

How to Modify a 4-Channel TPS7H4001QEVM-CVAL Into a 2-Channel EVM

Christian Yots

ABSTRACT

This document outlines the procedures required to convert a TPS7H4001QEVM-CVAL, a 4-channel quadrature phase buck converter evaluation module shown in [Figure 1](#), into a 2-channel buck converter EVM.

1 Introduction

The TPS7H4001-SP is a radiation-hardness-assured, 7-V, 18-A synchronous buck converter. Operation of the device is demonstrated on the [TPS7H4001EVM-CVAL Evaluation Module User's Guide](#), which contains a single buck converter capable of supplying 18-A of load current. A key feature of the TPS7H4001-SP is that it supports parallel operation easily allowing four buck converters to operate in quadrature phase and deliver up to 72-A of load current to a tightly regulated line. Parallel operation is demonstrated on the [TPS7H4001QEVM-CVAL Evaluation Module User's Guide](#).

As different applications call for unique load current requirements even within a single system, users may wish to evaluate these different applications with the same hardware, avoiding multiple hardware purchases. This document provides instructions on how to do just that; specifically, listing the modifications required on the 4-Channel EVM in order to realize a 2-channel design. Note, this application report is part of a series of reports showing how to convert 4-channel to 1-channel, 4-channel to 2-channel, and 4-channel to 3-channel designs. Please refer to other documents if 1-channel or 3-channel designs are desired.

