9.8~13.5-V Input, 46-V 300-W Output Interleave Boost Reference Design

Description

This reference design is a 300-W power output interleaving combination of two Boost converters using LM5155 controller. Each converter outputs continuous 150-W and 200-W peak. A LMC555 circuit generates 150k-Hz square wave signal and its anti-phase signal for synchronous clock for the two LM5155, making two converters working with 180° phase shift, which helps reduce the output voltage ripple. An amplifier samples input current of the two converters, outputs error signal V_C to control slave phase to share current with master phase. There is only 4.6°C temperature difference between two phases in the thermal result, good current sharing is achieved. Efficiency of the design is higher than 91% at 400-W peak output. Peak to peak ripple is within 250-mV during 200-W to 400-W transient. The design shows a valid way to expand the output power by paralleling two Boost converters.

An IMPORTANT NOTICE at the end of this TI reference design addresses authorized use, intellectual property matters and other important disclaimers and information.

1 Test Prerequisites

1.1 Voltage and Current Requirements

Table 1. Voltage and Current Requirements

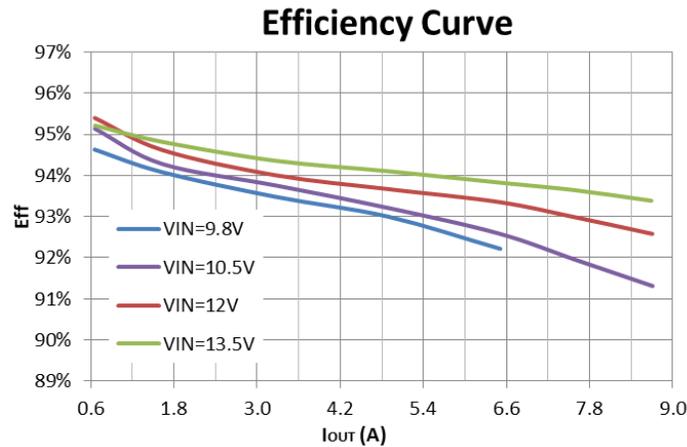

PARAMETER	SPECIFICATIONS
Input Voltage	9.8~13.5 Vdc
Output Voltage	46 Vdc
Continuous Output Current	6.5A
Peak Output Current	8.75 A @ ($V_{IN}=10.5\sim 13.5V$)

1.2 Required Equipment

- Multi-meter (current): Fluke 287C
- Multi-meter (voltage): Fluke 287C
- DC Source: Chroma 62006P-100-50
- E-Load: Chroma 63105A module
- Oscilloscope: Tektronix DPO3054,
- Electrical Thermography: Fluke TiS65

2.3 Load Regulation

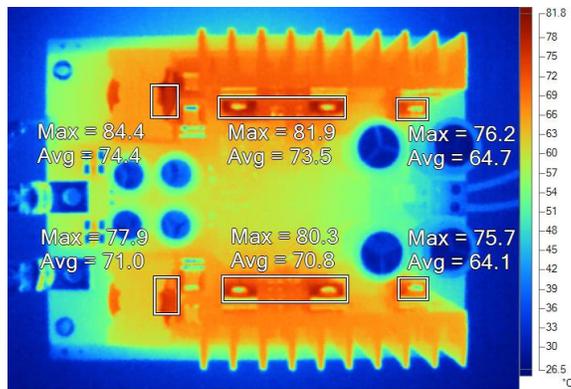

2.4 Thermal Images

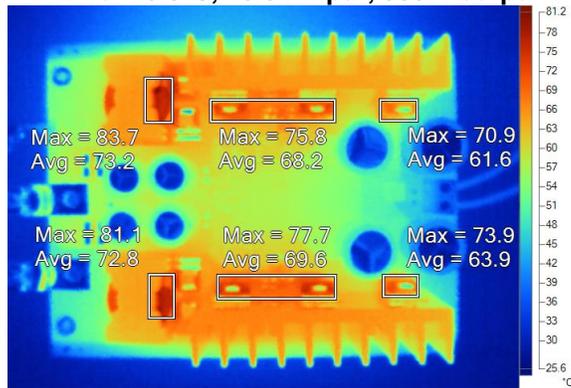

Note: 2-oz copper, tested after 20min operation, open frame and without fan cooling.

