consumption

Table 9-2 describes the power consumption depending on the use cases.

### Note

The typical power consumption is obtained in the nominal operating conditions and with the TUSB1210 standalone.

**Table 9-2. Power Consumption**

MODE	CONDITIONS	SUPPLY	TYPICAL CONSUMPTION	UNIT
OFF Mode	$V_{BAT} = 3.6\text{ V}$ , $V_{DDIO} = 1.8\text{ V}$ , $V_{DD18} = 1.8\text{ V}$ , $CS = 0\text{ V}$	$I_{VBAT}$	8	$\mu\text{A}$
		$I_{VDDIO}$	3	
		$I_{VDD18}$	5	
		$I_{TOTAL}$	16	
Suspend Mode	$V_{BUS} = 5\text{ V}$ , $V_{BAT} = 3.6\text{ V}$ , $V_{DDIO} = 1.8\text{ V}$ , No clock	$I_{VBAT}$	204	$\mu\text{A}$
		$I_{VDDIO}$	3	
		$I_{VDD18}$	3	
		$I_{TOTAL}$	210	
HS USB Operation (Synchronous Mode)	$V_{BAT} = 3.6\text{ V}$ , $V_{DDIO} = 1.8\text{ V}$ , $V_{DD18} = 1.8\text{ V}$ , active USB transfer	$I_{VBAT}$	24.6	mA
		$I_{VDDIO}$	1.89	
		$I_{VDD18}$	21.5	
		$I_{TOTAL}$	48	
FS USB Operation (Synchronous Mode)	$V_{BAT} = 3.6\text{ V}$ , $V_{DDIO} = 1.8\text{ V}$ , active USB transfer	$I_{VBAT}$	25.8	mA
		$I_{VDDIO}$	1.81	
		$I_{VDD18}$	4.06	
		$I_{TOTAL}$	31.7	
Reset Mode	$RESETB = 0\text{ V}$ , $V_{BUS} = 5\text{ V}$ , $V_{BAT} = 3.6\text{ V}$ , $V_{DDIO} = 1.8\text{ V}$ , No clock	$I_{VBAT}$	237	$\mu\text{A}$
		$I_{VDDIO}$	3	
		$I_{VDD18}$	3	
		$I_{TOTAL}$	243	

## 10 Layout

### 10.1 TUSB121x USB2.0 Product Family Board Layout Recommendations

**Table 10-1. TUSB121x USB2.0 Product Family Board Layout Recommendations**

Item	USB General Considerations
1.00	USB design requires symmetrical termination and symmetrical component placement along the DP and DM paths.
1.01	Place the USB host controller and major components on the unrouted board first.
1.02	Place the USB host controller, as close as possible to the transceiver device, that is, ULPI interface traces as short as possible.
1.03	Route high-speed clock and high-speed USB. Route differential pairs first. Since these signals are critical and long length traces are to be avoided, it is therefore recommended to route DP/DM before routing less critical signals on the board. A similar recommendation is true for CLK, and ULPI signals which should be routed with equalized trace length.
1.04	Maintain maximum possible distance between high-speed clocks/periodic signals to high speed USB differential pairs and any connector leaving the PCB (such as I/O connectors, control, and signal headers or power connectors).
1.05	Place the USB receptacle at the board edge.
1.06	Maximum TI-recommended external capacitance on DP (or DM) lines is 4 pF <ul style="list-style-type: none"> <li>This capacitance is the sum of all external discrete components, that is, the total capacitance on DP (or DM) lines including trace capacitance can be larger than 4 pF.</li> <li>All discrete components should be placed as close as possible to the USB receptacle.</li> </ul>
1.07	Place the low-capacitance ESD protections as close as possible to the USB receptacle, with no other external devices in between.
1.08	Common mode chokes degrade signal quality, thus they should only be used if EMI performance enhancement is absolutely necessary.
1.09	Place the common mode choke (if required to improve EMI performance) as close as possible to the USB receptacle (but after one or more of the ESD devices).
<b>USB Interface (DP, DM)</b>	
2.00	Separate signal traces into similar categories and route similar signal traces together, that is, DP/DM and ULPI.
2.01	Route the USB receptacle ground pin to the analog ground plane of the device with multiple via connections.
2.02	Route the DP/DM trace pair together.
2.03	For HS-capable devices, route the DP/DM signals from the device to the USB receptacle with an optimum trace length of 5 cm. Maximum trace length 1-way delay of 0.5 ns (7.5 cm for 67 ps/cm in FR-3).
2.04	Match the DP/DM trace lengths. Maximum mismatch allowable is 150 mils ( $\approx 0.4$ cm).
2.05	Route the DP/DM signals with $90\ \Omega$ differential impedance, and $22.5\approx 30\text{-}\Omega$ common-mode impedance (objective is to have $Z_{\text{odd}} \approx Z_0 = Z_{\text{diff}}/2 = 45\ \Omega$ ).
2.06	Use an impedance calculator to determine the trace width and spacing required for the specific board stack up being used.
2.07	Keep the maximum possible distance between DP and DM signals from the other platform clocks, power sources and digital or analog signals.
2.08	Do not route DP/DM signals over or under crystals, oscillators, clock synthesizers, magnetic devices, or ICs that use clocks.
2.09	Avoid changing the routing layer for DP/DM traces. If unavoidable, use multiple vias.
2.10	Minimize bends and corners on DP/DM traces.
2.11	When it becomes necessary to turn $90^\circ$ , use two $45^\circ$ turns or an arc instead of making a single $90^\circ$ turn. This reduces reflections on the signal by minimizing impedance discontinuities.