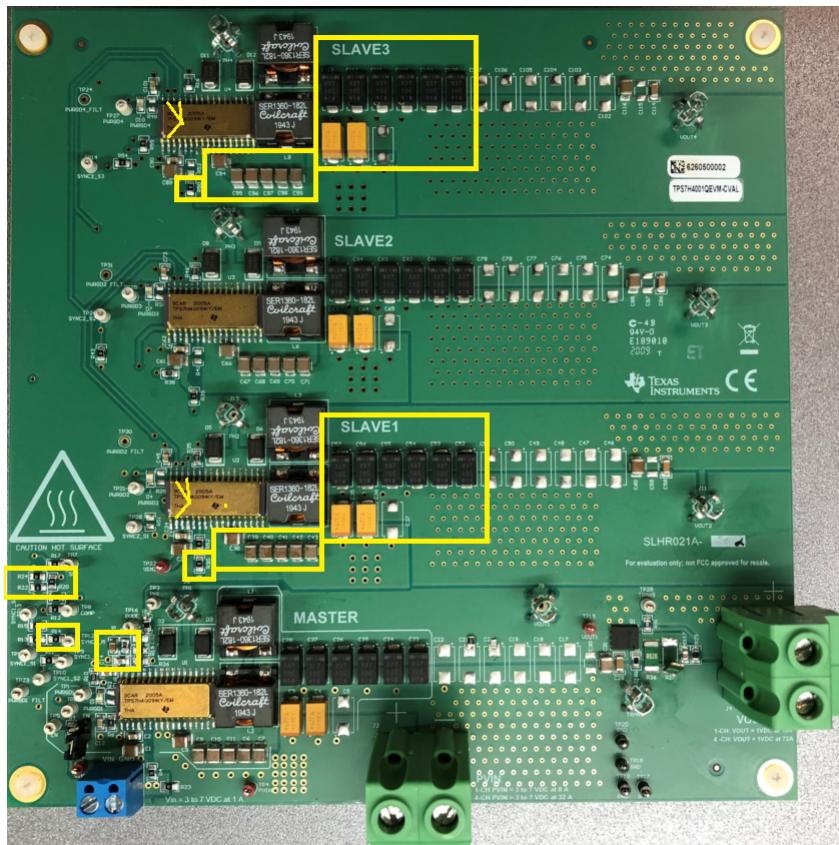

Figure 1. TPS7H4001QEVM-CVAL

2 BOM Modifications Required

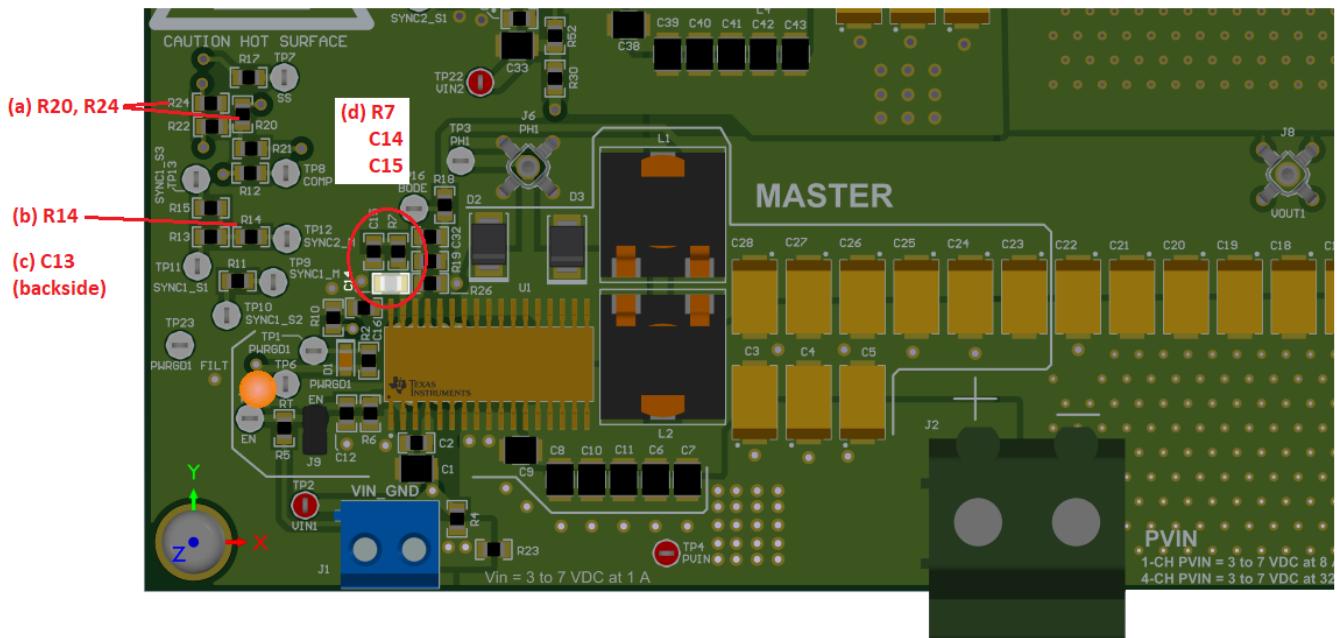

The following steps must be taken to ensure proper operation of a 2-channel buck converter on a populated 4-channel EVM (TPS7H4001QEVM-CVAL). An overview of where changes are required is shown in [Figure 2](#) while a summary of all changes is provided in [Table 1](#).

Figure 2. Overview Of Required Modifications

1. Modifications near MASTER DUT U1 ([Figure 3](#) and [Figure 8](#))
 - a. Isolate VSENSE feedback pins 32 of SLAVE1 and SLAVE3 by removing 0-ohm jumpers R20 and R24, respectively.
 - b. Isolate SYNC2 pin 6 of slave devices by removing 0-ohm jumper R14
 - c. Replace soft start capacitor, C13, with 22nF to keep soft start at 2ms.
 - d. Replace compensation circuit at R7, C14, C15 near DUT U1:
 - i. R7=6.04kohms
 - ii. C15=18nF
 - iii. C14=180pF

Figure 3. Modifications Near MASTER DUT U1

2. Modifications near SLAVE1 DUT U2 (Figure 4 and Figure 9)
 - a. Isolate VIN pin 4 of Slave 1 DUT U2 by removing 0-ohm jumper R30
 - b. Remove input capacitors of Slave 1 DUT U2 by completely removing, or lifting one terminal of each capacitor as shown in Figure 5. (C35, C36, C38, C39, C40, C41, C42, C43)
 - c. Remove output capacitors of Slave 1 DUT U2 by completely removing, or lifting one terminal of each capacitor so as to remove from circuit as shown in Figure 5. (C52, C53, C54, C55, C56, C57, C58, C60)
 - d. Using a solder iron and tweezers, carefully lift the following pins off the PCB as shown in Figure 6 (note only pins 31 and 33 are shown in graphic)
 - i. Enable pin (EN pin2)
 - ii. Soft start pin (SS/TR pin31)
 - iii. COMP pin (COMP pin 33)