Ta=25.0°C, 12V input, 300W output

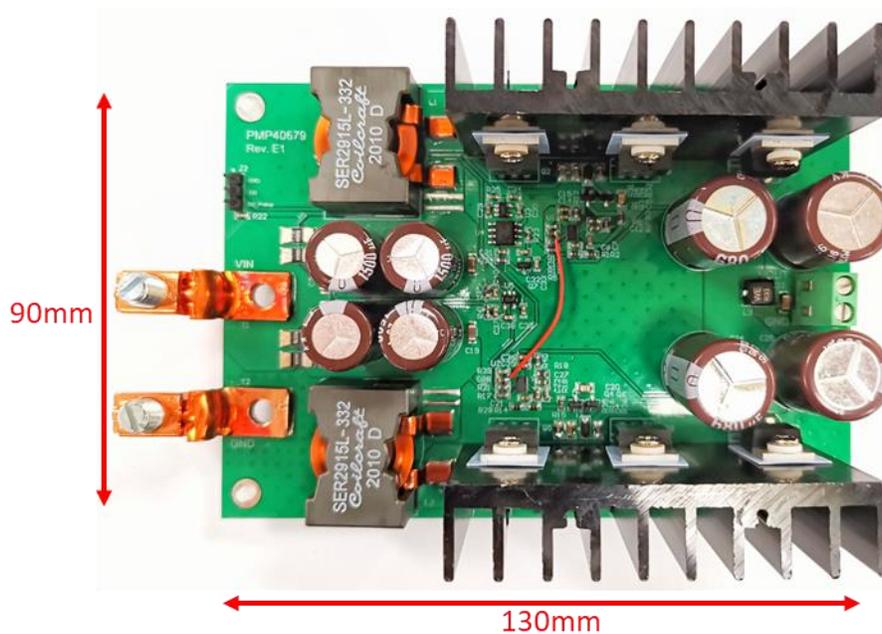

Ta=25.0°C, 13.5V input, 300W output

2.5 Dimensions

The dimension of this board is 130mm 90mm (width)*40mm (height).