**Table 10-1. TUSB121x USB2.0 Product Family Board Layout Recommendations (continued)**

Item	USB General Considerations
2.12	Avoid creating stubs on the DP/DM traces as stubs cause signal reflections and affect global signal quality.
2.13	If stubs are unavoidable, they must be less than 200 mils ( $\approx 0.5$ cm).
2.14	Route DP/DM signals over continuous VCC or GND planes, without interruption, avoiding crossing anti-etch (plane splits), which increase both inductance and radiation levels by introducing a greater loop area.
2.15	Route DP/DM signals with at least 25 mils ( $\approx 0.65$ mm) away from any plane splits.
2.16	Follow the 20×h thumb rule by keeping traces at least 20×(height above the plane) away from the edge of the plane (V <sub>CC</sub> or GND, depending on the plane the trace is over).
2.17	Changing signal layers is preferable to crossing plane splits if a choice must be made.
2.18	If crossing a plane split is completely unavoidable, proper placement of stitching capacitors can minimize the adverse effects on EMI and signal quality performance caused by crossing the split.
2.19	Avoid anti-etch on the ground plane.
	<b>ULPI Interface (ULPIDATA&lt;7:0&gt;, ULPICLK, ULPINXT, ULPIDIR, ULPSTP)</b>
3.00	Route ULPI 12-pin bus as a 50 $\Omega$ single-ended adapted bus.
3.01	Route ULPI 12-pin bus with minimum trace lengths and a strict maximum of 90 mm, to ensure timing. (Timing budget 600 ps maximum 1-way delay assuming 66 ps/cm.)
3.02	Route ULPI 21-pin bus equalizing paths lengths as much as possible to have equal delays.
3.03	Route ULPI 12-pin bus as clock signals and set a minimum spacing of 3 times the trace width ( $S < 3W$ ).
3.04	If the 3W minimum spacing is not respected, the minimum spacing for clock signals based on EMI testing experience is 50 mils (1.27 mm).
3.05	Route ULPI 12-pin bus with a dedicated ground plane.
3.06	Place and route the ULPI monitoring buffers as close as possible from the device ULPI bus (on test boards).
	<b>USB Clock (USBCLKIN, CLK_IN1, CLK_IN0)</b>
4.00	Route the USB clock with the minimum possible trace length.
4.01	Keep the maximum possible distance between the USB clock and the other platform clocks, power sources, and digital and analog signals.
4.02	Route the USBCLKIN, CLK_IN1 and CLK_IN0 inputs as 50 $\Omega$ single-ended signals.
	<b>USB Power Supply (VBUS, REG3V3, REG1V5, VBAT)</b>
5.00	VBUS must be a power plane from the device VBUS ball to the USB receptacle, or if a power plan is not possible, VBUS must be as large as possible.
5.01	Power signals must be wide to accommodate current level.

## 10.2 Layout Guidelines

- The  $V_{DDIO}$  pins of the TUSB1210 supply 1.8 V (nominal) power to the core of the TUSB1210. This power rail can be isolated from all other power rails by a ferrite bead to reduce noise.
- The  $V_{BAT}$  pin of the TUSB1210 supply 3.3 V (nominal) power rail to the TUSB1210. This power rail can be isolated from all other power rails by a ferrite bead to reduce noise.
- The  $V_{BUS}$  pin of the TUSB1210 supply 5 V (nominal) power rail to the TUSB1210. This pin is normally connected to the  $V_{BUS}$  pin of the USB connector.
- All power rails require 0.1  $\mu$ F decoupling capacitors for stability and noise immunity. The smaller decoupling capacitors should be placed as close to the TUSB1210 power pins as possible with an optimal grouping of two of differing values per pin.

## 11 Device and Documentation Support

### 11.1 Device Support

### 11.2 Documentation Support

[SLLZ066](#) **Silicon Errata**. Describes the known exceptions to the functional specifications for the TUSB1210-Q1.

#### 11.2.1 Related Documentation

For related documentation, see the following:

- Texas Instruments, [TUSB121x USB2.0 Board Guidelines application report](#)

### 11.3 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](#). Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 11.4 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 11.5 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 11.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 11.7 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

## PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package   Pins	Package qty   Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
<a href="#">TUSB1210BRHBR</a>	Active	Production	VQFN (RHB)   32	3000   LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 85	T1210B
TUSB1210BRHBR.A	Active	Production	VQFN (RHB)   32	3000   LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 85	T1210B

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