Figure 4. Modifications near SLAVE1 DUT U2

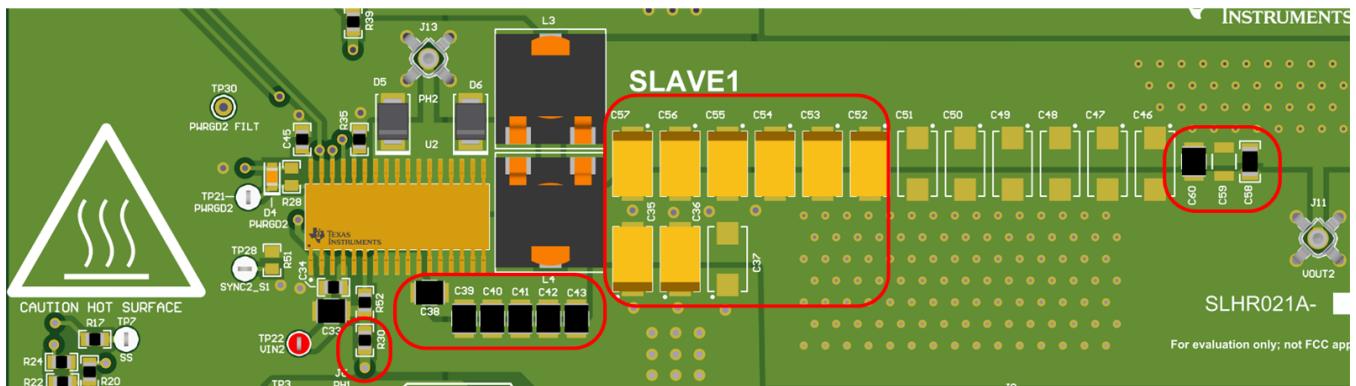

Figure 5. Open Circuit Input/Output Capacitors

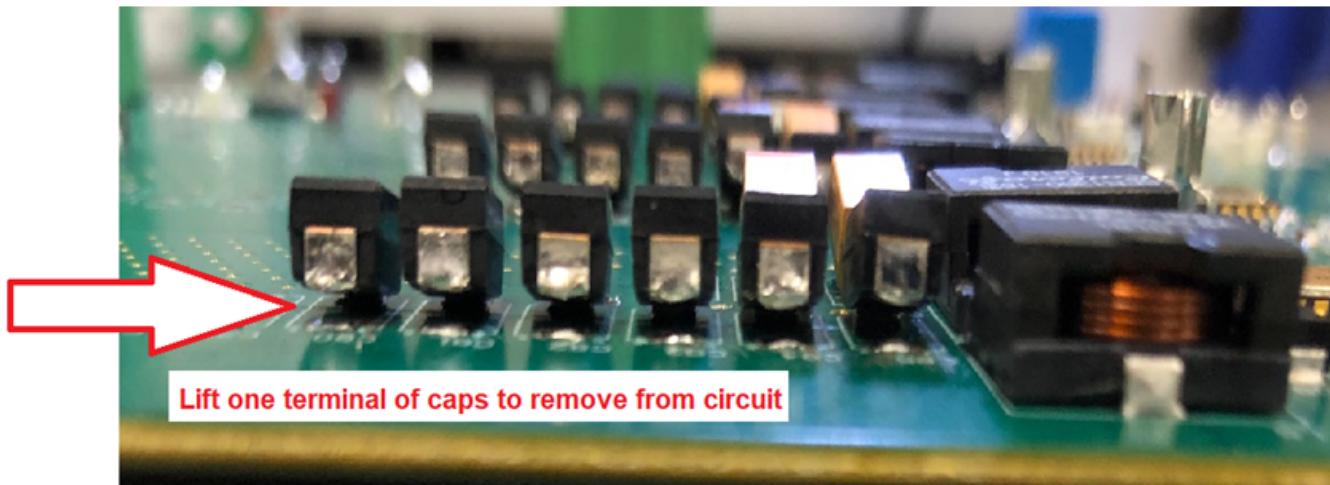

Figure 6. Lift Pins 2, 31, 33 from PCB

3. Modifications near SLAVE3 DUT U4 (Figure 7 and Figure 11)
 - a. Isolate VIN pin 4 of Slave 3 DUT U4 by removing 0-ohm jumper R50
 - b. Remove input capacitors of Slave 3 DUT 4 by completely removing, or lifting one terminal of each capacitor as shown in Figure 5. (C91, C92, C94, C95, C96, C97, C98, C99)
 - c. Remove output capacitors of Slave 3 DUT U4 by completely removing, or lifting one terminal of each capacitor so as to remove from circuit as shown in Figure 5. (C108, C109, C110, C111, C112, C113, C114, C116)
 - d. Using a solder iron and tweezers, carefully lift the following pins off the PCB as shown in Figure 6 (note only pins 31 and 33 are shown in graphic)
 - i. Enable pin (EN pin2)
 - ii. Soft start pin (SS/TR pin31)
 - iii. COMP pin (COMP pin 33)

5 Summary

Implementing the EVM modifications described in this document will allow users of a 4-channel TPS7H4001QEVM-CVAL evaluation module to realize dual channel operation.