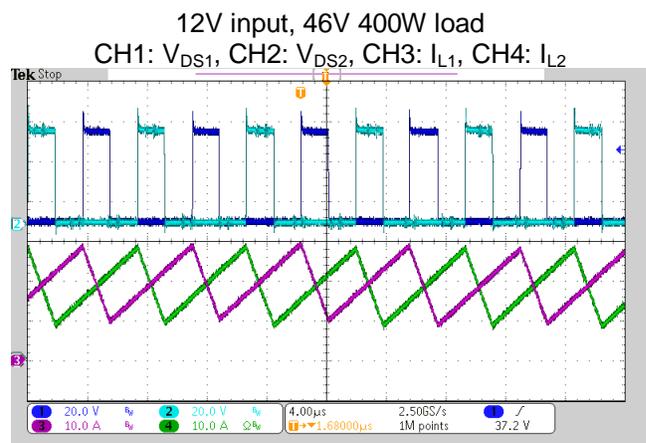

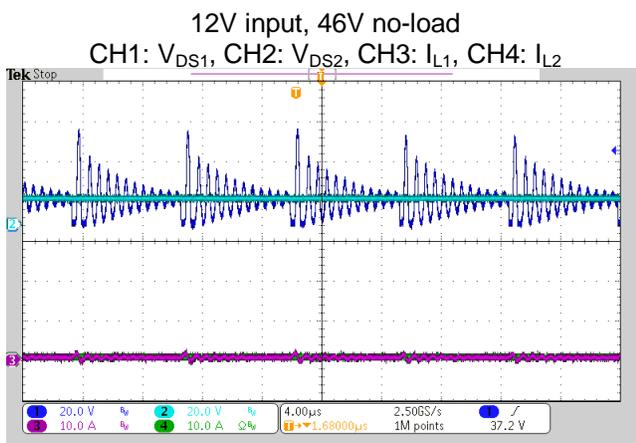

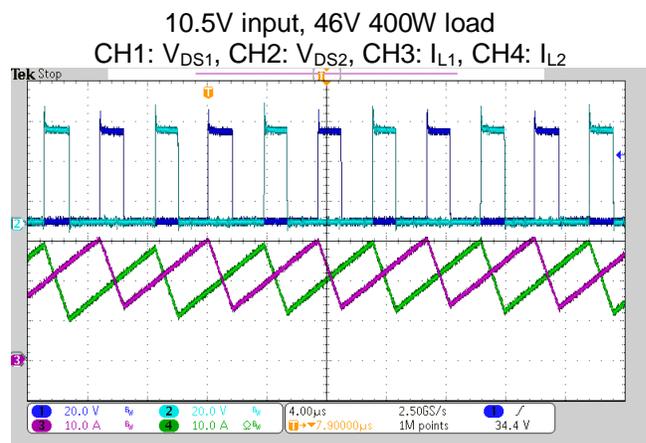

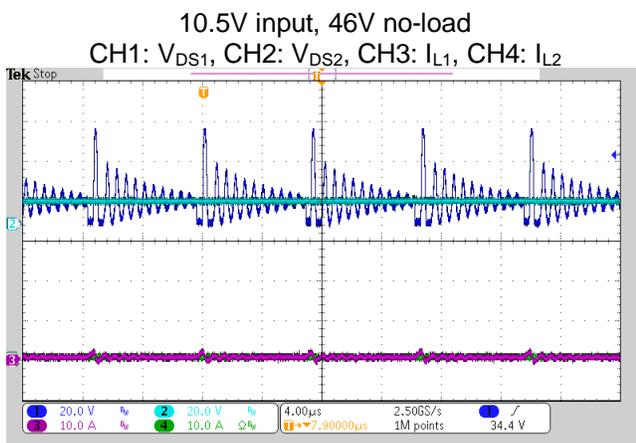

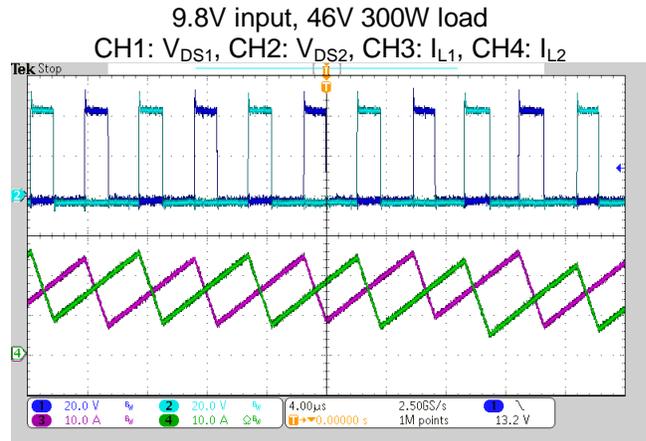

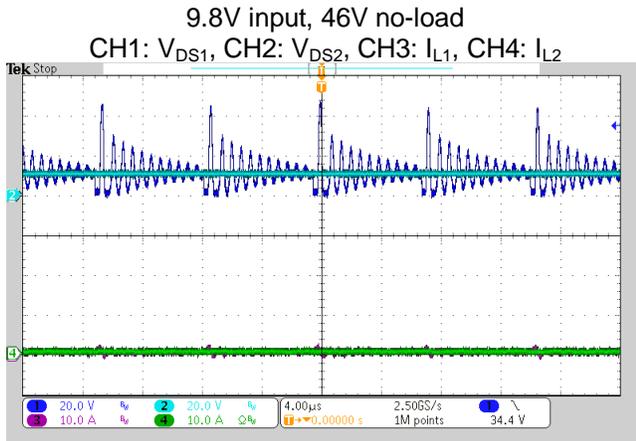

Note: Test done on E1 PCB, E2 only modify the connection of SS pins on E1.

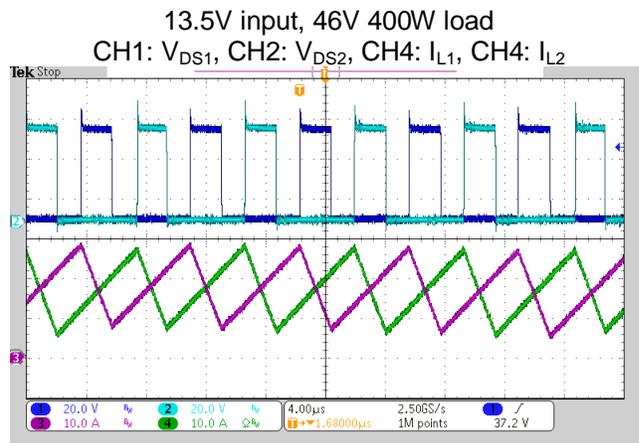

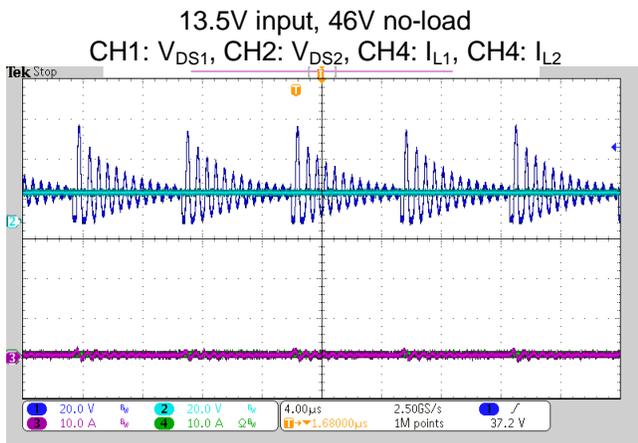

3 Waveforms

3.1 Switching

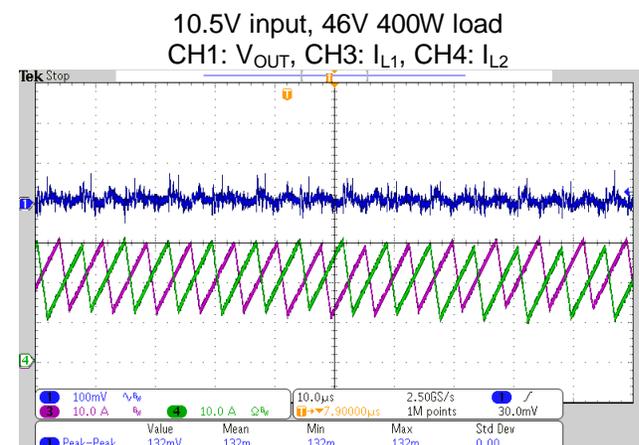

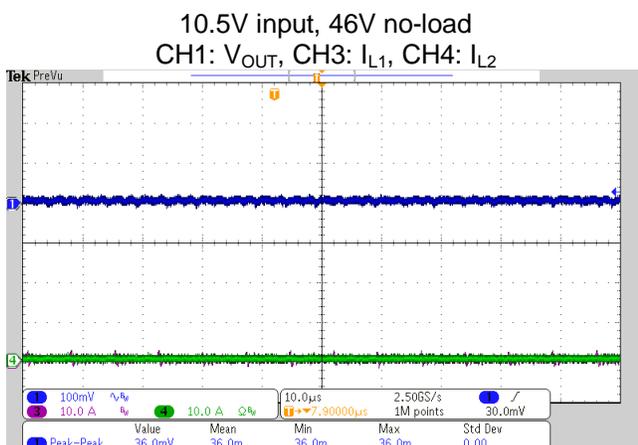

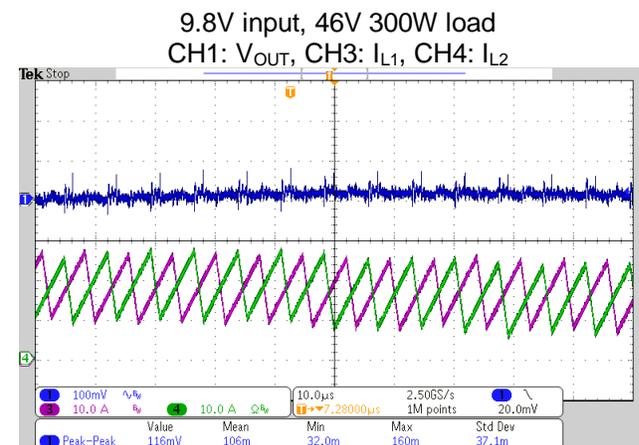

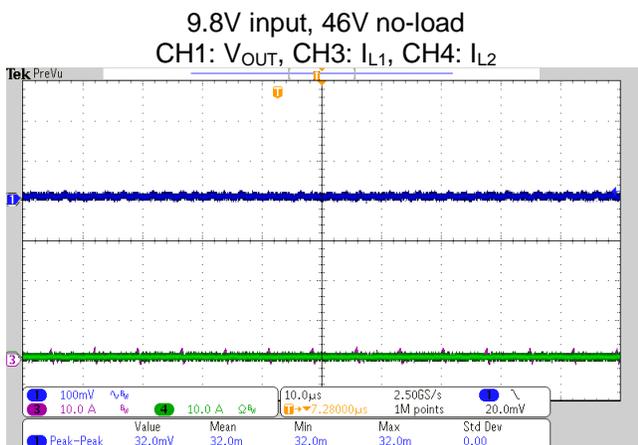

The waveforms of switching nodes at no load and full load condition are shown in following pictures.

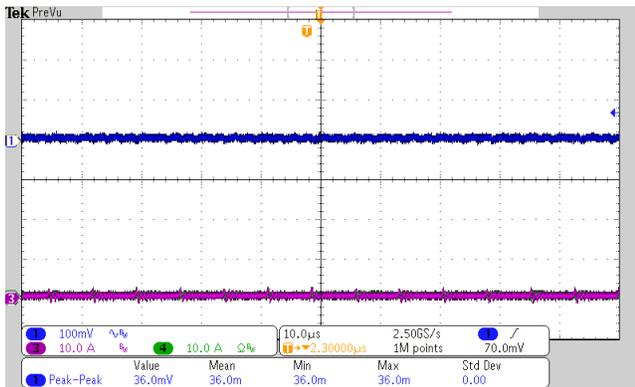

3.2 Output Voltage Ripple

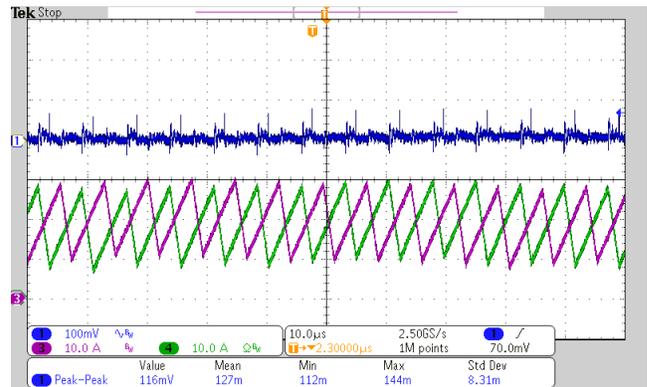

The waveforms of output AC ripples at no load and full load condition are shown in following pictures.

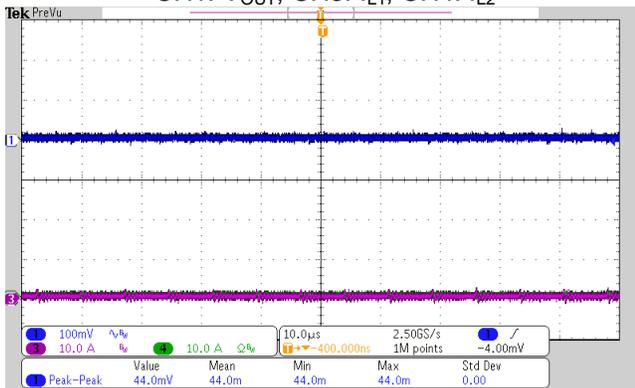

12V input, 46V no-load
CH1: V_{OUT}, CH3: I_{L1}, CH4: I_{L2}

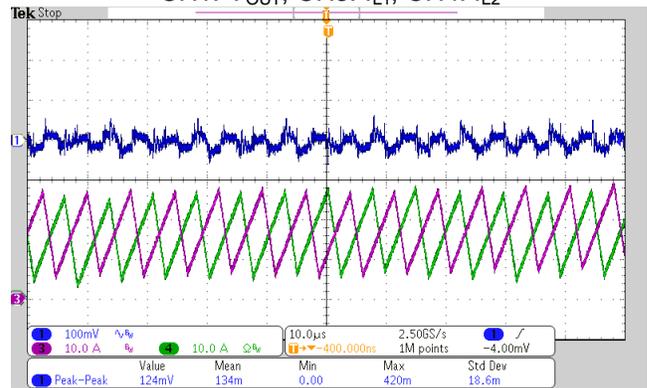

12V input, 46V 400W load
